Ref. No CWA 13937-4:2000 E

Foreword

This CWA contains the specifications that define the J/eXtensions for Financial Services (J/XFS) for the Java TM Platform, as developed by the J/XFS Forum and endorsed by the CEN/ISSS J/XFS Workshop. J/XFS provides an API for Java applications which need to access financial devices. It is hardware independent and, by using 100% pure Java, also operating system independent.

The CEN/ISSS J/XFS Workshop gathers suppliers (among others the J/XFS Forum members), service providers as well as banks and other financial service companies. A list of companies participating in this Workshop and in support of this CWA is available from the CEN/ISSS Secretariat. The specification was agreed upon by the J/XFS Workshop Meeting of 1999-12-15/16 in Geneva and a subsequent electronic review by the Workshop participants, and the final version was sent to CEN for publication on 2000/06-21.

The specification is continuously reviewed and commented in the CEN/ISSS J/XFS Workshop. It is therefore expected that an update of the specification will be published in due time as a CWA, superseding this one. The information published in this CWA is furnished for informational purposes only. CEN/ISSS makes no warranty expressed or implied, with respect to this document. Updates of the specification will be available from the CEN/ISSS J/XFS Workshop public web pages pending their integration in a new version of the CWA (see: http://www.cenorm.be/isss/workshop/j-XFS/cwa-updates).

The J/XFS specifications are now further developed in the CEN/ISSS J/XFS Workshop. CEN/ISSS Workshops are open to all interested parties offering to contribute. Parties interested in participating should contact the CEN/ISSS Secretariat (isss@cenorm.be). To submit questions and comments for the J/XFS specifications, please contact the CEN/ISSS Secretariat (isss@cenorm.be) who will be forwarding them to the J/XFS Workshop.

Questions and comments can also be submitted to the members of the J/XFS Forum, who are all CEN/ISSS J/XFS Workshop members, through the J/XFS Forum web-site http:///www.jxfs.com

This CWA is composed of the following parts:

- Part 1: J/eXtensions for Financial Services (J/XFS) for the Java Platform Base Architecture Programmer's Reference
- Part 2: J/eXtensions for Financial Services (J/XFS) for the Java Platform Pin Keypad Device Class Interface - Programmer's Reference
- Part 3: J/eXtensions for Financial Services (J/XFS) for the Java Platform Magnetic Stripe & Chip Card Device Class Interface Programmer's Reference
- Part 4: J/eXtensions for Financial Services (J/XFS) for the Java Platform Text Input/Output Device Class Interface Programmer's Reference
- Part 5: J/eXtensions for Financial Services (J/XFS) for the Java Platform Cash Dispenser, Recycler and ATM Interface Programmer's Reference
- Part 6: J/eXtensions for Financial Services (J/XFS) for the Java Platform Printer Device Class Interface Programmer's Reference
- Part 7: J/eXtensions for Financial Services (J/XFS) for the Java Platform Alarm Device Programmer's Reference
- Part 8: J/eXtensions for Financial Services (J/XFS) for the Java Platform Sensors and Indicators Unit Device Class Interface Programmer's Reference
- Part 9: J/eXtensions for Financial Services (J/XFS) for the Java Platform Depository Device Class Interface - Programmer's Reference
- Part 10: J/eXtensions for Financial Services (J/XFS) for the Java Platform Check Reader/Scanner Device Class Interface - Programmer's Reference

1 Scope

This document describes the Text Input / Output Device Class (TIO) based on the basic architecture of J/XFS which is similar to the JavaPOS architecture. It is event driven and asynchronous.

Three basic levels are defined in JavaPOS. For J/XFS this model is extended by a communication layer, which provides device communication that allows distribution of applications and devices within a network. So we have the following layers in J/XFS:

- Application
- Device Control and Manager
- Device Communication
- Device Service

Application developers program against control objects and the Device Manager which reside in the Device Control Layer. This is the usual interface between applications and J/XFS Devices. Device Control Objects access the Device Manager to find an associated Device Service. Device Service Objects provide the functionality to access the real device (i.e. like a device driver).

During application startup the Device Manager is responsible for locating the desired Device Service Object and attaching this to the requesting Device Control Object. Location and/or routing information for the Device Manager reside in a central repository.

To support Text I/O Devices, the basic Device Control structure is extended with various properties and methods specific to this device which are described on the following pages.

2 Overview

2.1 Description

The Text Input Output Device Control class, defined in the JxfsTIO class, is a subclass of the JxfsBaseControl class. Its interface is defined in the IJxfsTIOControl class which is a subclass of the IJxfsBaseControl class. The intended use of an Text Input Output object is to allow data and control to be passed between a Java application or applet and a TIO type device so that the associated device can be accessed through a "Pure Java" platform.

As stated previously, the Text Input Output Device Control class allows access to TIO type devices. An overview of the device operation is described in this section from the point of view of the application or applet (referred to as just an application).

An application will instantiate a JxfsTIO object and then use the available methods to do I/O. If an error occurs in initiating the I/O, an JxfsException will be thrown. The application should be designed to catch and handled the errors thrown. Otherwise, control will be returned to the application and an JxfsEvent will be used to signal I/O completion asynchronous to the invoking applications thread of execution.

As a result of the event based I/O operation model, an application will have to register itself as a listener with the JxfsTIO object for the event(s) generated.

This document describes the input and output features of the TIO. It offers the functionality of a text display, a set of LED's and a beep mechanism. In addition function keys and a tiny keyboard are also supported.

2.2 Classes and Interfaces

Class or interface	Name	Description	Extends / Implements
Interface	IJxfsBaseControl	Base interface for all device controls. Contains methods specific to all the device controls.	_
Class	JxfsBaseControl	Base class for all device controls. Implements methods common for all devices.	
Interface	IJxfsTIOControl	Base interface for all Text Input/Output controls. Contains the methods specific to all the device controls for the Text Input/Output device category.	Extends: IJxfsBaseControl
Interface	IJxfsTIOService	Base interface for all Text Input/Output services. Contains the methods specific to all the device services for the Text Input/Output device category.	Extends: IJxfsBaseService
Class	JxfsTIO	Base class for all Text Input/Output controls Implements the methods defined in the IJxfsTIOControl Interface. Contains the properties specific to all Text Input/Output device controls.	Extends: JxfsBaseControl Implements: IJxfsTIOControl

2.3 Support Classes

Class or	Name	Description	Extends /	
interface			Implements	
Interface	JxfsConst	Interface containing the		
		J/XFS constants that are		
		common to several device		
		categories		
Interface	JxfsTIOConst	Interface containing the		
		J/XFS constants that are		
		common to all the Text		
		Input/Output device		
		controls.		
Class	JxfsTIOStatus	Describes the TIO specific	Extends:	
		status information.	JxfsStatus	
Class	JxfsTIOResolution	Keeps the resolution (in	Extends:	
		characters per row and	JxfsType	
		column).		

3 Device behavior

3.1 Device open()

During the device open call the Device Service tries to access the connected device. This fails for the following circumstances:

JXFS_E_HARDWAREERROR	If the device could not be accessed. This may be that
	the device is not connected or broken.
JXFS_E_OPEN	The open was already done by this Device Control.

4 Classes and Interfaces

4.1 Text Input/Output Interface IJxfsTIOControl

4.1.1 Introduction

The J/XFS Text Input/Output Device Control interface is defined in IJxfsTIOControl and extends of IJxfsBaseControl. The intent of the J/XFS Text Input/Output Device Control object is to allow data and control to pass between the application and the device support code so that the associated device can be accessed.

4.1.2 Summary

Please note the following when determining the meaning of a property's

Access:

R The property is read only.

W The property is write only.

R/W The property may be read or written.

To read or write a property send the J/XFS Text Input/Output Device Control object the appropriate JavaBeans conform method.

The length associated with each property's data is determined by the property type.

Extends: IJxfsTIOControl

Properties

Troperties				
Property	Type	Access	Initialized by	
cursor	boolean	R	device service	
status	JxfsTIOStatus	R	device service	
resolution	JxfsTIOResolution	R/W	device service	
availableResolutions	Vector	R	device service	
displayLight	boolean	R	device service	
beep	boolean	R	device service	
maxLED	int	R	device service	
keyboard	boolean	R	device service	
keyboardLock	boolean	R	device service	

The common exceptions thrown by all property methods are:

Value	Meaning
JXFS_E_CLOSED	The Device Control has not been opened.
JXFS_E_UNREGISTERED	The device is not registered at the JxfsDeviceManager
JXFS E REMOTE	A network error occurred

Methods

Method	Return	Meaning	
beep	int	Sounds a beep signal.	
lightDisplay	int	Lights the text display.	
setLED	int	Lights the specified LED.	
getLED	int	Gets the current light type of	
		specified LED.	
clearScreen	int	Clears display screen.	
writeDisplayData	int	Writes data on display.	
isTextAttributeSupported	boolean	Detects supported text attributes.	
readKeyboardData	int	Reads pressed keys.	

The common exceptions thrown by all methods are:

The common enceptions thrown of an incinous are.			
Value	Meaning		
JXFS_E_CLOSED	The Device Control has not been opened.		
JXFS_E_UNREGISTERED	The device is not registered at the		
	JxfsDeviceManager		
JXFS_E_REMOTE	A network error occurred		
JXFS_E_PARAMETER_INVALID	Parameter passed to method is invalid.		
JXFS_E_NOT_SUPPORTED	Method is not supported.		

4.1.3 Properties

cursor Property R

Type boolean **Initial Value** -

Description Specifies whether the Text Input Output device has a display cursor. The

value can be true or false depending on the characteristics of the display.

Method *isCursorSupported()*

Events No additional events generated. **Exceptions** No additional exceptions thrown.

status Property R

Type JxfsTIOStatus

Initial Value

Description Depending on the state of the Text Input Output device, the status object will

be updated. For details on JxfsTIOStatus please see the appropriate section.

Method getStatus()

Events If the values of these properties kept by the status object changes the device

service will send all registered StatusListeners a StatusEvent with *status* = JXFS_S_TIO_STATUS_CHANGED. The status object is attached in the

details field.

Exceptions No additional exceptions thrown.

resolution Property R/W

Type *JxfsTIOResolution*

Initial Value -

Description Specifies the horizontal and vertical size of the display in character columns

and rows. If no resolution is set or an unsupported resolution is specified the default resolution will be used. After redefining resolution and before displaying a new text the display should be cleared to assure proper text

output.

Method getResolution(), setResolution(JxfsTIOResolution res)

Events No additional events generated.Exceptions No additional exceptions thrown.

availableResolutions R

Type Vector **Initial Value** -

Description Specifies available display resolutions. All resolutions are kept in a Vector

consisting of JxfsTIOResolution objects.

MethodgetAvailableResolution()EventsNo additional events generated.ExceptionsNo additional exceptions thrown.

displayLight Property R

Type boolean Initial Value -

Description Specifies whether the Text Input Output device supports display light. The

value can be true or false depending on the characteristics of the device.

MethodisDisplayLightSupported ()EventsNo additional events generated.ExceptionsNo additional exceptions thrown.

beep Property R

Type boolean Initial Value -

Description Specifies whether the Text Input Output device supports beeping. The value

can be true or false depending on the characteristics of the device.

Method isBeepSupported()

Events No additional events generated.Exceptions No additional exceptions thrown.

maxLED Property R

Type int Initial Value -

Description Specifies the number of LED's supported by the Text Input Output device.

Method *getMaxLED()*

Events No additional events generated.Exceptions No additional exceptions thrown.

keyboard Property R

Type boolean Initial Value -

Description Specifies if a keyboard is supported. The value is *true* if available, *false*

otherwise.

MethodisKeyboardSupported ()EventsNo additional events generated.ExceptionsNo additional exceptions thrown.

keyboardLock Property R

Type boolean Initial Value -

Description Specifies if a keyboardLock is supported. The value is *true* if available,

false otherwise.

MethodisKeyboardLockSupported ()EventsNo additional events generated.ExceptionsNo additional exceptions thrown.

4.1.4 Methods

beep() Method

Syntax int beep(int beepValue, int time) throws JxfsException;

Description This method can be used to set the conditions for sounding a beep (in case of _BEEP_KEYPRESS) or for actually sounding a beep. Returns an

identificationID that identifies this operation.

beepValue can be one of the following:

Value Meaning

JXFS_TIO_BEEP_OFF

JXFS_TIO_BEEP_KEYPRESS

The beeper is turned off.

The beeper will sound on key

press.

JXFS_TIO_BEEP_CONTINUOUS The beeper sounds

continuously.

JXFS_TIO_BEEP_EXCLAMATION The beeper sounds an

exclamation signal.

JXFS_TIO_BEEP_WARNING The beeper sounds an warning

signal.

JXFS_TIO_BEEP_ERROR The beeper sounds an error

signal.

JXFS_TIO_BEEP_CRITICAL The beeper sounds an critical

error signal.

time in milliseconds. If the value is greater than zero the TIO will beep for the specified time. If equal to JXFS_FOREVER, beeping is performed forever. If *beep()* is called a second time the current beeping ends always immediately (e.g. with *beepValue* equal to JXFS_TIO_BEEP_OFF or with a new specified time).

Events

OperationCompleteEvent This method requires I/O. Upon successful completion it will result in an OperationCompleteEvent having a status value of:

FieldValue & MeaningoperationIDJXFS_O_TIO_BEEP

identificationId The corresponding Id for the completed operation.

result JXFS_RC_SUCCESSFUL

The operation was completed with success.

JXFS_E_CANCELLED
The operation was cancelled.

JXFS_E_TIO_BEEP

Indicates the operation completed with an error.

data JxfsType object equals null

Exceptions No additional exceptions thrown.

lightDisplay() Method

Syntax int lightDisplay(boolean on) throws JxfsException;

Description This method can be used to switch display lighting on (*on* equals true) or off

(on equals false). Returns an identificationID that identifies this operation.

Events

OperationCompleteEvent This method requires I/O. Upon successful completion it will result in an OperationCompleteEvent having a status value of:

Field Value & Meaning
operationID JXFS_O_TIO_LIGHT

identificationId The corresponding Id for the completed operation.

result JXFS_RC_SUCCESSFUL

The operation was completed with success.

JXFS_E_CANCELLED The operation was cancelled.

JXFS_E_TIO_LIGHT

Indicates the operation completed with an error.

data JxfsType object equals null

Exceptions No additional exceptions thrown.

setLED() Method

Syntax int setLED(int index, int type) throws JxfsException;

Description This method can be used for lighting a LED. It returns an identificationID

> that identifies this operation. type can be one of the following:

Value Meaning The LED is turned off. JXFS_TIO_LED_OFF JXFS_TIO_LED_CONTINUOUS The LED is turned on continuously.

The LED is set to flash JXFS_TIO_LED_SLOWFLASH

slowly.

JXFS_TIO_LED_MEDIUMFLASH The LED is blinking medium

frequency.

JXFS_TIO_LED_QUICKFLASH The LED is set to flash

quickly.

index Specifies which LED to light. If it is equal to a value from 1 to maxLED() the LED with the appropriate index will be lighted. In addition to specifying the number of the LED it can be equal to one of the following values:

Value	Meaning
JXFS_TIO_LED_ERROR	The error LED will be lighted.
JXFS_TIO_LED_WARNING	The warning LED will be lighted.
JXFS_TIO_LED_ONLINE	The online LED will be lighted.
JXFS_TIO_LED_OFFLINE	The offline LED will be lighted (or
	the online LED turns off).
JXFS_TIO_LED_NORMAL	Indicates proper working of the
	device
JXFS_TIO_LED_PAPERLOW	The paper low LED will be lighted.
JXFS_TIO_LED_PAPEREMPTY	The paper empty LED will be
	lighted.
JXFS_TIO_LED_PAPERJAM	The paper jam LED will be lighted.
JXFS_TIO_LED_TONERLOW	The toner low LED will be lighted.
JXFS_TIO_LED_TONEREMPTY	The toner empty LED will be

Events

OperationCompleteEvent This method requires I/O. Upon successful completion it will

result in an OperationCompleteEvent having a status value of:

Field Value & Meaning operationID JXFS_O_TIO_LED identificationId

The corresponding Id for the completed operation.

JXFS_RC_SUCCESSFUL result

The operation was completed with success.

lighted.

JXFS_E_CANCELLED The operation was cancelled.

JXFS_E_TIO_LED

Indicates the operation completed with an error.

data JxfsType object equals null

Exceptions No additional exceptions thrown.

getLED() Method

Syntax int getLED(int index) throws JxfsException;

Description This method can be used to query the current lighting of an LED. Returns a

type code specifying the lightning status. Throws an exception

JXFS_E_PARAMETER_INVALID.

The returned integer is one of the following:

Value Meaning

JXFS_TIO_LED_OFF The LED is turned off. JXFS_TIO_LED_CONTINUOUS The LED is turned on

continuously.

JXFS_TIO_LED_SLOWFLASH The LED is set to flash

slowly.

JXFS_TIO_LED_MEDIUMFLASH The LED is blinking medium

frequency.

JXFS_TIO_LED_QUICKFLASH The LED is set to flash

quickly.

clearScreen() Method

Syntax int clearScreen(int positionX, int positionY, int width,

int height) throws JxfsException;

Description This method can be used to clear the display screen. All parameters are in

column positions. Returns an identification ID that identifies this operation.

positionY specifies the starting horizontal position of the area to be cleared. specifies the starting vertical position of the area to be cleared.

width specifies the horizontal width of the area to be cleared.height specifies the vertical height of the area to be cleared.

Events

OperationCompleteEvent This method requires I/O. Upon successful completion it

will result in an OperationCompleteEvent having a status value of:

Field Value & Meaning operationID JXFS_O_TIO_CLEAR

identificationId The corresponding Id for the completed operation.

result JXFS_RC_SUCCESSFUL

The operation was completed with success.

JXFS_E_CANCELLED
The operation was cancelled.
JXFS E TIO CLEAR

Indicates the operation completed with an error.

data JxfsType object equals null

Exceptions No additional exceptions thrown.

writeDisplayData() Method

Syntax int writeDisplayData(int mode, int posX, int posY,

int textAttr, String text) throws JxfsException;

Description This method can be used to write text to the display. The text is wrapped

automatically on the end of the line, except on the last one, where text is truncated. Returns an identificationID that identifies this operation.

mode Specifies the mode of text positioning. It can be one of the following:

Value Meaning

JXFS_TIO_POS_RELATIVE The text is positioned relative

to current position.

JXFS_TIO_POS_ABSOLUTE The text is positioned to an

absolute position.

posX Specifies the starting horizontal position to display the text. This will be an

offset from the current position for relative mode and a position value for

absolute mode, where value 1 means the most left position.

posY Specifies the starting vertical position to display the text. This will be an

offset from the current position for relative mode and a position value for

absolute mode, where value 1 means the most top position.

textAttr Specifies the text attributes of the text being displayed. It can have a

combination of the following values:

Value Meaning

JXFS_TIO_TEXT_NORMAL

JXFS_TIO_TEXT_UNDERLINED

JXFS_TIO_TEXT_INVERTED

The normal text display.

The text is underlined.

The text is displayed light on

black.

JXFS_TIO_TEXT_FLASH The text is displayed flashing.

If one of the modi mentioned above is not supported, another best matching mode is selected. The values can also be combined (i.e. underline and inverted). This is achieved by OR'ing the corresponding values.

Specifies the text to be displayed.

text Events

OperationCompleteEvent This method requires I/O. Upon successful completion it

will result in an OperationCompleteEvent having a status value of:

Field Value & Meaning operationID JXFS_O_TIO_DISPLAY

identificationId The corresponding Id for the completed operation.

result JXFS_RC_SUCCESSFUL

The operation was completed with success.

JXFS_E_CANCELLED
The operation was cancelled.
JXFS_E_TIO_DISPLAY

Indicates the operation completed with an error.

data JxfsType object equals null

Exceptions No additional exceptions thrown.

readKeyboardData() Method

Syntax int readKeyboardData(int numOfChars, int mode, int posX,

int posY, int echoMode, int echoAttr, int keys, boolean cursor,

boolean flush, boolean autoEnd) throws JxfsException

Description This method can be used to read unformatted text from the keyboard. When

complete a Vector containing the keys pressed will be placed in the *data* field of an OperationCompleteEvent and all OperationCompleteListeners will be notified. Returns an identificationID that identifies this operation.

numOfChars Specifies the number of characters to be read from the keyboard.mode Specifies the mode of text positioning. It can be one of the following:

Value Meaning

JXFS_TIO_POS_RELATIVE The text is positioned relative

to current position.

JXFS_TIO_POS_ABSOLUTE The text is positioned to an

absolute position.

posX Specifies the starting horizontal position to display the text. This will be an

offset from the current position for relative mode and a position value for

absolute mode.

posY Specifies the starting vertical position to display the text. This will be an

offset from the current position for relative mode and a position value for

absolute mode.

echoMode Specifies the text attributes of the input being echoed. It can have one of the

following values:

Value Meaning

JXFS_TIO_ECHO_TEXT The input will be echoed.

JXFS_TIO_ECHO_INVISIBLE The input will not be echoed.

JXFS_TIO_ECHO_PASSWORD The input will echo a replacement character.

echoAttr

keys

Specifies the text attributes of the text being echoed. It can have a combination of the following values:

Value Meaning

JXFS_TIO_TEXT_NORMAL The normal text display. JXFS_TIO_TEXT_UNDERLINED The text is underlined. JXFS_TIO_TEXT_INVERTED The text is displayed light on

black.

The text is displayed flashing. JXFS_TIO_TEXT_FLASH

If one of the modi mentioned above is not supported, another best matching mode is selected. The values can also be combined (i.e. underline and inverted). This is achieved by OR'ing the corresponding values.

Specifies what types of keys the keyboard of the Text Input Output device will allow for input. It may have a value of a combination of the following:

Value Meaning

JXFS TIO_KEY_NUMERIC The TIO has numeric keys. JXFS_TIO_KEY_HEXADECIMAL The TIO has hexadecimal

keys.

JXFS_TIO_KEY_ALPHANUMERIC The TIO has alphanumeric

keys.

JXFS_TIO_KEY_FUNCTION The TIO has function keys. The values can also be combined. This is achieved by OR'ing the

corresponding values.

Specifies whether the Text Input Output device will display a cursor. The cursor

> value can be true or false depending on the characteristics of the display. Specifies whether the Text Input Output device will be cleared before input

is allowed.

autoEnd Specifies whether input is automatically ended by Device Services when the

value given in numOfChars is met. If this is false the input is only ended by pressing the Enter key. The return code is the always successful, even if the

numOfChars value specified is not correct.

Events

flush

OperationCompleteEvent When a readKeyboardData() operation is completed a

OperationCompleteEvent will be sent by the J/XFS TIO Device Control to all registered OperationCompleteListeners. The OperationCompleteEvent will contain the following:

Field Value & Meaning operationID JXFS_O_TIO_READ

identificationId The corresponding Id for the completed operation.

result JXFS_RC_SUCCESSFUL

> The operation was completed with success. Only now the data field is filled with the keys pressed.

JXFS_E_CANCELLED The operation was cancelled. JXFS_E_TIO_READ

Indicates the operation completed with an error.

data A Vector containing the keys read. This does not

contain the final Enter or any Delete keys pressed

in between.

The following keys are supported:	
Value	Meaning
JXFS_TIO_KEY_0 9	The numeric keys.
JXFS_TIO_KEY_A F	The hexadecimal keys.
JXFS_TIO_KEY_DOT	The (.) sign.
JXFS_TIO_KEY_COMMA	The (,) sign.
JXFS_TIO_KEY_SEMICOLON	The (;) sign.
JXFS_TIO_KEY_FENCE	The (#) sign.
JXFS_TIO_KEY_MULTI	The (*) sign.
JXFS_TIO_KEY_SLASH	The (/) sign.
JXFS_TIO_KEY_PLUS	The (+) sign.

JXFS_TIO_KEY_MINUS The (-) sign.
JXFS_TIO_KEY_F1 ... F10 The function keys.

Exceptions No additional exceptions thrown.

isTextAttributeSupported() Method

Syntax boolean is TextAttribute Supported (int textAttr) throws JxfsException;

Description This method is used to detect supported text attributes.

textAttr Specifies the text attribute the method is detecting. It can have a combination

of the following values:

Value Meaning

JXFS_TIO_TEXT_UNDERLINED The text is underlined.

JXFS_TIO_TEXT_INVERTED The text is displayed light on

black.

JXFS_TIO_TEXT_FLASH The text is displayed flashing.

Events No additional events generated.Exceptions No additional exceptions thrown.

4.2 Text Input / Output Interface IJxfsTIOService

The Device Service interface is common for all device services of this device type. It is used by the Device Controls to access the functionality of the device. This interface has to be implemented by any J/XFS Device Service.

The device type specific Device Service interface is similar to the Device Control interface. All device specific method calls are extended by an additional parameter (int control_id). This is always added as the last parameter in every operation.

4.3 Text Input/Output Class JxfsTIO

This class is the implementation of the interface IJxfsTIOInterface.

4.4 JxfsTIOStatus Class

4.4.1 Introduction

All TIO specific status informations are kept in the JxfsTIOStatus object, that can be queried by using the *getStatus()* method of the JxfsTIO class.

4.4.2 Summary

Extends: JxfsStatus

Type	Access	Initialized by
constructor		-
void		sets the corresponding property
boolean	R	device service
	constructor void boolean boolean boolean	constructor void boolean R boolean R boolean R

The constructor initializes all members to false.

4.4.3 Properties

online Property RW

Type boolean

Initial Value -

Description Returns true if the device is online, false if not.

MethodisOnline(), setOnline(boolean value)EventsNo additional events generated.ExceptionsNo additional exceptions thrown.

devicePresent Property RW

Type boolean

Initial Value -

Description Returns true if the device is attached to workstation and the power is on,

false if not.

Method is DevicePresent(), setDevicePresent(boolean value)

Events No additional events generated.Exceptions No additional exceptions thrown.

keyboardOn Property RW

Type boolean Initial Value -

Description Returns true if the keyboard is activated, false if not. **Method** *isKeyboardOn(), setKeyboardOn(boolean value)*

Events No additional events generated.Exceptions No additional exceptions thrown.

keyboardLockOn Property RW

Type boolean

Initial Value -

Description Returns true if the keyboard lock is activated, false if not. **Method** is KeyboardLockOn(), setKeyboardLockOn(boolean value)

Events No additional events generated.Exceptions No additional exceptions thrown.

4.5 JxfsTIOResolution Class

4.5.1 Introduction

This class keeps the resolution of the text display. The resolution is described as the number of characters that can be diplayed per row and column.

4.5.2 Summary

Extends: JxfsType

Property	Туре	Access	Initialized by
JxfsTIOResolution(int columns, int rows)	constructor		-
setProperty(int value)	void		sets the corresponding property
columns	int	RW	device service
rows	int	RW	device service

4.5.3 Properties

columns Property RW

Type int Initial Value -

Description Returns the number of character per column.

Events No additional events generated. **Exceptions** No additional exceptions thrown.

rows Property RW

Type int **Initial Value** -

Description Returns the number of characters per row.

Events No additional events generated.Exceptions No additional exceptions thrown.

4.6 JxfsTIOConst Interface

4.6.1 Introduction

This interface defines all TIO specific constants. For common constants please refer to the J/XFS Base Architecture.

4.6.2 Constants

Device specific operationID sent with events:

Value	Meaning
JXFS_O_TIO_BEEP	Indicates the <i>beep</i> operation completed
	with an error.
JXFS_O_TIO_LIGHT	Indicates the <i>lightDisplay</i> operation
	completed with an error.
JXFS_O_TIO_LED	Indicates the <i>setLED</i> operation completed
	with an error.
JXFS_O_TIO_DISPLAY	Indicates the writeDisplayData operation
	completed with an error.
JXFS_O_TIO_READ	Indicates the <i>readKeyboardData</i> operation
	completed with an error.
JXFS_O_TIO_CLEAR	Indicates the <i>clearScreen</i> operation
	completed with an error.

Status Event codes:

Value	Meaning
JXFS_S_TIO_STATUS_CHANGED	The status has changed.

Device specific error codes:

Value	Meaning
JXFS_E_TIO_BEEP	Indicates the <i>beep</i> operation completed
	with an error.
JXFS_E_TIO_LIGHT	Indicates the <i>lightDisplay</i> operation
	completed with an error.
JXFS_E_TIO_LED	Indicates the <i>setLED</i> operation completed
	with an error.
JXFS_E_TIO_DISPLAY	Indicates the writeDisplayData operation
	completed with an error.
JXFS_E_TIO_READ	Indicates the <i>readKeyboardData</i> operation
	completed with an error.
JXFS_E_TIO_CLEAR	Indicates the <i>clearScreen</i> operation
	completed with an error.

Method specific constants:

Value	Meaning
JXFS_TIO_BEEP_OFF	The beeper is turned off.
JXFS_TIO_BEEP_KEYPRESS	The beeper will sound on key press.
JXFS_TIO_BEEP_CONTINUOUS	The beeper sounds continuously.
JXFS_TIO_BEEP_EXCLAMATION	The beeper sounds an exclamation signal.
JXFS_TIO_BEEP_WARNING	The beeper sounds an warning signal.
JXFS_TIO_BEEP_ERROR	The beeper sounds an error signal.
JXFS_TIO_BEEP_CRITICAL	The beeper sounds an critical error signal.

Value	Meaning
JXFS_TIO_LED_OFF	The LED is turned off.
JXFS_TIO_LED_CONTINUOUS	The LED is turned on continuously.
JXFS_TIO_LED_SLOWFLASH	The LED is set to flash slowly.
JXFS_TIO_LED_MEDIUMFLASH	The LED is blinking medium frequency.
JXFS_TIO_LED_QUICKFLASH	The LED is set to flash quickly.
JXFS_TIO_LED_ERROR	The error LED will be lighted.
JXFS_TIO_LED_WARNING	The warning LED will be lighted.
JXFS_TIO_LED_ONLINE	The online LED will be lighted.
JXFS_TIO_LED_OFFLINE	The offline LED will be lighted (or the
	online LED turns off).
JXFS_TIO_LED_NORMAL	Indicates proper working of the device
JXFS_TIO_LED_PAPERLOW	The paper low LED will be lighted.
JXFS_TIO_LED_PAPEREMPTY	The paper empty LED will be lighted.
JXFS_TIO_LED_PAPERJAM	The paper jam LED will be lighted.
JXFS_TIO_LED_TONERLOW	The toner low LED will be lighted.
JXFS_TIO_LED_TONEREMPTY	The toner empty LED will be lighted.

Value	Meaning
JXFS_TIO_POS_RELATIVE	The text is positioned relative to current
	position.
JXFS_TIO_POS_ABSOLUTE	The text is positioned to an absolute
	position.

Value	Meaning
JXFS_TIO_TEXT_NORMAL	Normal text.
JXFS_TIO_TEXT_UNDERLINED	The text is underlined.
JXFS_TIO_TEXT_INVERTED	The text is displayed light on black.
JXFS_TIO_TEXT_FLASH	The text is displayed flashing.

The above values are combinable (bitwise OR-able).

Value	Meaning
JXFS_TIO_ECHO_TEXT	The input will be echoed.
JXFS_TIO_ECHO_INVISIBLE	The input will not be echoed.
JXFS_TIO_ECHO_PASSWORD	The input will echo a replacement
	character.

Keyboard data capabilities

ne, sour a data capasimires	
Value	Meaning
JXFS_TIO_KEY_NUMERIC	The TIO has numeric keys.
JXFS_TIO_KEY_HEXADECIMAL	The TIO has hexadecimal keys.
JXFS_TIO_KEY_ALPHANUMERIC	The TIO has alphanumeric keys.
JXFS_TIO_KEY_FUNCTION	The TIO has function keys.

The above values are combinable (bitwise OR-able).

Keyboard data output key definitions

Value	Meaning
JXFS_TIO_KEY_0 9	The numeric keys.
JXFS_TIO_KEY_A F	The hexadecimal keys.
JXFS_TIO_KEY_DOT	The (.) sign.
JXFS_TIO_KEY_COMMA	The (,) sign.
JXFS_TIO_KEY_SEMICOLON	The (;) sign.
JXFS_TIO_KEY_FENCE	The (#) sign.
JXFS_TIO_KEY_MULTI	The (*) sign.
JXFS_TIO_KEY_SLASH	The (/) sign.
JXFS_TIO_KEY_PLUS	The (+) sign.
JXFS_TIO_KEY_MINUS	The (-) sign.
JXFS_TIO_KEY_DELETE	The delete key.
JXFS_TIO_KEY_CANCEL	The cancel key.
JXFS_TIO_KEY_ENTER	The enter key.
JXFS_TIO_KEY_F1 F10	The function keys.
