July 2008

WORKSHOP

AGREEMENT

ICS 35.240.50

English version

Extensions for Financial Services (XFS) interface specification -Release 3.10 - Part 64: Cash Dispenser Device Class Interface -Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

This CEN Workshop Agreement has been drafted and approved by a Workshop of representatives of interested parties, the constitution of which is indicated in the foreword of this Workshop Agreement.

The formal process followed by the Workshop in the development of this Workshop Agreement has been endorsed by the National Members of CEN but neither the National Members of CEN nor the CEN Management Centre can be held accountable for the technical content of this CEN Workshop Agreement or possible conflicts with standards or legislation.

This CEN Workshop Agreement can in no way be held as being an official standard developed by CEN and its Members.

This CEN Workshop Agreement is publicly available as a reference document from the CEN Members National Standard Bodies.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This CWA is revision 3.10 of the XFS interface specification.

The CEN/ISSS XFS Workshop gathers suppliers as well as banks and other financial service companies. A list of companies participating in this Workshop and in support of this CWA is available from the CEN/ISSS Secretariat.

This CWA was formally approved by the XFS Workshop meeting on 2007-11-29. The specification is continuously reviewed and commented in the CEN/ISSS Workshop on XFS. It is therefore expected that an update of the specification will be published in due time as a CWA, superseding this revision 3.10.

The CWA is published as a multi-part document, consisting of:

Part 1: Application Programming Interface (API) - Service Provider Interface (SPI) - Programmer's Reference

Part 2: Service Classes Definition - Programmer's Reference

Part 3: Printer and Scanning Device Class Interface - Programmer's Reference

Part 4: Identification Card Device Class Interface - Programmer's Reference

Part 5: Cash Dispenser Device Class Interface - Programmer's Reference

Part 6: PIN Keypad Device Class Interface - Programmer's Reference

Part 7: Check Reader/Scanner Device Class Interface - Programmer's Reference

Part 8: Depository Device Class Interface - Programmer's Reference

Part 9: Text Terminal Unit Device Class Interface - Programmer's Reference

Part 10: Sensors and Indicators Unit Device Class Interface - Programmer's Reference

Part 11: Vendor Dependent Mode Device Class Interface - Programmer's Reference

Part 12: Camera Device Class Interface - Programmer's Reference

Part 13: Alarm Device Class Interface - Programmer's Reference

Part 14: Card Embossing Unit Device Class Interface - Programmer's Reference

Part 15: Cash-In Module Device Class Interface - Programmer's Reference

Part 16: Card Dispenser Device Class Interface - Programmer's Reference

Part 17: Barcode Reader Device Class Interface - Programmer's Reference

Part 18: Item Processing Module Device Class Interface- Programmer's Reference

Parts 19 - 28: Reserved for future use.

Parts 29 through 47 constitute an optional addendum to this CWA. They define the integration between the SNMP standard and the set of status and statistical information exported by the Service Providers.

Part 29: XFS MIB Architecture and SNMP Extensions - Programmer's Reference

Part 30: XFS MIB Device Specific Definitions - Printer Device Class

Part 31: XFS MIB Device Specific Definitions - Identification Card Device Class

Part 32: XFS MIB Device Specific Definitions - Cash Dispenser Device Class

Part 33: XFS MIB Device Specific Definitions - PIN Keypad Device Class

Part 34: XFS MIB Device Specific Definitions - Check Reader/Scanner Device Class

Part 35: XFS MIB Device Specific Definitions - Depository Device Class

Part 36: XFS MIB Device Specific Definitions - Text Terminal Unit Device Class

Part 37: XFS MIB Device Specific Definitions - Sensors and Indicators Unit Device Class

Part 38: XFS MIB Device Specific Definitions - Camera Device Class

Part 39: XFS MIB Device Specific Definitions - Alarm Device Class

Part 40: XFS MIB Device Specific Definitions - Card Embossing Unit Class

Part 41: XFS MIB Device Specific Definitions - Cash-In Module Device Class

Part 42: Reserved for future use.

Part 43: XFS MIB Device Specific Definitions - Vendor Dependent Mode Device Class

Part 44: XFS MIB Application Management

Part 45: XFS MIB Device Specific Definitions - Card Dispenser Device Class

Part 46: XFS MIB Device Specific Definitions - Barcode Reader Device Class

Part 47: XFS MIB Device Specific Definitions - Item Processing Module Device Class

Parts 48 - 60 are reserved for future use.

Part 61: Application Programming Interface (API) - Service Provider Interface (SPI) - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 62: Printer Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 63: Identification Card Device Class Interface - Migration from Version 3.02 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 64: Cash Dispenser Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 65: PIN Keypad Device Class Interface - Migration from Version 3.03 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 66: Check Reader/Scanner Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 67: Depository Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 68: Text Terminal Unit Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 69: Sensors and Indicators Unit Device Class Interface - Migration from Version 3.01 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 70: Vendor Dependent Mode Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 71: Camera Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 72: Alarm Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 73: Card Embossing Unit Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 74: Cash-In Module Device Class Interface - Migration from Version 3.02 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

In addition to these Programmer's Reference specifications, the reader of this CWA is also referred to a complementary document, called Release Notes. The Release Notes contain clarifications and explanations on the CWA specifications, which are not requiring functional changes. The current version of the Release Notes is available online from <u>http://www.cen.eu/isss/Workshop/XFS</u>.

The information in this document represents the Workshop's current views on the issues discussed as of the date of publication. It is furnished for informational purposes only and is subject to change without notice. CEN/ISSS makes no warranty, express or implied, with respect to this document.

This CEN Workshop Agreement is publicly available as a reference document from the National Members of CEN : AENOR, AFNOR, ASRO, BDS, BSI, CSNI, CYS, DIN, DS, ELOT, EVS, IBN, IPQ, IST, LVS, LST, MSA, MSZT, NEN, NSAI, ON, PKN, SEE, SIS, SIST, SFS, SN, SNV, SUTN and UNI.

Comments or suggestions from the users of the CEN Workshop Agreement are welcome and should be addressed to the CEN Management Centre.

1. Migration Information

XFS 3.10 has been designed to minimize backwards compatibility issues. This document highlights the changes made to the CDM device class between version 3.0 and 3.10, by highlighting the additions and deletions to the text.

2. Cash Dispensers

This specification describes the functionality of a XFS compliant Cash Dispenser Module (CDM) Service Provider. It defines the service-specific commands that can be issued to the Service Provider using the **WFSGetInfo**, **WFSAsyncGetInfo**, **WFSAsyncGetInfo**, **WFSAsyncExecute** functions.

Persistent values are maintained through power failures, open sessions, close session and system resets.

This specification covers the dispensing of items. An "item" is defined as any media that can be dispensed and includes coupons, documents, bills and coins. However, if coins and bills are both to be dispensed separate Service Providers must be implemented for each.

All currency parameters in this specification are expressed as a quantity of minimum dispense units, as defined in the description of the WFS INF_CDM_CURRENCY_EXP command (see Section 4.5).

There are two types of CDM: Self-Service CDM and Teller CDM. A Self-Service CDM operates in an automated environment, while a Teller CDM has an operator present. The functionality provided by the following commands is only applicable to a Teller CDM:

WFS_CMD_CDM_SET_TELLER_INFO

WFS_INF_CDM_TELLER_INFO

It is possible for the CDM to be part of a compound device with the Cash-In Module (CIM). This CIM\CDM combination is referred to throughout this specification as a "Cash Recycler". For details of the CIM interface see Ref. 3.

If the device is a Cash Recycler then, if cash unit exchanges are required on both interfaces, the exchanges cannot be performed concurrently. An exchange on one interface must be complete (the WFS CMD CDM END EXCHANGE must have completed) before an exchange can start on the other interface.

The WFS_ERR_CDM_EXCHANGEACTIVE error code will be returned if the correct sequence is not adhered to

The CIM interface can be used for all exchange operations on recycle devices, and the CIM interface should be used if the device has recycle units of multiple currencies and/or denominations (including multiple note identifiers associated with the same denomination).

The event WFS_SRVE_CDM_COUNTS_CHANGED will be posted if an operation on the CIM interface affects the cash unit counts which are available through the CDM interface.

The following commands on the CIM interface may affect the CDM counts:

WFS_CMD_CIM_CASH_IN WFS_CMD_CIM_CASH_IN_ROLLBACK WFS_CMD_CIM_RETRACT WFS_CMD_CIM_SET_CASH_IN_UNIT_INFO WFS_CMD_CIM_END_EXCHANGE WFS_CMD_CIM_RESET

> **Deleted:** WFS_CMD_CIM_TES T_CASH_UNITS

Deleted: If the device has recycle units of multiple currencies and/or denominations, then the CDM

Deleted: should

Deleted: CDM interface and the Cash-In cash unit counts will be available through the CIM interface. Counts for recycle cash units are available through both interfaces.

Deleted: recycle

4. Info Commands

4.1 WFS_INF_CDM_STATUS

Description This command is used to obtain the status of the CDM. It may also return vendor-specific status information.

Input Param None.

Output Param LPWFSCDMSTATUS lpStatus;

typedef struct wfs cdm status	
{	
WORD	fwDevice;
WORD	fwSafeDoor;
WORD	fwDispenser;
WORD	fwIntermediateStacker;
LPWFSCDMOUTPOS	*lppPositions;
LPSTR	lpszExtra;
DWORD	<pre>dwGuidLights[WFS_CDM_GUIDLIGHTS_SIZE];</pre>
WORD	wDevicePosition;
USHORT	usPowerSaveRecoveryTime;
WESCOMSTATUS *LPWESCOM	STATUS

} WFSCDMSTATUS, *LPWFSCDMSTATUS;

fwDevice

Supplies the state of the CDM. However, an *fwDevice* status of WFS_CDM_DEVONLINE does not necessarily imply that dispensing can take place: the value of the *fwDispenser* field must be taken into account and - for some vendors - the state of the safe door (*fwSafeDoor*) may also be relevant. The state of the CDM will have one of the following values:

Value	Meaning
WFS_CDM_DEVONLINE	The device is online. This is returned when
	the dispenser is present and operational.
WFS_CDM_DEVOFFLINE	The device is offline (e.g. the operator has
	taken the device offline by turning a switch
	or pulling out the device).
WFS_CDM_DEVPOWEROFF	The device is powered off or physically not connected.
WFS CDM DEVNODEVICE	The device is not intended to be there, e.g.
	this type of self service machine does not
	contain such a device or it is internally not
	configured.
WFS_CDM_DEVHWERROR	The device is inoperable due to a hardware
	error.
WFS_CDM_DEVUSERERROR	The device is present but a person is
	preventing proper device operation.
WFS_CDM_DEVBUSY	The device is busy and unable to process an
	execute command at this time.
WFS_CDM_DEVFRAUDATTEMPT	The device is present but has detected a
	fraud attempt.

fwSafeDoor

Supplies the state of the safe door as one of the following values:

Value	Meaning
WFS_CDM_DOORNOTSUPPORTED	Physical device has no safe door or door
	state reporting is not supported.
WFS_CDM_DOOROPEN	Safe door is open.
WFS_CDM_DOORCLOSED	Safe door is closed.
WFS_CDM_DOORUNKNOWN	Due to a hardware error or other condition,
	the state of the door cannot be determined.

fwDispenser

Supplies the state of the dispenser's logical cash units as one of the following values:

Value	Meaning
WFS_CDM_DISPOK	All cash units present are in a good state.
WFS_CDM_DISPCUSTATE	The dispenser is operational, but one or more of the cash units is in a low, empty or inoperative condition. Items can still be
WFS_CDM_DISPCUSTOP	dispensed from at least one of the cash units. Due to a cash unit failure dispensing is impossible. The dispenser is operational, but no items can be dispensed because all of the cash units are in an empty or inoperative condition. This state also occurs when a reject/retract cash unit is full or no
WFS_CDM_DISPCUUNKNOWN	reject/retract cash unit is present, or an application lock is set on every cash unit. Due to a hardware error or other condition, the state of the cash units cannot be determined.

fwIntermediateStacker

Supplies the state of the intermediate stacker. These bills are typically present on the intermediate stacker as a result of a retract operation or because a dispense has been performed without a subsequent present. Possible values for this field are:

Value	Meaning
WFS CDM ISEMPTY	The intermediate stacker is empty.
WFS_CDM_ISNOTEMPTY	The intermediate stacker is not empty. The items have not been in customer access.
WFS_CDM_ISNOTEMPTYCUST	The intermediate stacker is not empty. The items have been in customer access. If the device is a recycler then the items on the intermediate stacker may be there as a result of a previous Cash-In operation.
WFS_CDM_ISNOTEMPTYUNK	The intermediate stacker is not empty. It is not known if the items have been in customer access.
WFS_CDM_ISUNKNOWN	Due to a hardware error or other condition, the state of the intermediate stacker cannot be determined.
WFS_CDM_ISNOTSUPPORTED	The physical device has no intermediate stacker.

lppPositions

Pointer to a NULL-terminated array of pointers to WFSCDMOUTPOS structures. There is one structure for each position to which items can be dispensed or presented:

typedef struct _wfs_cdm_position
{

1	
WORD	fwPosition;
WORD	fwShutter;
WORD	fwPositionStatus;
WORD	<pre>fwTransport;</pre>
WORD	<pre>fwTransportStatus;</pre>
} WFSCDMOUTPOS,	*LPWFSCDMOUTPOS;

fwPosition

Supplies the output position as one of the following values:

Value	Meaning
WFS_CDM_POSLEFT	Left output position.
WFS_CDM_POSRIGHT	Right output position.
WFS_CDM_POSCENTER	Center output position.
WFS_CDM_POSTOP	Top output position.
WFS_CDM_POSBOTTOM	Bottom output position.
WFS_CDM_POSFRONT	Front output position.
WFS_CDM_POSREAR	Rear output position.
	1 1

fwShutter

Supplies the state of the shutter as one of the following values:

Value	Meaning
WFS_CDM_SHTCLOSED	The shutter is closed.
WFS_CDM_SHTOPEN	The shutter is opened.
WFS_CDM_SHTJAMMED	The shutter is jammed.
WFS_CDM_SHTUNKNOWN	Due to a hardware error or other
	condition, the state of the shutter cannot
	be determined.
WFS_CDM_SHTNOTSUPPORTED	The physical device has no shutter or shutter state reporting is not supported.

fwPositionStatus

Returns information regarding items which may be at the output position. If the device is a recycler it is possible that the output position will not be empty due to a previous Cash-In operation. The possible values of this field are:

Value	Meaning
WFS_CDM_PSEMPTY	The output position is empty.
WFS_CDM_PSNOTEMPTY	The output position is not empty.
WFS_CDM_PSUNKNOWN	Due to a hardware error or other condition, the state of the output position cannot be determined.
WFS_CDM_PSNOTSUPPORTED	The device is not capable of reporting whether or not items are at the output position.

fwTransport

Supplies the state of the transport mechanism as one of the following values:

Value	Meaning
WFS_CDM_TPOK	The transport is in a good state.
WFS_CDM_TPINOP	The transport is inoperative due to a
	hardware failure or media jam.
WFS_CDM_TPUNKNOWN	Due to a hardware error or other
	condition the state of the transport cannot
	be determined.
WFS_CDM_TPNOTSUPPORTED	The physical device has no transport or
	transport state reporting is not supported.

fwTransportStatus

Returns information regarding items which may be on the transport. If the device is a recycler device it is possible that the transport will not be empty due to a previous Cash-In operation. The possible values of this field are:

Value	Meaning
WFS_CDM_TPSTATEMPTY	The transport is empty.
WFS_CDM_TPSTATNOTEMPTY	The transport is not empty.
WFS_CDM_TPSTATNOTEMPTYCUST	Items which a customer has had access to are on the transport.
WFS_CDM_TPSTATNOTEMPTY_UNK	Due to a hardware error or other condition it is not known whether there
WFS_CDM_TPSTATNOTSUPPORTED	are items on the transport. The device is not capable of reporting whether items are on the transport.

lpszExtra

Pointer to a list of vendor-specific, or any other extended, information. The information is returned as a series of "key=value" strings so that it is easily extensible by Service Providers. Each string is null-terminated, with the final string terminating with two null characters. An empty list may be indicated by either a NULL pointer or a pointer to two consecutive null characters.

	dwGuid	Lights	[]
--	--------	--------	----

Specifies the state of the guidance light indicators. The elements of this array can be accessed by using the predefined index values specified for the *dwGuidLights* field in the capabilities. Vendor specific guidance lights are defined starting from the end of the array. The maximum guidance light index is WFS_CDM_GUIDLIGHTS_MAX.

Specifies the state of the guidance light indicator as WFS_CDM_GUIDANCE_NOT_AVAILABLE, WFS_CDM_GUIDANCE_OFF or a combination of the following flags consisting of one type B, and optionally one type C.

Value	Meaning	Туре
WFS CDM GUIDANCE NOT AVAILABL	E The status is not available.	Α
WFS CDM GUIDANCE OFF	The light is turned off.	A
WFS CDM GUIDANCE SLOW FLASH	The light is blinking slowly.	B
WFS CDM GUIDANCE MEDIUM FLASH	The light is blinking medium	B
	frequency.	
WFS_CDM_GUIDANCE_QUICK_FLASH	The light is blinking quickly.	B
WFS CDM GUIDANCE CONTINUOUS	The light is turned on	B
	continuous (steady).	
WFS CDM GUIDANCE RED	The light is red.	C
WFS_CDM_GUIDANCE_GREEN	The light is green.	C
WFS CDM GUIDANCE YELLOW	The light is yellow.	C
WFS CDM GUIDANCE BLUE	The light is blue.	С
WFS CDM GUIDANCE CYAN	The light is cyan.	C
WFS CDM GUIDANCE MAGENTA	The light is magenta.	C
WFS_CDM_GUIDANCE_WHITE	The light is white.	C

wDevicePosition

Specifies the device position. The device position value is independent of the *fwDevice* value, e.g. when the device position is reported as WFS_CDM_DEVICENOTINPOSITION, *fwDevice* can have any of the values defined above (including WFS_CDM_DEVONLINE or WFS_CDM_DEVOFFLINE). If the device is not in its normal operating position (i.e. WFS_CDM_DEVICEINPOSITION) then media may not be presented through the normal customer interface. This value is one of the following values:

Value	Meaning
WFS_CDM_DEVICEINPOSITION	The device is in its normal operating
	position, or is fixed in place and cannot be
	moved.
WFS_CDM_DEVICENOTINPOSITION	The device has been removed from its
	normal operating position.
WFS_CDM_DEVICEPOSUNKNOWN	Due to a hardware error or other condition,
	the position of the device cannot be
	determined.
WFS CDM DEVICEPOSNOTSUPP	The physical device does not have the
	capability of detecting the position.

usPowerSaveRecoveryTime

Specifies the actual number of seconds required by the device to resume its normal operational state from the current power saving mode. This value is zero if either the power saving mode has not been activated or no power save control is supported.

Error Codes Only the generic error codes defined in [Ref. 1] can be generated by this command.

Comments Applications which rely on the *lpszExtra* parameter may not be device or vendor-independent.

In the case where communication with the device has been lost, the *fwDevice* field will report WFS_CDM_DEVPOWEROFF when the device has been removed or WFS_CDM_DEVHWERROR if the communications are unexpectedly lost. All other fields should contain a value based on the following rules and priority:

1. Report the value as unknown.

2. Report the value as a general h/w error.

3. Report the value as the last known value.

4.2 WFS_INF_CDM_CAPABILITIES

Description

This command retrieves the capabilities of the CDM. It may also return vendor specific capability information. The intermediate stacker and the transport are treated as separate areas. Some devices may have the capability to move items from the cash units to the intermediate stacker while there are items on the transport. Similarly some devices may be able to retract items to the transport or the cash units while there are items on the intermediate stacker.

Input Param None.

Output Param LPWFSCDMCAPS lpCaps;

typedef struct _wfs_cdm_caps

{	
WORD	wClass;
WORD	fwType;
WORD	wMaxDispenseItems;
BOOL	bCompound;
BOOL	bShutter;
BOOL	bShutterControl;
WORD	<pre>fwRetractAreas;</pre>
WORD	<pre>fwRetractTransportActions;</pre>
WORD	fwRetractStackerActions;
BOOL	bSafeDoor;
BOOL	bCashBox;
BOOL	bIntermediateStacker;
BOOL	bItemsTakenSensor;
WORD	fwPositions;
WORD	fwMoveItems;
WORD	fwExchangeType;
LPSTR	lpszExtra;
DWORD	dwGuidLights[WFS CDM GUIDLIGHTS SIZE];
BOOL	bPowerSaveControl;
BOOL	bPrepareDispense;

} WFSCDMCAPS, *LPWFSCDMCAPS;

wClass

Specifies the logical service class as WFS_SERVICE_CLASS_CDM.

fwType

Supplies the type of CDM as one of the following values:

Value	Meaning
WFS_CDM_TELLERBILL	The CDM is a Teller Bill Dispenser.
WFS_CDM_SELFSERVICEBILL	The CDM is a Self Service Bill Dispenser.
WFS_CDM_TELLERCOIN	The CDM is a Teller Coin Dispenser.
WFS_CDM_SELFSERVICECOIN	The CDM is a Self Service Coin Dispenser.

wMaxDispenseItems

Supplies the maximum number of items that can be dispensed in a single dispense operation. If no limit applies this value will be zero - in this case, if an attempt is made to dispense more items than the hardware limitations will allow, the Service Provider will implement the dispense as a series of sub-dispense operations [see section Sub-Dispensing Command Flow].

bCompound

Specifies whether the CDM is part of a compound device. If the CDM is part of a compound device with a CIM then this combination can be referred to as a recycler. In this case, no information on Cash-In cash units will be supplied via the CDM interface. The CDM interface will however supply information on shared retract or reject cash units and recycler cash units.

bShutter

Specifies whether or not the commands WFS_CMD_CDM_OPEN_SHUTTER and WFS_CMD_CDM_CLOSE_SHUTTER are supported.

bShutterControl

If set to TRUE the shutter is controlled implicitly by the Service Provider. If set to FALSE the shutter must be controlled explicitly by the application using the WFS_CMD_CDM_OPEN_SHUTTER and the WFS_CMD_CDM_CLOSE_SHUTTER commands. This field is always set to TRUE if the device has no shutter. This field applies to all shutters and all output positions.

fwRetractAreas

Specifies the area to which items may be retracted as a combination of the following flags:

Value	Meaning
WFS_CDM_RA_RETRACT	The items may be retracted to the retract cash unit.
WFS CDM RA TRANSPORT	The items may be retracted to the transport.
WFS_CDM_RA_STACKER	The items may be retracted to the intermediate stacker.
WFS_CDM_RA_REJECT	The items may be retracted to the reject cash unit.
WFS CDM RA ITEMCASSETTE	The items may be retracted to the item
WFS CDM RA NOTSUPP	cassettes, i.e. cassettes that can be dispensed from. The CDM does not have the ability to
	retract.

fwRetractTransportActions

Specifies the actions which may be performed on items which have been retracted to the transport. If the device does not have a retract capability this value will be WFS_CDM_NOTSUPP. This field will be a combination of the following flags:

Value	Meaning
WFS CDM PRESENT	The items may be presented.
WFS_CDM_RETRACT	The items may be retracted to a retract cash unit.
WFS_CDM_REJECT	The items may be rejected to a reject bin.
WFS CDM ITEMCASSETTE	The items may be retracted to the item
NEG ODM NOTOUDD	cassettes, i.e. cassettes that can be dispensed from.
WFS_CDM_NOTSUPP	The CDM does not have the ability to retract from the transport.

fwRetractStackerActions

Specifies the actions which may be performed on items which have been retracted to the stacker. If the device does not have a retract capability this value will be WFS_CDM_NOTSUPP. Otherwise it will be a combination of the following flags:

Value	Meaning
WFS_CDM_PRESENT	The items may be presented.
WFS_CDM_RETRACT	The items may be retracted to a retract cash
	unit.
WFS_CDM_REJECT	The items may be rejected to a reject bin.
WFS_CDM_ITEMCASSETTE	The items may be retracted to the item
	cassettes, i.e. cassettes that can be dispensed from.
WFS_CDM_NOTSUPP	The CDM does not have the ability to retract from the stacker.

bSafedoor

Specifies whether or not the WFS_CMD_CDM_OPEN_SAFE_DOOR command is supported.

bCashBox

This field is only applicable to CDM types WFS_CDM_TELLERBILL and WFS_CDM_TELLERCOIN. It specifies whether or not tellers have been assigned a Cash Box.

bIntermediateStacker

Specifies whether or not the CDM supports stacking items to an intermediate position before the items are moved to the exit position. If this value is TRUE, the parameter *bPresent* of the WFS_CMD_CDM_DISPENSE command can be set to FALSE [see Section WFS_CMD_CDM_DISPENSE].

bItemsTakenSensor

Specifies whether the CDM can detect when items at the exit position are taken by the user. If set to TRUE the Service Provider generates an accompanying WFS_SRVE_CDM_ITEMS_TAKEN event. If set to FALSE this event is not generated. This field applies to all output positions.

fwPositions

Specifies the CDM output positions which are available as a combination of the following flags:

Value	Meaning
WFS_CDM_POSLEFT	The CDM has a left output position.
WFS_CDM_POSRIGHT	The CDM has a right output position.
WFS_CDM_POSCENTER	The CDM has a center output position.
WFS_CDM_POSTOP	The CDM has a top output position.
WFS_CDM_POSBOTTOM	The CDM has a bottom output position.
WFS_CDM_POSFRONT	The CDM has a front output position.
WFS_CDM_POSREAR	The CDM has a rear output position.

fwMoveItems

Specifies the CDM move item options which are available as a combination of the following flags:

Value	Meaning
WFS_CDM_FROMCU	The CDM can move items from the cash
	units to the intermediate stacker while there are items on the transport.
WFS_CDM_TOCU	The CDM can retract items to the cash units while there are items on the intermediate stacker.
WFS_CDM_TOTRANSPORT	The CDM can retract items to the transport while there are items on the intermediate stacker.

fwExchangeType

Specifies the type of cash unit exchange operations supported by the CDM as a combination of the following flags:

Value	Meaning
WFS_CDM_EXBYHAND	The CDM supports manual replenishment
	either by filling the cash unit by hand or by
	replacing the cash unit.
WFS_CDM_EXTOCASSETTES	The CDM supports moving items from the
	replenishment cash unit to another cash unit.

lpszExtra

Pointer to a list of vendor-specific, or any other extended, information. The information is returned as a series of *"key=value"* strings so that it is easily extensible by Service Providers. Each string is null-terminated, with the final string terminating with two null characters. <u>An</u> empty list may be indicated by either a NULL pointer or a pointer to two consecutive null characters.

dwGuidLights [...]

Specifies which guidance lights are available. A number of guidance light positions are defined below. Vendor specific guidance lights are defined starting from the end of the array. The maximum guidance light index is WFS CDM GUIDLIGHTS MAX.

The elements of this array are specified as a combination of the following flags and indicate all of the possible flash rates (type B) and colors (type C) that the guidance light indicator is capable of handling. If the guidance light indicator only supports one color then no value of type C is returned. A value of WFS_CDM_GUIDANCE_NOT_AVAILABLE indicates that the device has no guidance light indicator or the device controls the light directly with no application control possible.

Value	Meaning	Туре
WFS CDM GUIDANCE NOT AVAILABLE	There is no guidance light control	A
	available at this position.	
WFS_CDM_GUIDANCE_OFF	The light can be off.	B
WFS_CDM_GUIDANCE_SLOW_FLASH	The light can blink slowly.	B
WFS_CDM_GUIDANCE_MEDIUM_FLASH	The light can blink medium	В
	frequency.	
WFS_CDM_GUIDANCE_QUICK_FLASH	The light can blink quickly.	B
WFS_CDM_GUIDANCE_CONTINUOUS	The light can be	В
	continuous (steady).	
WFS CDM GUIDANCE RED	The light can be red.	C
WFS CDM GUIDANCE GREEN	The light can be green.	C
WFS CDM GUIDANCE YELLOW	The light can be yellow.	С
WFS CDM GUIDANCE BLUE	The light can be blue.	С
WFS CDM GUIDANCE CYAN	The light can be cyan.	C
WFS_CDM_GUIDANCE_MAGENTA	The light can be magenta.	C
WFS CDM GUIDANCE WHITE	The light can be white.	С

Each array index represents an output position in the CDM. The elements are accessed using the following definitions for the index value:

Value	Meaning			
WFS_CDM_GUIDANCE_POSOUTNULL	The default output position.			
WFS_CDM_GUIDANCE_POSOUTLEFT	Left output position.			
WFS_CDM_GUIDANCE_POSOUTRIGHT	Right output position.			
WFS_CDM_GUIDANCE_POSOUTCENTER	Center output position.			
WFS_CDM_GUIDANCE_POSOUTTOP	Top output position.			
WFS_CDM_GUIDANCE_POSOUTBOTTOM	Bottom output position.			
WFS_CDM_GUIDANCE_POSOUTFRONT	Front output position.			
WFS_CDM_GUIDANCE_POSOUTREAR	Rear output position.			
bPowerSaveControl				
	Specifies whether power saving control is available. This can either be TRUE if available or			
FALSE if not available.				
TALSE II not available.				
	<u>bPrepareDispense</u>			
On some hardware it can take a significant amount of time for the dispenser to get ready to				
dispense media. On this type of hardware the WFS_CMD_CDM_PREPARE_DISPENSE				
command can be used to improve transaction performance. This flag indicates if the hardware				
requires the application to use the WFS CMD_CDM_PREPARE_DISPENSE command to				
maximize transaction performance. If this flag is TRUE then the				
WFS CMD CDM PREPARE DISPENSE command is supported and can be used to improve				
transaction performance. If this flag is FALSE then the				
WFS_CMD_CDM_PREPARE_DISPENSE is not su	<u>apported.</u>			

Error Codes Only the generic error codes defined in [Ref. 1] can be generated by this command.

Comments Applications which rely on the *lpszExtra* parameter may not be device or vendor-independent.

4.3 WFS_INF_CDM_CASH_UNIT_INFO

Description

This command is used to obtain information regarding the status and contents of the cash units in the CDM.

Where a logical cash unit is configured but there is no corresponding physical cash unit currently present in the device, information about the missing cash unit will still be returned in the *lppList* field of the output parameter. The status of the cash unit will be reported as WFS_CDM_STATCUMISSING.

It is possible that one logical cash unit may be associated with more than one physical cash unit. In this case, the number of cash unit structures returned in *lpCashUnitInfo* will reflect the number of logical cash units in the CDM. That is, if a system contains four physical cash units but two of these are treated as one logical cash unit, *lpCashUnitInfo* will contain information about the three logical cash units and a *usCount* of 3. Information about the physical cash unit(s) associated with a logical cash unit is contained in the WFSCDMCASHUNIT structure representing the logical cash unit.

It is also possible that multiple logical cash units may be associated with one physical cash unit. This should only occur if the physical cash unit is capable of handling this situation, i.e. if it can store multiple denominations and report meaningful count and replenishment information for each denomination or if it can store retracted and rejected items as separate logical units and report meaningful count and replenishment information for each of them. In this case the information returned in *lpCashUnitInfo* will again reflect the number of logical cash units in the CDM.

Logical Types

A cash unit may have a logical type. A logical type is based on the value of the following fields of the WFSCDMCASHUNIT structure:

lpszCashUnitName usType cCurrencyID ulValues

A logical type of cash unit may be associated with more than one physical cash unit. The logical type is distinct from the logical number (*usNumber*), i.e. *usNumber* does not refer to the logical cassette type.

Counts

On cash units that dispense items, if *ulCount* (on logical and physical cash units) reaches zero it will not decrement further but will remain at zero. When *ulCount* reaches zero no further dispense or denominate operations will be possible using that cash unit, unless the Service Provider provides a configuration option to continue using cash units when *ulCount* reaches zero. The default setting for any such configuration parameter must be to stop using the cash unit when this value reaches zero. If the Service Provider is configured such that the cash unit can still be used when *ulCount* reaches zero then WFS_CDM_STATCUEMPTY should not be generated when *ulCount* reaches zero, rather it should be generated when all physical cash units associated with the logical cash unit are physically empty. On recyclers, the Service Provider is configured to keep using the cash unit when *ulCount* is zero if the value in *ulCount* is used by any part of the application, as it may not be accurate. However, if the Service Provider is configured to keep using the cash unit when *ulCount* using *ulDispensedCount*, *ulRetractedCount* and the CIM *ulCashInCount*, e.g. Number of Notes = *ulInitialCount* – *ulDispensedCount* + *ulRetractedCount* + CIM::*ulCashInCount*.

Threshold Events

The threshold event WFS_USRE_CDM_CASHUNITTHRESHOLD can be triggered either by hardware sensors in the device or by the *ulCount* reaching the *ulMinimum* or *ulMaximum* value.

Deleted: The values of the following fields of the WFSCDMCASHUNIT and WFSCDMPHCU structures:¶ *ulCount*¶ *ulRejectCount*¶ The application can check if the device has this capability by querying the *bHardwareSensors* field of the physical cash unit structure. If any of the physical cash units associated with the logical cash unit have this capability, then threshold events based on hardware sensors can be triggered.

In the situation where the cash unit is associated with multiple physical cash units, if the Service Provider has the capability, the WFS_SRVE_CDM_CASHUNITINFOCHANGED event may be generated when any of the physical cash units reaches the threshold. When the final physical cash unit reaches the threshold, the WFS_USRE_CDM_CASHUNITTHRESHOLD event will be generated.

Exchanges

If a physical cash unit is inserted (including removal followed by a reinsertion) when the device is not in the exchange state the <u>usStatus</u> of the physical cash unit will be set to WFS_CDM_STATCUMANIP and the values of the physical cash unit prior to its' removal will be returned in any subsequent WFS_INF_CDM_CASH_UNIT_INFO command. The physical cash unit will not be used in any operation. The application must perform an exchange operation specifying the new values for the physical cash unit in order to recover the situation.

On recycling and retract units the counts and status are consistently reported on both the CDM and CIM interfaces. When a value is changed through an exchange on one interface it is also changed on the other.

Recyclers

The CDM interface does not report cash-in only cash units but does report cash units which are shared with the CIM, i.e. recycling cash units (WFS_CDM_TYPERECYCLING) and reject/retract cash units (WFS_CDM_TYPEREJECTCASSETTE / WFS_CDM_TYPERETRACTCASSETTE). The CIM interface reports all cash units of all types, including those that can only be used by commands on the CDM interface.

Input Param None.

Output Param LPWFSCDMCUINFO lpCashUnitInfo;

typedef struct _wfs_cdm_cu_info

USHORT	usTellerID;
USHORT	usCount;
LPWFSCDMCASHUNIT	<pre>*lppList;</pre>
} WFSCDMCUINFO, *	LPWFSCDMCUINFO;

usTellerID

{

This field is not used in this command and is always zero.

usCount

Specifies the number of cash unit structures returned.

lppList

Pointer to an array of pointers to <u>WFSCDMCASHUNIT</u> structures:

Deleted: removed

Deleted: Through the Deleted: a service provider

Deleted: and through the CIM interface it

Deleted: not

Deleted: out cash

Deleted: . But both device classes report the

Deleted: cash unit

typedef struct _wfs_cdm_cashunit		
{		
USHORT	usNumber;	
USHORT	usType;	
LPSTR	lpszCashUnitName;	
CHAR	cUnitID[5];	
CHAR	cCurrencyID[3];	
ULONG	ulValues;	
ULONG	ulInitialCount;	
ULONG	ulCount;	
ULONG	ulRejectCount;	
ULONG	ulMinimum;	
ULONG	ulMaximum;	
BOOL	bAppLock;	
USHORT	usStatus;	
USHORT	usNumPhysicalCUs;	
LPWFSCDMPHCU	<pre>*lppPhysical;</pre>	
ULONG	ulDispensedCount;	
ULONG	ulPresentedCount;	
ULONG	ulRetractedCount;	
} WFSCDMCASHUNIT,	*LPWFSCDMCASHUNIT;	

usNumber

Index number of the cash unit structure. Each structure has a unique logical number starting with a value of one (1) for the first structure, and incrementing by one for each subsequent structure.

usType

Type of cash unit. Possible values are:

Value	Meaning
WFS_CDM_TYPENA	Not applicable. Typically means cash
	unit is missing.
WFS_CDM_TYPEREJECTCASSETTE	Reject cash unit. This type will also
	indicate a combined reject/retract cash
	<u>unit.</u>
WFS_CDM_TYPEBILLCASSETTE	Cash unit containing bills.
WFS_CDM_TYPECOINCYLINDER	Coin cylinder.
WFS_CDM_TYPECOINDISPENSER	Coin dispenser as a whole unit.
WFS_CDM_TYPERETRACTCASSETTE	Retract cash unit.
WFS_CDM_TYPECOUPON	Cash unit containing coupons or
	advertising material.
WFS_CDM_TYPEDOCUMENT	Cash unit containing documents.
WFS_CDM_TYPEREPCONTAINER	Replenishment container. A cash unit can
	be refilled from a replenishment
	container.
WFS_CDM_TYPERECYCLING	Recycling cash unit. This unit is only
	present when the device is a compound
	device with a CIM.

lpszCashUnitName

A name which helps to identify the logical type of the cash unit. This is especially useful in the case of cash units of type WFS_CDM_TYPEDOCUMENT where different documents can have the same currency and value. For example, travelers checks and bank checks may have the same currency and value but still need to be identifiable as different types of document. Where this value is not relevant (e.g. in bill cash units) the pointer will be NULL. This value is persistent.

cUnitID

The Cash Unit Identifier.

cCurrencyID

A three character array storing the ISO format [Ref. 2] Currency ID. This value will be an array of three ASCII 0x20h characters for cash units which contain items of more than one currency type or items to which currency is not applicable. If the *usStatus* field for this cash unit is WFS_CDM_STATCUNOVAL it is the responsibility of the application to assign a value to this field. This value is persistent.

ulValues

Supplies the value of a single item in the cash unit. This value is expressed in minimum dispense units [see Section WFS_INF_CDM_CURRENCY_EXP]. If the *cCurrencyID* field for this cash unit is empty, then this field will contain zero. If the *usStatus* field for this cash unit is WFS_CDM_STATCUNOVAL it is the responsibility of the application to assign a value to this field. This value is persistent.

value to this field. This value to persistent.		
<i>ulInitialCount</i> Initial number of items contained in the cash unit. This value is persistent		Deleted: If the cash unit is a recycle cash unit thenthis value
<i>ulCount</i> <u>The meaning of this count depends on the type of cash unit. This value is persistent.</u>		will be incremented as a result of a Cash-In operation.
For all cash units except retract cash units (usType is not	+	Deleted: number
<u>WFS_CDM_TYPERETRACTCASSETTE</u>) this value specifies the number of items inside all the physical cash units associated with this cash unit	{	Deleted: , plus
For all dispensing cash units (<i>usType</i> is WFS_CDM_TYPEBILLCASSETTE, WFS_CDM_TYPECOINCYLINDER, WFS_CDM_TYPECOINDISPENSER, WFS_CDM_TYPECOUPON, WFS_CDM_TYPEDOCUMENT or		
WFS_CDM_TYPERECYCLING), this value includes any items from the physical cash units not yet presented to the customer. This count is decremented when the items are either presented to the customer or rejected.		Deleted: these
If the cash unit is usable from the CIM interface (<i>usType</i> is WFS_CDM_TYPERECYCLING, <u>WFS_CDM_TYPERETRACTCASSETTE</u> or WFS_CDM_TYPEREJECTCASSETTE) then this value will be incremented as a result of a Cash-In operation.	1	Deleted: a recycle cash unit
Note that for a reject cash unit (<i>usType</i> is WFS_CDM_TYPEREJECTCASSETTE), this value is unreliable, since the typical reason for dumping items to the reject cash unit is a suspected count failure.		Deleted: For a retract cash unit
For a retract cash unit (<i>usType</i> is WFS_CDM_TYPERETRACTCASSETTE) this value specifies the number of retract operations (CDM commands, CIM commands and error recoveries) which result in items entering the cash unit.		this value specifies the number of retracts.
<i>ulRejectCount</i> The number of items from this cash unit which are in the reject bin. This value may be unreliable, since the typical reason for dumping items to the reject cash unit is a suspected pick failure. For reject and retract cash units (<i>usType</i> is <u>WFS_CDM_TYPEREJECTCASSETTE or WFS_CDM_TYPERETRACTCASSETTE</u>) this parameter does not apply and will be reported as zero. This value is persistent.		
<i>ulMinimum</i> This field is not applicable to Retract and Reject Cash Units. For all other cash units, when <i>ulCount</i> reaches this value the threshold event		Deleted: will be generated. If
WFS_USRE_CDM_CASHUNITTHRESHOLD (<u>WFS_CDM_STATCULOW</u>) will be generated. If this value is non-zero then hardware sensors in the device do not trigger threshold events. If this value is zero then hardware sensors may trigger threshold events. This		this value is non-0 then hardware

This field is only applicable to Retract and Reject Cash Units. When *ulCount* reaches this value the threshold event WFS_USRE_CDM_CASHUNITTHRESHOLD (WFS_CDM_STATCUHIGH) will be generated. If this value is non-zero then hardware sensors in the device do not trigger threshold events. If this value is zero then hardware sensors may trigger threshold events. This value is persistent.

bAppLock

This field does not apply to reject or retract cash units. If this value is TRUE items cannot be dispensed from the cash unit. If this value is TRUE and the application attempts to dispense from the cash unit a WFS_EXEE_CDM_CASHUNITERROR event will be generated and a WFS_ERR_CDM_CASHUNITERROR code will be returned.

usStatus

Supplies the status of the cash unit as one of the following values:

Page 21 CWA 15748-64:2008

Value	Meaning	
WFS_CDM_STATCUOK	The cash unit is in a good state.	
WFS_CDM_STATCUFULL	The cash unit is full. <u>This value only</u>	
	applies to cash units where us Type is WFS CDM TYPEREJECTCASSETTE	
	or WFS_CDM_TYPERETRACT-	
	CASSETTE.	
WFS_CDM_STATCUHIGH	The cash unit is almost full (i.e. reached Deleted: nearing	
	or exceeded the threshold defined by	
	ulMaximum). This value only applies to	
	cash units where us Type is	
	WFS_CDM_TYPEREJECTCASSETTE	
	or WFS_CDM_TYPERETRACT- CASSETTE.	
WFS_CDM_STATCULOW	The cash unit is almost empty (i.e.	
wis_ebw_strateobow	<u>reached or below</u> the threshold defined Deleted: nearing	
	by <i>ulMinimum</i>). This value does not	
	apply to cash units where usType is	
	WFS_CDM_TYPEREJECTCASSETTE	
	or WFS_CDM_TYPERETRACT-	
	CASSETTE.	
WFS_CDM_STATCUEMPTY	The cash unit is empty, or insufficient items in the cash unit are preventing	
	further dispense operations. This does not	
	apply to cash units where usType is	
	WFS CDM TYPEREJECTCASSETTE	
	or WFS_CDM_TYPERETRACT-	
	CASSETTE.	
WFS_CDM_STATCUINOP	The cash unit is inoperative.	
WFS_CDM_STATCUMISSING	The cash unit is missing.	
WFS_CDM_STATCUNOVAL	The values of the specified cash unit are not available.	
WFS_CDM_STATCUNOREF	There is no reference value available for	
	the notes in this cash unit. The cash unit	
	has not been calibrated.	
WFS_CDM_STATCUMANIP	The cash unit has been <u>inserted</u> Deleted: changed	
	(including removal followed by a	
	reinsertion) when the device was not in	
	the exchange state. This cash unit cannot	
	be dispensed from.	
<u>DispensedCount</u>		
e number of items dispensed from all the ph	ysical cash units associated with this cash unit.	
is count is incremented when the items are r sh units. This count includes any items that y		
is field is always zero for cash units with a <i>i</i>		
/FS_CDM_TYPEREJECTCASSETTE or WFS_CDM_TYPERETRACTCASSETTE. This		
lue is persistent.		
PresentedCount		
	units associated with this cash unit that have	
	accemented when the items are presented to the	
istomer. If it is unknown if a customer has been presented with the items, then this count is		
t updated. This field is always zero for cash		
	FS_CDM_TYPERETRACTCASSETTE. This	
lue is persistent.		
RetractedCount		
e number of items that have been retracted i	nto all the physical cash units associated with	
<u>s cash unit. This value is persistent.</u>		

usNumPhysicalCUs

The number of physical cash unit structures returned in the following *lppPhysical* array. This number must be at least 1.

lppPhysical

Pointer to an array of pointers to WFSCDMPHCU structures:

typedef struct _wfs_cdm_physicalcu

{		
LPSTR		lpPhysicalPositionName;
CHAR		cUnitID[5];
ULONG		ulInitialCount;
ULONG		ulCount;
ULONG		ulRejectCount;
ULONG		ulMaximum;
USHORT		usPStatus;
BOOL		bHardwareSensor;
ULONG		ulDispensedCount;
ULONG		ulPresentedCount;
ULONG		ulRetractedCount;
} WFSCDMPHCU,	*LPWFSCDMPHC	CU;

lpPhysicalPositionName

A name identifying the physical location of the cash unit within the CDM. This field can be used by CDMs which are compound with a CIM to identify shared cash units.

cUnitID

A 5 character array uniquely identifying the physical cash unit.

ulInitialCount

Initial number of items contained in the cash unit. This value is persistent.

<u>ulCount</u>

As defined by the logical *ulCount* description but applies to a single physical cash unit, but with the following exceptions:

This count does not include items dispensed but not yet presented.

<u>On cash units belonging to logical cash units with *usType* set to WFS_CDM_TYPERETRACTCASSETTE the physical count represents the number of items, unless the device cannot count items during a retract, in which case this count will be zero.</u>

This value is persistent.

ulRejectCount

As defined by the logical *ulRejectCount* description but applies to a single physical cash unit. This value is persistent.

ulMaximum

The maximum number of items the cash unit can hold. This is only for informational purposes. No threshold event WFS_USRE_CDM_CASHUNITTHRESHOLD will be generated. <u>This value is persistent.</u>

usPStatus

Supplies the status of the physical cash unit as one of the following values:

Value

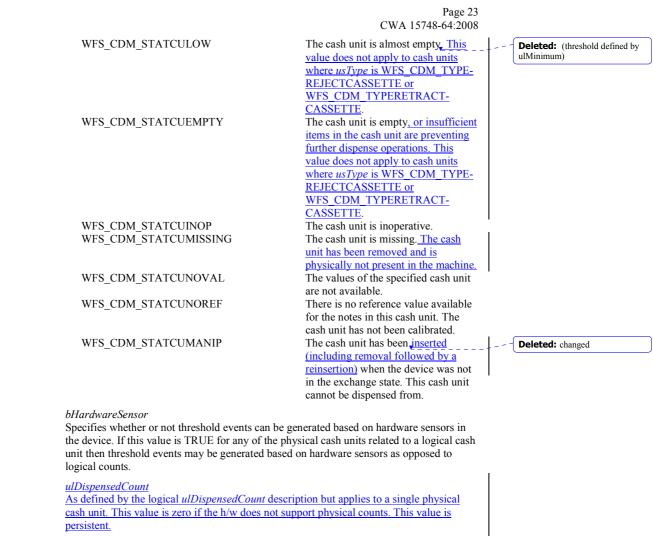

value	wieannig
WFS_CDM_STATCUOK	The cash unit is in a good state.
WFS_CDM_STATCUFULL	The cash unit is full. This value only
	applies to cash units where usType is
	WFS CDM TYPEREJECTCASSET
	TE or WFS CDM TYPERETRACT-
	CASSETTE.
WFS_CDM_STATCUHIGH	The cash unit is almost full (reached
	or exceeded threshold defined by
	ulMaximum). This value only applies
	to cash units where usType is
	WFS_CDM_TYPEREJECT-
	CASSETTE or
	WFS CDM TYPERETRACT-
	CASSETTE.

Meaning

Deleted: *ullnitialCount*. Initial number of items contained in the cash unit. If the cash unit is a recycle cash unit then this count may be incremented as a result of a Cash-In operation. This value is persistent.¶ *ulCount*. Actual count of items in the

Actual count of iterits in the physical cash unit. This count is decremented whenever a bill leaves the physical cash unit for any reason. This count may be incremented if the cash unit is a recycle cash unit. This value is persistent.¶ *ulRejectCount*.

The number of items from this cash unit which are in the reject bin. This value may be unreliable, since the typical reason for dumping items to the reject cash unit is a suspected pick failure. This value is persistent.¶

ulPresentedCount

As defined by the logical *ulPresentedCount* description but applies to a single physical cash unit. This value is zero if the h/w does not support physical counts. This value is persistent.

ulRetractedCount

As defined by the logical *ulRetractedCount* description but applies to a single physical cash unit. This value is zero if the h/w does not support physical counts. This value is persistent.

Error Codes Only the generic error codes defined in [Ref. 1] can be generated by this command.

Comments

None.

4.4 WFS_INF_CDM_TELLER_INFO

Description

This command only applies to Teller CDMs. It allows the application to obtain counts for each currency assigned to the teller. These counts represent the total amount of currency dispensed by the teller in all transactions.

This command also enables the application to obtain the position assigned to each teller. If the input parameter is NULL, this command will return information for all tellers and all currencies. The teller information is persistent.

Input Param LPWFSCDMTELLERINFO lpTellerInfo;

typedef struct _wfs_cdm_teller_info
{
 USHORT usTellerID;
 CHAR cCurrencyID[3];
 WFSCDMTELLERINFO, *LPWFSCDMTELLERINFO;

usTellerID

Identification of the teller. If the value of *usTellerID* is not valid the error WFS ERR CDM_INVALIDTELLERID is reported.

cCurrencyID

Three character ISO format currency identifier [Ref 2].

This parameter can be an array of three ASCII 0x20 characters. In this case information on all currencies will be returned.

Output Param LPWFSCDMTELLERDETAILS *lppTellerDetails;

Pointer to a NULL-terminated array of pointers to WFSCDMTELLERDETAILS structures.

typedef struct _wfs_cdm_teller_details

USHORT	usTellerID;
ULONG	ulInputPosition;
WORD	fwOutputPosition;
LPWFSCDMTELLERTOTALS	<pre>*lppTellerTotals;</pre>
<pre>} WFSCDMTELLERDETAILS,</pre>	*LPWFSCDMTELLERDETAILS;

usTellerID

Identification of the teller.

ulInputPosition

{

The input position assigned to the teller for cash entry. This is only for compatibility except when the device is a compound device. The value is specified by one of the following values:

Value	Meaning
WFS_CDM_POSNULL	No position is assigned to the teller.
WFS_CDM_POSINLEFT	Left position is assigned to the teller.
WFS_CDM_POSINRIGHT	Right position is assigned to the teller.
WFS_CDM_POSINCENTER	Center position is assigned to the teller.
WFS_CDM_POSINTOP	Top position is assigned to the teller.
WFS_CDM_POSINBOTTOM	Bottom position is assigned to the teller.
WFS_CDM_POSINFRONT	Front position is assigned to the teller.
WFS_CDM_POSINREAR	Rear position is assigned to the teller.

fwOutputPosition

The output position from which cash is presented to the teller. The value is specified by one of the following values:

Value	Meaning
WFS_CDM_POSNULL	No position is assigned to the teller.
WFS_CDM_POSLEFT	Left position is assigned to the teller.
WFS_CDM_POSRIGHT	Right position is assigned to the teller.
WFS_CDM_POSCENTER	Center position is assigned to the teller.
WFS_CDM_POSTOP	Top position is assigned to the teller.
WFS_CDM_POSBOTTOM	Bottom position is assigned to the teller.

WFS_CDM_POSFRONT WFS_CDM_POSREAR

Front position is assigned to the teller. Rear position is assigned to the teller.

lppTellerTotals

Pointer to a NULL-terminated array of pointers to WFSCDMTELLERTOTALS structures.

typedef struct _wfs_cdm_teller_totals

{	
CHAR	cCurrencyID[3];
ULONG	ulItemsReceived;
ULONG	ulItemsDispensed;
ULONG	ulCoinsReceived;
ULONG	ulCoinsDispensed;
ULONG	ulCashBoxReceived;
ULONG	ulCashBoxDispensed;
} WFSCDMTELLERTOTALS,	*LPWFSCDMTELLERTOTALS;

cCurrencyID

Three character ISO format currency identifier [Ref. 2].

ulItemsReceived

The total amount of items (other than coins) of the specified currency accepted. The amount is expressed in minimum dispense units (see WFS_INF_CDM_CURRENCY_EXP).

ulItemsDispensed

The total amount of items (other than coins) of the specified currency dispensed. The amount is expressed in minimum dispense units (see WFS_INF_CDM_CURRENCY_EXP).

ulCoinsReceived

The total amount of coin currency accepted. The amount is expressed in minimum dispense units (see WFS_INF_CDM_CURRENCY_EXP).

ulCoinsDispensed

The total amount of coin currency dispensed. The amount is expressed in minimum dispense units (see WFS_INF_CDM_CURRENCY_EXP).

ulCashBoxReceived

The total amount of cash box currency accepted. The amount is expressed in minimum dispense units (see WFS_INF_CDM_CURRENCY_EXP).

ulCashBoxDispensed

The total amount of cash box currency dispensed. The amount is expressed in minimum dispense units (see WFS_INF_CDM_CURRENCY_EXP).

Error Codes In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_CDM_INVALIDCURRENCY	Specified currency not currently available.
WFS_ERR_CDM_INVALIDTELLERID	Invalid Teller ID.

Comments None.

4.5 WFS_INF_CDM_CURRENCY_EXP

Description	This command returns each exponent assigned to each currency known to the Service Provider.	
Input Param	None.	
Output Param LPWFSCDMCURRENCYEXP *lppCurrencyExp;		
	Pointer to a NULL-terminated array of pointers to WFSCDMCURRENCYEXP structures:	
	<pre>typedef struct _wfs_cdm_currency_exp { CHAR cCurrencyID[3]; SHORT sExponent; } WFSCDMCURRENCYEXP, *LPWFSCDMCURRENCYEXP;</pre>	
	<i>cCurrencyID</i> Currency identifier in ISO 4217 format [see Ref 2].	
<i>sExponent</i> Currency exponent in ISO 4217 format [see Ref. 2].		
Error Codes	Only the generic error codes defined in [Ref. 1] can be generated by this command.	
Comments	For each currency ISO 4217 defines the currency identifier (a three character code) and a currency unit (e.g., European Euro, Japanese Yen). In the interface defined by this specification, every money amount is specified in terms of multiples of the minimum dispense unit, which is equal to the currency unit times ten to the power of the currency exponent. Thus an amount parameter relates to the actual cash amount as follows:	
	<cash_amount> = <money_amount_parameter> * 10^<sexponent></sexponent></money_amount_parameter></cash_amount>	
	Example #1 - Euro Currency identifier is 'EUR' Currency unit is 1 Euro (= 100 Cent)	
	A Service Provider is developed for an ATM that can dispense coins down to one Cent. The currency exponent (<i>sExponent</i>) is set to -2 (minus two), so the minimum dispense unit is one Cent ($1 * 10^{-2}$ Euro); all amounts at the XFS interface are in Cent. Thus a money amount parameter of 10050 is 100 Euro and 50 Cent.	
	Example #2 - Japan Currency identifier is 'JPY'	

Currency identifier is 'JPY' Currency unit is 1 Japanese Yen

A Service Provider is required to dispense a minimum amount of 1000 Yen. The currency exponent (*sExponent*) is set to +3 (plus three), so the minimum dispense unit is 1000 Yen; all amounts at the XFS interface are in multiples of 1000 Yen. Thus an amount parameter of 15 is 15000 Yen.

4.6 WFS_INF_CDM_MIX_TYPES

Description This command is used to obtain a list of supported mix algorithms and available house mix tables.

Input Param None.

Output Param LPWFSCDMMIXTYPE *lppMixTypes;

Pointer to a NULL-terminated array of pointers to WFSCDMMIXTYPE structures:

typedef struct _wfs_cdm_mix_type

l	
USHORT	usMixNumber;
USHORT	usMixType;
USHORT	usSubType;
LPSTR	lpszName;
<pre>} WFSCDMMIXTYPE,</pre>	*LPWFSCDMMIXTYPE;

usMixNumber

Number identifying the mix algorithm or the house mix table. This number can be passed to the WFS_INF_CDM_MIX_TABLE, WFS_CMD_CDM_DISPENSE and WFS_CMD_CDM_DENOMINATE commands.

usMixType

Specifies whether the mix type is an algorithm or a house mix table. Possible values are:

Value	Meaning
WFS_CDM_MIXALGORITHM	Mix algorithm.
WFS_CDM_MIXTABLE	Mix table.

usSubType

Contains a vendor-defined number that identifies the type of algorithm or table. Individual vendor-defined mix algorithms are defined above hexadecimal 7FFF. Mix algorithms which are provided by the Service Provider are in the range hexadecimal 8000 - 8999. Application defined mix algorithms start at hexadecimal 9000. All numbers below 8000 hexadecimal are reserved. Predefined values are:

Value	Meaning
WFS_CDM_MIX_MINIMUM_NUMBER_OF	BILLS
	Select a mix requiring the minimum possible
	number of items.
WFS_CDM_MIX_EQUAL_EMPTYING_OF_C	CASH_UNITS
	The denomination is selected based upon
	criteria which ensure that over the course of
	its operation the CDM cash units will empty
	as far as possible at the same rate and will
	therefore go LOW and then EMPTY at
	approximately the same time.
WFS_CDM_MIX_MAXIMUM_NUMBER_OF	CASH_UNITS
	The denomination will be selected based upon criteria which ensures the maximum number of different logical cash units are
	used.
zName	
ints to the name of the table/algorithm used.	
1.4	1 (11) (1) 1

Error Codes Only the generic error codes defined in [Ref. 1] can be generated by this command.

Comments None.

4.7 WFS_INF_CDM_MIX_TABLE

Description This command is used to obtain the house mix table specified by the supplied mix number.

Input Param LPUSHORT lpusMixNumber;

lpusMixNumber Pointer to the number of the requested house mix table.

Output Param LPWFSCDMMIXTABLE lpMixTable;

typedef struct _wfs_cdm_mix_table

l	
USHORT	usMixNumber;
LPSTR	lpszName;
USHORT	usRows;
USHORT	usCols;
LPULONG	lpulMixHeader;
LPWFSCDMMIXROW	*lppMixRows;
} WFSCDMMIXTABLE,	*LPWFSCDMMIXTABLE;

usMixNumber

Number identifying the house mix table.

lpszName

Points to the name of the table.

usRows

Number of rows in the house mix table. There is at least one row for each distinct total amount to be denominated. If there is more than one row for an amount the first row is taken that is dispensable according to the current status of the cash units.

usCols

Number of columns in the house mix table. There is one column for each distinct item value included in the mix.

lpulMixHeader

Pointer to an array of length *usCols* of unsigned longs; each element defines the value of the item corresponding to its respective column (See WFS_INF_CDM_CURRENCY_EXP).

lppMixRows

Pointer to an array (of length usRows) of pointers to WFSCDMMIXROW structures:

typedef struct _wfs_cdm_mix_row

ι	
ULONG	ulAmount;
LPUSHORT	lpusMixture;
} WFSCDMMIXROW,	*LPWFSCDMMIXROW;

ulAmount

Amount denominated by this mix row (See WFS_INF_CDM_CURRENCY_EXP).

lpusMixture

Į

Pointer to a mix row, an array of length *usCols* of unsigned integers; each element defines the quantity of each item denomination in the mix used in the denomination of *ulAmount*.

Error Codes In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_CDM_INVALIDMIXNUMBER	The lpusMixNumber parameter does not
	correspond to a defined mix table.

Comments None.

4.8 WFS_INF_CDM_PRESENT_STATUS

Description

This command is used to obtain the status of the most recent attempt to <u>dispense and/or</u> present items to the customer. The items may have been <u>dispensed and/or</u> presented as a result of the WFS_CMD_CDM_PRESENT or WFS_CMD_CDM_DISPENSE command. <u>This status is not</u> updated as a result of any other command that can dispense/present items.

This value is persistent and is valid until the next time an attempt is made to present or dispense items to the customer.

The denominations reported by this command may not accurately reflect the operation if the cash units have been re-configured (e.g. if the values associated with a cash unit are changed, or new cash units are configured).

Input Param LPWORD lpfwPosition;

lpfwPosition

Pointer to the output position the items were presented or dispensed to as one of the following values:

Value	Meaning
WFS_CDM_POSNULL	The items were presented according to the
	default configuration.
WFS_CDM_POSLEFT	The items were presented to the left output position.
WFS_CDM_POSRIGHT	The items were presented to the right output position.
WFS_CDM_POSCENTER	The items were presented to the center output position.
WFS_CDM_POSTOP	The items were presented to the top output position.
WFS_CDM_POSBOTTOM	The items were presented to the bottom output position.
WFS_CDM_POSFRONT	The items were presented to the front output position.
WFS_CDM_POSREAR	The items were presented to the rear output position.

Output Param LPWFSCDMPRESENTSTATUS lpPresentStatus;

typedef struct _wfs_cdm_present_status
{

LPWFSCDMDENOMINATION	lpDenomination;
WORD	wPresentState;
LPSTR	lpszExtra;
<pre>WFSCDMPRESENTSTATUS,</pre>	*LPWFSCDMPRESENTSTATUS;

lpDenomination

Pointer to a WFSCDMDENOMINATION structure which contains the amount dispensed and the number of items dispensed from each cash unit. For a description of the WFSCDMDENOMINATION structure see the definition of the command WFS_CMD_CDM_DENOMINATE.

Where mixed currencies were dispensed the *ulAmount* field in the returned denomination structure will be zero and the *cCurrency* field will be set to three ASCII 0x20 characters.

wPresentState

Supplies the status of the last dispense or present operation. Possible values are:

Value	Meaning
WFS_CDM_PRESENTED	The items were presented. This status is set as soon as the customer has access to the items.
WFS_CDM_NOTPRESENTED	The customer has not had access to the items.
WFS_CDM_UNKNOWN	It is not known if the customer had access to the items.

lpszExtra

None.

Pointer to a list of vendor-specific, or any other extended, information. The information is returned as a series of *"key=value"* strings so that it is easily extensible by Service Providers. Each string is null-terminated, with the final string terminating with two null characters. An empty list may be indicated by either a NULL pointer or a pointer to two consecutive null characters.

Error Codes Only the generic error codes defined in [Ref. 1] can be generated by this command.

Comments

5.1 WFS_CMD_CDM_DENOMINATE

Description

This command provides a denomination. A denomination specifies the number of items which are required from each cash unit in order to satisfy a given amount. The denomination depends upon the currency, the mix algorithm and any partial denomination supplied by the application.

This command can also be used to validate that any denomination supplied by the application can be dispensed.

If items of differing currencies are to be included in the same denomination then the currency field must be an array of three ASCII 0x20h characters, the amount must be zero and the mix number must be WFS_CDM_INDIVIDUAL. However, these restrictions do not apply if a single currency is combined with non-currency items, such as coupons.

If the *bCashBox* field of the WFSCDMCAPS structure returned by the WFS_INF_CDM_CAPABILITIES command is TRUE then, if the entire denomination cannot be satisfied, a partial denomination will be returned with the remaining amount to be supplied from the teller's cash box.

This command can be used in four different ways:

- In order to check that it is possible to dispense a given denomination. The input parameters to the command are currency and denomination, with a mix number of WFS_CDM_INDIVIDUAL and an amount of zero. If items of differing currencies are to be dispensed then the currency field should be an array of three ASCII 0x20h characters.
- In order to validate that a given amount matches a given denomination and that it is possible to dispense the denomination. The input parameters to the command should be amount, currency and denomination, with a mix number of WFS_CDM_INDIVIDUAL.
- 3. In order to obtain a denomination of a given amount. The input parameters supplied should be amount, currency and mix number.
- 4. In order to complete a partial denomination of a given amount. In this case the input parameters to the command should be currency, amount, mix number and either a partially specified denomination or a minimum amount from the cash box. A completed denomination is returned. *ulCashBox* of the denomination structure may be updated as a result of this command.

Input Param LPWFSCDMDENOMINATE lpDenominate;

typedef struct _wfs_cdm_denominate

USHORT	usTellerID;
USHORT	usMixNumber;
LPWFSCDMDENOMINATION	lpDenomination;
} WFSCDMDENOMINATE,	*LPWFSCDMDENOMINATE;

usTellerID

Identification of teller. This parameter is ignored if the device is a Self-Service CDM.

usMixNumber

Mix algorithm or house mix table to be used.

lpDenomination

{

Pointer to a WFSCDMDENOMINATION structure, describing the contents of the denomination operation.

typedef struct _wfs_cdm_denomination

CHAR	cCurrencyID[3];
ULONG	ulAmount;
USHORT	usCount;
LPULONG	lpulValues;
ULONG	ulCashBox;
} WFSCDMDENOMINATION,	*LPWFSCDMDENOMINATION;

cCurrencyID

Identification of currency in ISO format [see Ref. 2]. Where the denomination contains multiple currencies this field should be set to three ASCII 0x20 characters.

ulAmount

The amount to be denominated or dispensed. Where the denomination contains multiple currencies this value is zero.

usCount

The size of the *lpulValues* list. This *usCount* is the same as the *usCount* returned from the last WFS_INF_CDM_CASH_UNIT_INFO command or set by the last WFS_CMD_CDM_SET_CASH_UNIT_INFO or WFS_CMD_CDM_END_EXCHANGE commands. If this value is not required because a mix algorithm is used then the *usCount* can be set to zero.

If the application passes in an invalid *usCount* the Service Provider should return a WFS ERR INVALID DATA return code.

lpulValues

Pointer to an array of ULONGs. This list specifies the number of items to take from each of the cash units. This list corresponds to the array of cash unit structures returned by the last WFS_INF_CDM_CASH_UNIT_INFO command or set by the last WFS_CMD_CDM_SET_CASH_UNIT_INFO or WFS_CMD_CDM_END_EXCHANGE commands. The first value in the array is related to the cash structure with the index number 1.

This array contains a field for each possible cash unit. If a cash unit is not required in the denomination its corresponding field in this array should be set to zero.

If the application does not wish to specify a denomination, it should set the *lpulValues* pointer to NULL.

ulCashBox

Only applies to Teller CDM devices. Amount to be paid from the teller's cash box.

Output Param LPWFSCDMDENOMINATION lpDenomination;

For a description see the input structure.

Where mixed currencies are being denominated the *ulAmount* field in the returned denomination structure will be zero and the *cCurrency* field will be set to three ASCII 0x20 characters.

Error Codes In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_CDM_INVALIDCURRENCY	There are no cash units in the CDM of the
	currency specified in the <i>cCurrency</i> field of
	the input parameter.
WFS_ERR_CDM_INVALIDTELLERID	Invalid teller ID. This error will never be
	generated by a Self-Service CDM.
WFS_ERR_CDM_CASHUNITERROR	There is a problem with a cash unit. A
	WFS_EXEE_CDM_CASHUNITERROR
	event will be posted with the details.
WFS_ERR_CDM_INVALIDDENOMINATIO	N The usMixNumber is
	WFS_CDM_INDIVIDUAL and the sum of
	the values for <u><i>ulCashBox</i></u> and the <u>items</u>
	specified by <i>lpulValues</i> does not match the
	non-zero amount specified. This error code
	is not used when the amount specified is
	zero.
WFS_ERR_CDM_INVALIDMIXNUMBER	Unknown mix algorithm.
WFS_ERR_CDM_NOCURRENCYMIX	The cash units specified in the denomination
	were not all of the same currency.
WFS_ERR_CDM_NOTDISPENSABLE	The amount is not dispensable by the CDM.
WFS_ERR_CDM_TOOMANYITEMS	The request requires too many items to be
	dispensed.
WFS_ERR_CDM_EXCHANGEACTIVE	The CDM is in an exchange state (see
	WFS CMD CDM START EXCHANGE).

Deleted: cashbox
Deleted: denomination was
greater than

	WFS_ERR_CDM_NOCASHBOXPRESENT	Cash box amount needed, however teller is not assigned a Cash Box.
	WFS_ERR_CDM_AMOUNTNOTINMIXTA	BLE
		A mix table is being used to determine the denomination but the amount specified for the denomination is not in the mix table.
Events	In addition to the generic event defined in [Ref. 1] result of this command:	, the following events can be generated as a
	Value	Meaning
	WFS_EXEE_CDM_CASHUNITERROR	An error occurred while attempting to denominate from the cash unit specified by the event.
Comments	None.	

5.2 WFS_CMD_CDM_DISPENSE

Description

This command performs the dispensing of items to the customer. The command provides the same functionality as the WFS_CMD_CDM_DENOMINATE command plus the additional functionality of dispensing the items. If items of differing currencies are to be dispensed then the currency field must be an array of three ASCII 0x20h characters, the amount must be zero and the mix number must be WFS_CDM_INDIVIDUAL. However, these restrictions do not apply if a single currency is dispensed with non-currency items, such as coupons.

The WFS_CMD_CDM_DISPENSE command can be used in the following ways:

- 1. The input parameters to the command are amount, currency and denomination. The mix number is WFS_CDM_INDIVIDUAL. In this case, the denomination is checked for validity and, if valid, is dispensed.
- 2. The input parameters are amount, currency and mix number. In this case the amount is denominated and, if this succeeds, the items are dispensed.
- 3. If the amount is zero, but the currency and the denomination are supplied with a mix number of WFS_CDM_INDIVIDUAL the denomination is checked for validity and, if valid, is dispensed.
- 4. The command will calculate a partial denomination of a given amount and dispense the complete denomination. In this case the input parameters to the command should be currency, amount, mix number and either a partially specified denomination or a minimum amount from the cash box. The cashbox amount may be updated as a result of this command.

When more than one physical cash unit exists for a logical cash unit number, the device selects the actual physical cash unit to use in the dispense operation.

If the *bCashBox* field of the WFSCDMCAPS structure returned by the WFS_INF_CDM_CAPABILITIES command is TRUE then, if the entire denomination cannot be satisfied, a partial denomination will be returned with the remaining amount to be supplied from the teller's cash box.

If the device is a Teller CDM, the input parameter *usPosition* can be set to WFS_CDM_POSNULL. If this is the case the *usTellerID* is used to perform the dispense operation to the assigned teller position.

The field *bPresent* of the WFSCDMDISPENSE structure determines whether items are actually presented to the user as part of the dispense operation. If this field is set to TRUE then the items will be moved to the exit slot, if it is FALSE the items will be moved to an intermediate stacker. In the second case it will be necessary to use the WFS_CMD_CDM_PRESENT command to present the items to the user. If *bPresent* is set to FALSE then the *fwPosition* parameter is ignored. If the CDM does not have an intermediate stacker then *bPresent* is ignored.

Input Param LPWFSCDMDISPENSE lpDispense;

typedef struct _wfs_cdm_dispense

{	
USHORT	usTellerID;
USHORT	usMixNumber;
WORD	fwPosition;
BOOL	bPresent;
LPWFSCDMDENOMINAT	ION lpDenomination;
<pre>} WFSCDMDISPENSE,</pre>	*LPWFSCDMDISPENSE;

usTellerID

Identifies the teller. This parameter is ignored if the device is a Self-Service CDM.

usMixNumber

Mix algorithm or house mix table to be used to create a denomination of the supplied amount. If the value is WFS_CDM_INDIVIDUAL, the denomination supplied in the *lpDenomination* field is validated prior to the dispense operation. If it is found to be invalid no alternative denomination will be calculated.

fwPosition

Determines to which side the amount is dispensed. If the device is a Teller CDM this field is ignored and the output position associated with *usTellerID* is used. The value is specified by one of the following values:

Value	Meaning
WFS_CDM_POSNULL	The default configuration information is
	used. This can be either position dependent
	or teller dependent.
WFS_CDM_POSLEFT	Present items to left side of device.
WFS_CDM_POSRIGHT	Present items to right side of device.
WFS_CDM_POSCENTER	Present items to center output position.
WFS_CDM_POSTOP	Present items to the top output position.
WFS_CDM_POSBOTTOM	Present items to the bottom output position.
WFS_CDM_POSFRONT	Present items to the front output position.
WFS_CDM_POSREAR	Present items to the rear output position.

bPresent

If this field is set to TRUE then the items will be moved to the exit slot, if it is FALSE the items will be moved to an intermediate stacker.

lpDenomination

Pointer to a WFSCDMDENOMINATION structure, describing the denominations used for the dispense operation. For the WFSCDMDENOMINATION structure specification see the definition of the command WFS_CMD_CDM_DENOMINATE.

Output Param LPWFSCDMDENOMINATION lpDenomination;

For the WFSCDMDENOMINATION structure specification see the definition of the command WFS_CMD_CDM_DENOMINATE.

The values in this structure report the amount dispensed and the number of items dispensed from each cash unit.

Where mixed currencies are being dispensed the *ulAmount* field in the returned denomination structure will be zero and the *cCurrency* field will be set to three ASCII 0x20 characters.

Error Codes In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_CDM_INVALIDCURRENCY	There are no cash units in the CDM of the
	currency specified in the cCurrency field of
	the input parameter.
WFS_ERR_CDM_INVALIDTELLERID	Invalid Teller ID. This error will never be
	generated by a Self-Service CDM.
WFS_ERR_CDM_CASHUNITERROR	There is a problem with a cash unit. The
	WFS_EXEE_CDM_CASHUNITERROR
	execute event is posted with the details.
WFS_ERR_CDM_INVALIDDENOMINATION	
	units was greater than the amount specified.
WFS_ERR_CDM_INVALIDMIXNUMBER	Mix algorithm is not known.
WFS_ERR_CDM_NOCURRENCYMIX	Cash units containing two or more different
	currencies were selected.
WFS_ERR_CDM_NOTDISPENSABLE	The amount is not dispensable by the CDM.
WFS_ERR_CDM_TOOMANYITEMS	The request would require too many items to
	be dispensed. This error is also generated if
	bPresent is FALSE and sub-dispensing is
	required.
WFS_ERR_CDM_UNSUPPOSITION	The specified output position is not
	supported.
WFS_ERR_CDM_SAFEDOOROPEN	The safe door is open. This device requires
	the safe door to be closed in order to perform
	this operation.
WFS_ERR_CDM_EXCHANGEACTIVE	The CDM is in an exchange state.

WFS_ERR_CDM_NOCASHBOXPRESENT	Cash box amount needed, however teller is not assigned a Cash Box.	
WFS_ERR_CDM_AMOUNTNOTINMIXTAB		
	A mix table is being used to determine the denomination but the amount specified for the denomination is not in the mix table.	
WFS_ERR_CDM_ITEMSNOTTAKEN	Items have not been taken during a sub- dispense operation. This error occurs if a hardware timeout expires.	
WFS_ERR_CDM_ITEMSLEFT	Items have been left in the transport or exit slot as a result of a prior Dispense, Present or Recycler Cash-In operation.	
If the <i>bPresent</i> field of the WFSCDMDISPENSE structure is TRUE, the following error codes can also be returned:		
WFS_ERR_CDM_SHUTTERNOTOPEN	The shutter is not open or did not open when it should have. No items presented.	
WFS_ERR_CDM_SHUTTEROPEN	The shutter is open when it should be closed. No items presented.	
WFS_ERR_CDM_PRERRORNOITEMS	An error occurred while items were being moved to the exit slot - no items are presented.	
WFS_ERR_CDM_PRERRORITEMS	An error occurred while items were being moved to the exit slot - at least some of the items have been presented.	
WFS_ERR_CDM_PRERRORUNKNOWN	An error occurred while items were being moved to the exit slot - the position of the items is unknown. Intervention may be required to reconcile the cash amount totals.	

Events In addition to the generic events defined in [Ref. 1], the following events can be generated as a result of this command:

Value	Meaning
WFS_USRE_CDM_CASHUNITTHRESHOLD	A threshold condition has been reached in one of the cash units.
WFS_EXEE_CDM_DELAYEDDISPENSE	The dispense operation will be delayed by the specified time.
WFS_EXEE_CDM_STARTDISPENSE	Fired when the delayed dispense operation starts.
WFS_EXEE_CDM_CASHUNITERROR	A cash unit caused an error during a dispense operation.
WFS_SRVE_CDM_ITEMSTAKEN	The user has removed the items presented. If the dispense is not a sub-dispense this event occurs after the completion of the dispense command.
WFS_EXEE_CDM_PARTIALDISPENSE	Indicates that the dispense operation is to be divided into several sub-dispense operations.
WFS_EXEE_CDM_SUBDISPENSEOK	A sub-dispense operation was completed successfully.
WFS_EXEE_CDM_INCOMPLETEDISPENSE	5
WFS EXEE CDM NOTEERROR	An item detection error has occurred.
WFS_EXEE_CDM_INPUT_P6	ECB6 Level 2 and/or level 3 notes have been
	detected.

Comments None.

5.3 WFS_CMD_CDM_COUNT

Description

otion This command empties the specified physical cash unit(s). All items dispensed from the cash unit are counted and moved to the specified output location.

The number of items counted can be different from the number of items dispensed in cases where the CDM has the ability to detect this information. If the CDM cannot differentiate between what is dispensed and what is counted then *ulDispensed* will be the same as *ulCounted*.

Upon successful WFS_CMD_CDM_COUNT command execution the physical cash unit(s) *ulCount* field within the WFSCDMPHCU structure is reset.

Input Param LPWFSCDMPHYSICALCU lpPhysicalCU;

typedef struct _wfs_cdm_physical_cu

ι		
	BOOL	bEmptyAll;
	WORD	fwPosition;
	LPSTR	lpPhysicalPositionName;
}	WFSCDMPHYSICALCU,	*LPWFSCDMPHYSICALCU;

bEmptyAll

Specifies whether all physical cash units are to be emptied. If this value is TRUE then *lpPhysicalPositionName* is ignored.

fwPosition

Specifies the location to which items should be moved. The value is set to one of the following values:

Value	Meaning
WFS_CDM_POSNULL	Output location is determined by Service
	Provider.
WFS_CDM_POSLEFT	Present items to left side of device.
WFS_CDM_POSRIGHT	Present items to right side of device.
WFS_CDM_POSCENTER	Present items to center output position.
WFS_CDM_POSTOP	Present items to the top output position.
WFS_CDM_POSBOTTOM	Present items to the bottom output position.
WFS_CDM_POSFRONT	Present items to the front output position.
WFS_CDM_POSREAR	Present items to the rear output position.
WFS_CDM_POSREJECT	Reject bin is used as output location.

lpPhysicalPositionName

Specifies which physical cash unit to empty and count. This name is the same as the *lpPhysicalPositionName* in the WFSCDMPHCU structure.

Output Param LPWFSCDMCOUNT lpCount;

typedef struct wfs cdm count

USHORT LPWFSCDMCOUNTEDPHYSCU } WFSCDMCOUNT, *LPWFSCDMCOUNT; usNumPhysicalCUs; *lppCountedPhysCUs;

usNumPhysicalCUs

This value indicates the number of physical cash unit structures (WFSCDMCOUNTEDPHYSCU) returned. This value will always be greater than zero.

lppCountedPhysCUs

Pointer to an array of pointers to WFSCDMCOUNTEDPHYSCU structures:

typedef struct _wfs_cdm_counted_phys_cu

ĩ		
	LPSTR	lpPhysicalPositionName;
	CHAR	cUnitId[5];
	ULONG	ulDispensed;
	ULONG	ulCounted;
	USHORT	usPStatus;
}	WFSCDMCOUNTEDPHYSCU,	*LPWFSCDMCOUNTEDPHYSCU;

Deleted: Pointer to a WFSCDMCOUNT structure:¶

lpPhysicalPositionNameSpecifies which physical cash unit was emptied and counted. This name is that defined in the *lpPhysicalPositionName* field of the WFSCDMPHCU structure. cUnitID

Cash unit ID. This is the identifier defined in the *cUnitID* field of the WFSCDMPHCU structure.

ulDispensed

The number of items that were dispensed during the emptying of the cash unit.

ulCounted

The number of items that were counted during the emptying of the cash unit.

usPStatus

Supplies the status of the physical cash unit as one of the following values:

Value	Meaning	
WFS_CDM_STATCUOK	The cash unit is in a good state.	
WFS_CDM_STATCUFULL	The cash unit is full.	
WFS_CDM_STATCUHIGH	The cash unit is almost full (reached or	
	exceeded the threshold defined by	
	WFSCDMCASHUNIT.ulMaximum).	
WFS_CDM_STATCULOW	The cash unit is almost empty.	Deleted: (threshold defined b
WFS_CDM_STATCUEMPTY	The cash unit is empty.	ulMinimum)
WFS_CDM_STATCUINOP	The cash unit is inoperative.	
WFS_CDM_STATCUMISSING	The cash unit is missing.	
WFS_CDM_STATCUNOVAL	The values of the specified cash unit are	
	not available.	
WFS_CDM_STATCUNOREF	There is no reference value available for	
	the notes in this cash unit.	
WFS_CDM_STATCUMANIP	The cash unit has been <u>inserted</u>	Deleted: changed
	(including removal followed by a	
	reinsertion) when the device was not in	
	the exchange state. This cash unit cannot	
	be dispensed from.	
e	[Ref. 1], the following error codes can be	
ated by this command:		
alue	Meaning	
FS ERR CDM CASHUNITERROR	A cash unit caused a problem A	

Error Codes

	Value	Meaning
	WFS ERR CDM CASHUNITERROR	A cash unit caused a problem. A
		WFS_EXEE CDM_CASHUNITERROR
		event will be posted with the details.
	WFS ERR CDM UNSUPPOSITION	The position specified is not supported.
	WFS ERR CDM SAFEDOOROPEN	The safe door is open. This device requires
	·····	the safe door to be closed in order to perform
		this operation.
	WFS_ERR_CDM_EXCHANGEACTIVE	The CDM service is in an exchange state.
Events	In addition to the generic events defined in [Ref. result of this command:	1], the following events can be generated as a
	Value	Meaning
	WFS_EXEE_CDM_CASHUNITERROR	A cash unit caused an error during the count
		operation.
	WFS_SRVE_CDM_ITEMSTAKEN	The items emptied to the output location
		have been removed by the user.
	WFS_SRVE_CDM_ITEMSPRESENTED	Items have been emptied to the output
		location. These items may need to be
		removed from the output location before the
		operation can continue.
	WFS_EXEE_CDM_NOTEERROR	An Items detection error has occurred.
	WFS_EXEE_CDM_INPUT_P6	ECB6 Level 2 and/or level 3 notes have been
		detected.

Comments None.

Page 39 CWA 15748-64:2008

5.4 WFS_CMD_CDM_PRESENT

Description	This command will move items to the exit position for removal by the user. If a shutter exists, then it will be implicitly controlled during the present operation, even if the <i>bShutterControl</i> capability is set to FALSE. The shutter will be closed when the user removes the items or the items are retracted. If <i>lpfwPosition</i> points to WFS_CDM_POSNULL the position set in the WFS_CMD_CDM_DISPENSE command which caused these items to be dispensed will be used.			Deleted: <i>fwPosition</i> is	set to
	When this command successfully completes the iten	-

	WFS_SRVE_CDM_ITEMSTAKEN	one of the cash units. The items have been removed by the user. This event is generated after the completion			
	WFS_EXEE_CDM_INPUT_P6	of the present operation. ECB6 Level 2 and/or level 3 notes have been detected.			
Comments	None.				

5.5 WFS_CMD_CDM_REJECT

Description	This command will move items from the intermedia			
	unit (i.e. a cash unit with usType WFS_CDM_TYPEREJECTCASSETTE). The ulCount			
	parameter of the reject cash unit is incremented by the number of items that were thought to be			
	ed by the device during the reject. Note that			
	the reject bin count is unreliable.			
Input Param	None.			
Output Param	None.			
Error Codes In addition to the generic error codes defined in [Ref. 1], the for generated by this command:		f. 1], the following error codes can be		
	Value	Meaning		
	WFS_ERR_CDM_CASHUNITERROR	The reject cash unit caused a problem. A WFS_EXEE_CDM_CASHUNITERROR event will be posted with the details.		
	WFS ERR CDM NOITEMS	There were no items on the stacker.		
	WFS_ERR_CDM_EXCHANGEACTIVE	The CDM service is in an exchange state.		
Events	In addition to the generic events defined in [Ref. 1], the following events can be generated as a result of this command:			
	Value	Meaning		
	WFS_USRE_CDM_CASHUNITTHRESHOLD	A reject bin threshold condition has been reached.		
	WFS_EXEE_CDM_CASHUNITERROR	A cash unit caused an error during the reject operation.		
	WFS_EXEE_CDM_INPUT_P6	ECB6 Level 2 and/or level 3 notes have been		
		detected.		
-				

Comments None.

5.6 WFS_CMD_CDM_RETRACT

Description This command will retract items which may have been in customer access. Retracted items will be moved to either a retract cash unit, the reject cash unit, <u>an item cash unit</u> the transport or the intermediate stacker. After the items are retracted the shutter is closed automatically, <u>even if the bShutterControl</u> capability is set to FALSE.

If items are moved to a retract cash unit (i.e. a cash unit with *usType* WFS_CDM_TYPERETRACTCASSETTE), then the *ulCount* parameter of the retract cash unit must be incremented by 1 to specify the number of retracts. If items are moved to any other cash unit (e.g. a cash unit with *usType* WFS_CDM_TYPEREJECTCASSETTE) then the *ulCount* parameter of the cash unit must be incremented by the number of items that were present at the time the WFS_CMD_CDM_RETRACT command was issued or the number counted by the device during the retract. Note that reject bin counts are unreliable.

The *bRetract* field of the WFSCDMCAPS structure specifies whether or not this command is supported.

Input Param LPWFSCDMRETRACT lpRetract;

{

typedef struct _wfs_cdm_retract

WORD	fwOutputPosition;
USHORT	usRetractArea;
USHORT	usIndex;
<pre>} WFSCDMRETRACT,</pre>	*LPWFSCDMRETRACT;

fwOutputPosition

Specifies the output position from which to retract the items. The value is set to one of the following values:

Value	Meaning
WFS_CDM_POSNULL	The default configuration information should
	be used.
WFS_CDM_POSLEFT	Retract items from the left output position.
WFS_CDM_POSRIGHT	Retract items from the right output position.
WFS_CDM_POSCENTER	Retract items from the center output
	position.
WFS_CDM_POSTOP	Retract items from the top output position.
WFS_CDM_POSBOTTOM	Retract items from the bottom output
	position.
WFS_CDM_POSFRONT	Retract items from the front output position.
WFS_CDM_POSREAR	Retract items from the rear output position.

usRetractArea

This value specifies the area to which the items are to be retracted. Possible values are:

Value	Meaning
WFS_CDM_RA_RETRACT	Retract the items to a retract cash unit.
WFS_CDM_RA_TRANSPORT	Retract the items to the transport.
WFS_CDM_RA_STACKER	Retract the items to the intermediate stacker
	area.
WFS_CDM_RA_REJECT	Retract the items to a reject cash unit.
WFS_CDM_RA_ITEMCASSETTE	Retract the items to the item cassettes, i.e.
	cassettes that can be dispensed from.

usIndex

If *usRetractArea* is set to WFS_CDM_RA_RETRACT this field is the logical retract position inside the container into which the cash is to be retracted. This logical number starts with a value of one (1) for the first retract position and increments by one for each subsequent position. If the container contains several logical retract cash units (of type

WFS_CDM_TYPERETRACTCASSETTE in command WFS_INF_CDM_CASH_UNIT_INFO), usIndex would be incremented from the first position of the first retract cash unit to the last position of the last retract cash unit defined in WFSCDMCUINFO. The maximum value of usIndex is the sum of <u>WFSCDMCASHUNIT_ulMaximum</u> of each retract cash unit. If usRetractArea is not set to WFS_CDM_RA_RETRACT the value of this field is ignored.

Output Param None.

Error Codes	In addition to the generic error codes defined in [Ref. 1], the following error codes can be
	generated by this command:

	Value	Meaning
	WFS_ERR_CDM_CASHUNITERROR	The retract cash unit caused a problem. A
		WFS_EXEE_CDM_CASHUNITERROR event will be posted with the details.
	WFS_ERR_CDM_NOITEMS	There were no items to retract.
	WFS_ERR_CDM_EXCHANGEACTIVE	The CDM is in an exchange state.
	WFS_ERR_CDM_SHUTTERNOTCLOSED	The shutter failed to close.
	WFS_ERR_CDM_ITEMSTAKEN	Items were present at the output position at
		the start of the operation, but were removed
		before the operation was complete - some or
	WFS ERR CDM INVALIDRETRACTPOSIT	all of the items were not retracted.
	WF5_EKK_CDM_INVALIDKETKACTFOSH	The <i>usIndex</i> is not supported.
	WFS_ERR_CDM_NOTRETRACTAREA	The retract area specified in <i>usRetractArea</i> is
		not supported.
Events	In addition to the generic events defined in [Ref. 1] result of this command:	, the following events can be generated as a
	Value	Meaning
	WFS_USRE_CDM_CASHUNITTHRESHOLD	A threshold condition has been reached in
		the retract or reject cash unit.
	WFS_EXEE_CDM_CASHUNITERROR	An error occurred while attempting to retract
		to the retract or reject cash unit.
	WFS_SRVE_CDM_ITEMSTAKEN	The items presented have been removed by
	WES EVER ODM INDUT DO	the user.
	WFS_EXEE_CDM_INPUT_P6	ECB6 Level 2 and/or level 3 notes have been detected.

Comments None.

5.7 WFS_CMD_CDM_OPEN_SHUTTER

Description This command opens the shutter.

Input Param LPWORD lpfwPosition;

lpfwPosition

Pointer to the output position where the shutter is to be opened. If the application does not need to specify a shutter, this field can be set to NULL or its contents to WFS_CDM_POSNULL.The position can be set to one of the following values:

	Value	Meaning
	WFS_CDM_POSNULL	The default configuration information should
		be used.
	WFS_CDM_POSLEFT	Open the shutter at the left output position.
	WFS_CDM_POSRIGHT	Open the shutter at the right output position.
	WFS_CDM_POSCENTER	Open the shutter at the center output position.
	WFS_CDM_POSTOP	Open the shutter at the top output position.
	WFS_CDM_POSBOTTOM	Open the shutter at the bottom output position.
	WFS_CDM_POSFRONT	Open the shutter at the front output position.
	WFS_CDM_POSREAR	Open the shutter at the rear output position.
Output Param	None.	
Error Codes	In addition to the generic error codes defined in [Regenerated by this command:	ef. 1], the following error codes can be
	Value	Meaning
	WFS_ERR_CDM_UNSUPPOSITION	The position specified is not supported.
	WFS_ERR_CDM_SHUTTERNOTOPEN	The shutter failed to open.
	WFS_ERR_CDM_SHUTTEROPEN	The shutter was already open.

Only the generic events defined in [Ref. 1] can be generated by this command.

WFS_ERR_CDM_EXCHANGEACTIVE

The CDM is in an exchange state.

Comments None.

Events

5.8 WFS_CMD_CDM_CLOSE_SHUTTER

Description This command closes the shutter.

Input Param LPWORD lpfwPosition;

lpfwPosition

Pointer to the output position where the shutter is to be closed. If the application does not need to specify a shutter, this field can be set to NULL or its contents to WFS_CDM_POSNULL. The position can be set to one of the following values:

	Value	Meaning
	WFS_CDM_POSNULL	The default configuration information should be used
	WFS_CDM_POSLEFT	Close the shutter at the left output position.
	WFS_CDM_POSRIGHT	Close the shutter at the right output position.
	WFS_CDM_POSCENTER	Close the shutter at the center output position.
	WFS_CDM_POSTOP	Close the shutter at the top output position.
	WFS_CDM_POSBOTTOM	Close the shutter at the bottom output position.
	WFS_CDM_POSFRONT	Close the shutter at the front output position.
	WFS_CDM_POSREAR	Close the shutter at the rear output position.
Output Param	None.	
Error Codes	In addition to the generic error codes defined in [R generated by this command:	ef. 1], the following error codes can be

	Value	Meaning
	WFS_ERR_CDM_UNSUPPOSITION	The position specified is not supported.
	WFS_ERR_CDM_SHUTTERCLOSED	The shutter was already closed.
	WFS_ERR_CDM_SHUTTERNOTCLOSED	The shutter failed to close.
	WFS_ERR_CDM_EXCHANGEACTIVE	The CDM is in an exchange state.
Events	Only the generic events defined in [Ref. 1] can be g	generated by this command.

Comments None.

5.9 WFS_CMD_CDM_SET_TELLER_INFO

Description	This command allows the application to set the tel currency assigned to the teller. The values set by the applies to Teller CDMs.	
Input Param	1 LPWFSCDMTELLERUPDATE lpTellerUpdate;	
	typedef struct _wfs_cdm_teller_update	
	{ USHORT usActi LPWFSCDMTELLERDETAILS lpTell } WFSCDMTELLERUPDATE, *LPWFSCDMT	erDetails;
	<i>usAction</i> The action to be performed specified as one of the	following values:
	Value	Meaning
	WFS_CDM_CREATE_TELLER WFS_CDM_MODIFY_TELLER	A teller is to be added. Information about an existing teller is to be modified.
	WFS_CDM_DELETE_TELLER	A teller is to be removed.
	<i>lpTellerDetails</i> For a specification of the structure WFSCDMTEL WFS_INF_CDM_TELLER_INFO command.	LERDETAILS please refer to the
Output Param	None.	
Error Codes	In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:	
	Value	Meaning
	WFS_ERR_CDM_INVALIDCURRENCY	The specified currency is not currently available.
	WFS_ERR_CDM_INVALIDTELLERID	The teller ID is invalid. <u>This error will never</u> be generated by a Self-Service CDM.
	WFS_ERR_CDM_UNSUPPOSITION WFS_ERR_CDM_EXCHANGEACTIVE	The position specified is not supported. The target teller is currently in the middle of an exchange operation.
Events	In addition to the generic events defined in [Ref. 1 result of this command:], the following events can be generated as a
	Value	Meaning
	WFS_SRVE_CDM_TELLERINFOCHANGE	D Teller information has been created, modified or deleted.
Comments	None.	

5.10 WFS_CMD_CDM_SET_CASH_UNIT_INFO

	WFS EXEE CDM CASHUNITERROR	An error occurred while accessing a cash
		<u>unit.</u>
C	Nama	

Comments None.

5.11 WFS_CMD_CDM_START_EXCHANGE

Description

This command puts the CDM in an exchange state, i.e. a state in which cash units can be emptied, replenished, removed or replaced. Other than the updates which can be made via the WFS_CMD_CDM_SET_CASH_UNIT_INFO command all changes to a cash unit must take place while the cash unit is in an exchange state.

This command returns current cash unit information in the form described in the documentation of the WFS_INF_CDM_CASH_UNIT_INFO command. This command will also initiate any physical processes which may be necessary to make the cash units accessible. Before using this command an application should first have ensured that it has exclusive control of the CDM.

This command may return WFS_SUCCESS even if WFS_EXEE_CDM_CASHUNITERROR events are generated. If this command returns WFS_SUCCESS or WFS_ERR_CDM_EXCHANGEACTIVE the CDM is in an exchange state.

While in an exchange state the CDM will process all WFS requests but exclude WFS[Async]Execute commands, except those listed below:

WFS_CMD_CDM_END_EXCHANGE

WFS_CMD_CDM_SET_MIX_TABLE

Any other <u>WFS[Async]Execute</u> commands will result in the error WFS ERR CDM_EXCHANGEACTIVE being generated.

If an error is returned by this command, the WFS_CMD_CDM_CASH_UNIT_INFO command should be used to determine cash unit information.

If the CDM is part of a compound device together with a CIM (i.e. a cash recycler), exchange operations <u>can either</u> be performed separately on each <u>interface to the compound device</u> or the entire exchange operation can be done through the CIM interface.

Exchange via CDM and CIM interfaces

<u>If the exchange is performed separately via the CDM and CIM interfaces then these operations</u> cannot be performed simultaneously. An exchange state must therefore be initiated on each interface in the following sequence:

CDM

(Lock) WFS_CMD_CDM_START_EXCHANGE ...exchange action... WFS_CMD_CDM_END_EXCHANGE (Unlock)

CIM

(Lock) WFS_CMD_CIM_START_EXCHANGE ...exchange action... WFS_CMD_CIM_END_EXCHANGE (Unlock)

In the case of a recycler, the cash-in cash unit counts are set via the CIM interface and the cashout cash unit counts are set via the CDM interface. Recycling cash units can be set via either interface. However, if the device has recycle units of multiple currencies and/or denominations (or multiple note identifiers associated with the same denomination) then the CIM interface should be used for exchange operations which affect these units. Those fields which are not common to both the CDM and CIM cash units are left unchanged when an exchange (or WFS_CMD_XXX_SET_CASH_UNIT_INFO) is executed on the other interface. For example if the CDM is used to set the current counts then the CIM *lpNoteNumberList* structure is not changed even if the data becomes inconsistent.

Exchange via the CIM Interface

Deleted: In the case of selfconfiguring cash units which are designed to be replaced with no operator intervention the application should use some trigger to initiate an exchange state when appropriate. For instance, the WFS_SRVE_SAFE_DOOR_OPE N event could trigger the application to call WFS_CMD_CDM_START_EXC HANGE. ¶

		detected.	I
Comments	None.		

5.13 WFS_CMD_CDM_OPEN_SAFE_DOOR

Description	This command unlocks the safe door or starts the time delay count down prior to unlocking the safe door, if the device supports it. The command completes when the door is unlocked or the timer has started.	
Input Param	None.	
Output Param	None.	
Error Codes	In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:	
	Value	Meaning
	WFS_ERR_CDM_EXCHANGEACTIVE	The CDM is in an exchange state.
Events	Only the generic events defined in [Ref. 1] can be generated by this command.	
Comments	None.	

5.14 WFS_CMD_CDM_CALIBRATE_CASH_UNIT

Description This command will cause a vendor dependent sequence of hardware events which will calibrate one or more physical cash units associated with a logical cash unit. This is necessary if a new type of bank note is put into the cash unit as the command enables the CDM to obtain the measures of the new bank notes.

If more than one physical cash unit is associated with the cash unit, it is up to the Service Provider to determine whether all the physical cash units need to be calibrated or if it is sufficient to calibrate for one physical unit and load the data into the others.

This command cannot be used to calibrate cash units which have been locked by the application. A WFS_ERR_CDM_CASHUNITERROR code will be returned and the WFS_EXEE_CDM_CASHUNITERROR event generated.

Input Param LPWFSCDMCALIBRATE lpCalibrateIn;

typedef struct _wfs_cdm_calibrate
{

USHORT	usNumber;
USHORT	usNumOfBills;
LPWFSCDMITEMPOSITION	*lpPosition;
} WFSCDMCALIBRATE, *L1	PWFSCDMCALIBRATE;

usNumber

The logical number of the cash unit.

usNumOfBills

The number of bills to be dispensed during the calibration process.

lpPosition

Specifies where the dispensed items should be moved to. For a description of the WFSCDMITEMPOSITION structure see Section WFS_CMD_CDM_RESET.

Output Param LPWFSCDMCALIBRATE lpCalibrateOut;

The WFSCDMCALIBRATE structure is defined in the Input Param section.

usNumber

The logical number of cash unit which has been calibrated.

usNumOfBills

Number of items that were actually dispensed during the calibration process. This value may be different from that passed in using the input structure if the cash dispenser always dispenses a default number of bills. When bills are presented to an output position this is the count of notes presented to the output position, any other notes rejected during the calibration process are not included in this count as they will be accounted for within the cash unit counts.

lpPosition

Specifies where the items were moved to during the calibration process.

Error Codes In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS ERR CDM CASHUNITERROR	A cash unit caused an error. A
	WFS_EXEE_CDM_CASHUNITERROR
	event will be sent with the details.
WFS ERR CDM UNSUPPOSITION	The position specified is not valid.
WFS ERR CDM EXCHANGEACTIVE	The CDM is in an exchange state.
WFS ERR CDM INVALIDCASHUNIT	The cash unit number specified is not vali

Events In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value Meaning
WFS_USRE_CDM_CASHUNITTHRESHOLD A threshold condition has been reached in
one of the cash units.

WFS_SRVE_CDM_CASHUNITINFOCHANGED

A cash unit was changed. WFS_EXEE_CDM_CASHUNITERROR WFS_SRVE_CDM_ITEMSTAKEN WFS_EXEE_CDM_NOTEERROR A cash unit caused an error. The items were removed. An item detection error has occurred. ECB6 Level 2 and/or level 3 notes have been WFS EXEE CDM INPUT P6 detected.

Comments

None.

5.15 WFS_CMD_CDM_SET_MIX_TABLE

Description	This command is used to set up the mix table specified by the mix number. Mix tables are persistent and are available to all applications in the system. An amount can be specified as different denominations within the mix table. If the amount is specified more than once the Service Provider will attempt to denominate or dispense the first amount in the table. If this does not succeed (e.g. because of a cash unit failure) the Service Provider will attempt to denominate or dispense the next amount in the table. The Service Provider can only dispense amounts which are explicitly mentioned in the mix table.		
	If a mix number passed in already exists then the information is overwritten with the new information.		
	The values set by this command are persistent.		
Input Param	LPWFSCDMMIXTABLE lpMixTable;		
	The structure WFSCDMMIXTABLE is defined in the documentation of the command WFS_INF_CDM_MIX_TABLE.		
Output Param	None.		
Error Codes	In addition to the generic error codes defined in [Regenerated by this command:	ef. 1], the following error codes can be	
	Value	Meaning	
	WFS_ERR_CDM_INVALIDMIXNUMBER	The supplied <i>usMixNumber</i> is reserved for a predefined mix algorithm.	
	WFS_ERR_CDM_INVALIDMIXTABLE	The contents of at least one of the defined rows of the mix table is incorrect.	Deleted: WFS_ERR_CDM_EX CHANGEACTIVE , The CDM is in an exchange state.¶
Events	Only the generic events defined in [Ref. 1] can be g	generated by this command.	
Comments	None.		

5.16 WFS_CMD_CDM_RESET

Description	This command is used by the application to perform a hardware reset which will attempt to return the CDM device to a known good state. This command does not over-ride a lock obtained through WFS[Async]Lock on another application or service handle.
	The device will attempt to move any items found anywhere within the device to the cash unit or output position specified in the <i>lpResetIn</i> parameter. This may not always be possible because of hardware problems.
	If items are found inside the device the WFS_SRVE_CDM_MEDIADETECTED event will be generated and will inform the application where the items were actually moved to.
	If an exchange state is active then this command will end the exchange state (even if this command does not complete successfully).
	If items are moved to a retract cash unit (i.e. a cash unit with <i>usType</i> <u>WFS_CDM_TYPERETRACTCASSETTE</u>), then the <i>ulCount</i> parameter of the retract cash unit must be incremented by 1 to specify the number of operations that changed the count. If items are moved to any other cash unit (e.g. a cash unit with <i>usType</i> WFS_CDM_TYPEREJECTCASSETTE), then the <i>ulCount</i> parameter of the cash unit must be
	incremented either by the number of items that were present at the time the WFS_CMD_CDM_RESET command was issued or the number counted by the device during the WFS_CMD_CDM_RESET command. Note that reject bin counts are unreliable.
Input Param	LPWFSCDMITEMPOSITION lpResetIn;
	typedef strugt wfs sdm itemposition

typedef struct _wfs_cdm_itemposition

l	
USHORT	usNumber;
LPWFSCDMRETRACT	lpRetractArea;
WORD	fwOutputPosition;
} WFSCDMITEMPOSITION	*LPWFSCDMITEMPOSITION;

usNumber

The *usNumber* of the cash unit to which items found inside the CDM are to be moved. If the items are to be moved to an output position this value is zero and the output position is defined by *fwOutputPosition*.

lpRetractArea

This field is only used if the cash unit specified by *usNumber* is a retract cash unit. In all other cases this field is set to NULL. For a description of this structure see the WFSCDMRETRACT structure defined in WFS_CMD_CDM_RETRACT.

fwOutputPosition

The output position to which items are to be moved. If the *usNumber* is non-zero then this field will be ignored. The value is specified as one of the following values:

Value Meaning WFS_CDM_POSNULL The default configuration. WFS_CDM_POSLEFT The left output position. WFS CDM POSRIGHT The right output position. WFS_CDM_POSCENTER The center output position. WFS CDM POSTOP The top output position. WFS_CDM_POSBOTTOM The bottom output position. WFS CDM POSFRONT The front output position. WFS_CDM_POSREAR The rear output position.

If the application does not wish to specify a cash unit or position it can set <u>*pResetIn*</u> to <u>NULL</u>. In this case the Service Provider will determine where to move any items found.

Output Param None.

Error Codes

les In addition to the generic error codes defined in [Ref. 1] the following can be generated by this command:

Value

١

Value	Meaning
WFS_ERR_CDM_CASHUNITERROR	A cash unit caused an error.

Deleted: , nor can it be performed while the CDM is in the exchange state

Deleted: this value

WFS_ERR_CDM_UNSUPPOSITION WFS_ERR_CDM_INVALIDCASHUNIT The position specified is not supported. The cash unit number specified is not valid.

Events In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value	Meaning
WFS_USRE_CDM_CASHUNITTHRESHOLD	A threshold condition has been reached in
	one of the cash units.
WFS_EXEE_CDM_CASHUNITERROR	A cash unit caused an error.
WFS_SRVE_CDM_MEDIADETECTED	Media has been found in the device.
WFS SRVE CDM ITEMSTAKEN	The items presented have been removed by
	the user.
WFS EXEE CDM INPUT P6	ECB6 Level 2 and/or level 3 notes have been
	detected.

Comments None.

Deleted: WFS_ERR_CDM_EX CHANGEACTIVE . The CDM is in the exchange state.¶

5.17 WFS_CMD_CDM_TEST_CASH_UNITS

Description	This command is used to test cash units following	replenishment. All physical cash units which		
	are testable (i.e. that have a status of WFS_CDM_	STATCUOK or WFS_CDM_STATCULOW	Deleted: tested

5 19 WES CMD CDM POWER SAVE CONTROL

5.20 <u>WFS</u>	CMD CDM PREPARE DISF	PENSE
Description	On some hardware it can take a significant amount of time for the dispenser to get ready to dispense media. On this type of hardware the WFS_CMD_CDM_PREPARE_DISPENSE command can be used to improve transaction performance.	
	improve the time taken to dispense m knows that a dispense is likely to hap	<u>e bPrepareDispense capability) then applications can help to</u> nedia by issuing this command as soon as the application open. This command either prepares the device for the next dispense preparation if the subsequent dispense operation is
		D_CDM_DENOMINATE command, which will not stop the mmand on CDM or CIM will automatically stop the dispense
	If this command is executed and the execution will have no effect and will	device is already in the specified <i>wAction s</i> tate, then this <u>1 complete with WFS_SUCCESS.</u>
Input Param	LPWFSCDMPREPAREDISPENSE	lpPrepareDispense;
	{ WORD wAction; } WFSCDMPREPAREDISPENSE, *LPWFSCDMPREPAREDISPENSE; wAction A value specifying the type of actions. The value is set to one of the following values:	
	Value	Meaning
	WFS CDM START	Initiates the action to prepare for the next
	WFS_CDM_STOP	dispense command. This command does not wait until the device is ready to dispense before returning a completion event, it completes as soon as the preparation has been initiated. Stops the previously activated dispense preparation. For example the motor of the transport will be stopped. This should be used if for some reason the subsequent dispense operation is no longer required.
Output Param	None.	
Error Codes	Only the generic error codes defined in [Ref. 1] can be generated by this command.	
Error Coucs	Only the generic events defined in [Ref. 1] can be generated by this command.	
Events	Only the generic events defined in [R	tef. 1] can be generated by this command.

6. Events

6.1 WFS_SRVE_CDM_SAFEDOOROPEN

Description This service event is generated when the safe door has been opened.

Event Param None.

Comments None.

6.2 WFS_SRVE_CDM_SAFEDOORCLOSED

Description This service event is generated when the safe door has been closed.

Event Param None.

Comments None.

6.3 WFS_USRE_CDM_CASHUNITTHRESHOLD

Description	This user event is generated when a threshold condition has occurred in one of the cash units. If the cash unit is a shared cash unit in a compound CIM/CDM then this event can also be generated as a result of a CIM operation.
Event Param	LPWFSCDMCASHUNIT lpCashUnit;
	<i>lpCashUnit</i> Pointer to WFSCDMCASHUNIT structure, describing the cash unit on which the threshold condition occurred. See <i>lpCashUnit->usStatus</i> for the current status. For a description of the WFSCDMCASHUNIT structure, see the definition of the WFS_INF_CDM_CASH_UNIT_INFO command.
Comments	None.

6.4 WFS_SRVE_CDM_CASHUNITINFOCHANGED

Description	This service event is generated when information about a physical or logical cash unit has changed. For instance, a physical cash unit may have been removed or inserted. This event will also be posted <u>for every cash unit changed in any way (including changes to counts, e.g. ulCount, ulRejectCount, ulInitialCount, ulDispensedCount and ulPresentedCount) as a result of the following commands:</u>	Deleted: on successful completion
	WFS_CMD_CDM_SET_CASH_UNIT_INFO WFS_CMD_CDM_END_EXCHANGE	
	This event will also be fired when any change is made to a cash unit by the following commands, except for changes to counts (e.g. <i>ulCount, ulRejectCount, ulInitialCount, ulDispensedCount</i> and <i>ulPresentedCount</i>), or if the WFS_USRE_CDM_CASHUNITTHRESHOLD is more appropriate:	
	WFS_CMD_CDM_CALIBRATE_CASH_UNIT WFS_CMD_CDM_TEST_CASH_UNITS	
	If the cash unit is shared cash unit in a compound CIM/CDM then this event can also be generated as a result of a CIM operation.	
	When a physical cash unit is removed, the status of the physical cash unit becomes WFS_CDM_STATCUMISSING. If there are no physical cash units of the same logical type remaining the status of the logical type becomes WFS_CDM_STATCUMISSING.	
1	When a physical cash unit is inserted and this physical cash unit is of an existing logical type, <u>both the logical and</u> the physical cash unit structures will be updated.	
	If a physical cash unit of a new logical type is inserted, the cash unit structure reported by the last <u>WFS_INF_CDM_CASH_UNIT_INFO</u> command is no longer valid. In that case an application should issue a WFS_INF_CDM_CASH_UNIT_INFO command after receiving this event to obtain updated cash unit information.	Deleted: , the <i>usNumber</i> of the changed cash unit structure pointed to by <i>lpCashUnit</i>
Event Param	LPWFSCDMCASHUNIT lpCashUnit;	
	<i>lpCashUnit</i> Pointer to the changed cash unit structure. For a description of the WFSCDMCASHUNIT structure see the definition of the WFS_INF_CDM_CASH_UNIT_INFO command.	
Comments	None.	

6.5 WFS_SRVE_CDM_TELLERINFOCHANGED

Description	This service event is generated when the counts assigned to a teller have changed. This event is only returned as a result of a WFS_CMD_CDM_SET_TELLER_INFO command.
Event Param	LPUSHORT lpusTellerID;
	<i>lpusTellerID</i> Pointer to an unsigned short holding the ID of the teller whose counts have changed.
Comments	None.

6.6 WFS_EXEE_CDM_DELAYEDDISPENSE

Description	This execute event is generated if the start of a dispense operation has been delayed.	
Event Param	n LPULONG lpulDelay;	
	<i>lpulDelay</i> Pointer to the time in milliseconds by which the dispense operation will be delayed.	
Comments	None.	

6.7 WFS_EXEE_CDM_STARTDISPENSE

Description	This execute event is generated when a delayed dispense operation begins.		
Event Param	LPREQUESTID lpReqID;		
	<i>lpReqID</i> Pointer to the <i>RequestID</i> of the original dispense command.		
Comments	None.		

6.8 WFS_EXEE_CDM_CASHUNITERROR

Description	This execute event is generated if there is a problem with a cash unit during <u>the execution of a</u> <u>command</u> .		Deleted: denominate or dispense
Event Param	LPWFSCDMCUERROR lpCashUnitError;		operation
	typedef struct _wfs_cdm_cu_error { WORD wFail	lure; shUnit; ROR;	
	<i>wFailure</i> Specifies the kind of failure that occurred in the cash unit. Values are:		
	Value	Meaning	
	WFS_CDM_CASHUNITEMPTY	Specified cash unit is empty.	
	WFS_CDM_CASHUNITERROR	Specified cash unit has malfunctioned.	
	WFS_CDM_CASHUNITFULL	Specified cash unit is full.	
1	WFS_CDM_CASHUNITLOCKED	Specified cash unit is locked.	
I	WFS_CDM_CASHUNITINVALID	Specified cash unit is invalid.	Deleted: ID
	WFS_CDM_CASHUNITCONFIG	An attempt has been made to change the settings of a self-configuring cash unit.	
	WFS_CDM_CASHUNITNOTCONF	Specified cash unit is not configured.	
	<i>lpCashUnit</i> Pointer to the cash unit structure that caused the problem. The WFSCDMCASHUNIT structure is defined in the documentation of the WFS_INF_CDM_CASH_UNIT_INFO command. It is possible that this pointer may be NULL if the <i>wFailure</i> field is WFS_CDM_CASHUNITINVALID.		
Comments	None.		

WFS_SRVE_CDM_ITEMSTAKEN 6.9

Description	on This service event is generated when items presented to the user have been taken. This event	
	be generated at any time.	

Event Param LPWORD lpfwPosition;

lpfwPosition The output position from which the items have been removed. Possible values are:

Value	Meaning
WFS_CDM_POSNULL	The default configuration.
WFS_CDM_POSLEFT	The left output position.
WFS_CDM_POSRIGHT	The right output position.
WFS_CDM_POSCENTER	The center output position.
WFS_CDM_POSTOP	The top output position.
WFS_CDM_POSBOTTOM	The bottom output position.
WFS_CDM_POSFRONT	The front output position.
WFS_CDM_POSREAR	The rear output position.

Comments

None.

6.10 WFS_SRVE_CDM_COUNTS_CHANGED

Description	This service event is generated if the device is a compound device together with a CIM and the counts in a shared cash unit have changed as a result of <u>any CIM</u> operation <u>other than</u> <u>WFS_CMD_CIM_SET_CASH_UNIT_INFO and WFS_CMD_CIM_END_EXCHANGE</u> .		
Event Param	Param LPWFSCDMCOUNTSCHANGED lpCountsChanged;		
	<pre>typedef struct _wfs_cdm_counts_changed { USHORT usCount; LPUSHORT lpusCUNumList; } WFSCDMCOUNTSCHANGED, *LPWFSCDMCOUNTSCHANGED;</pre>		
	usCount The size of <i>lpusCUNumList</i> .		
	<i>lpusCUNumList</i> A list of the <i>usNumbers</i> of the cash units whose counts have changed.		
Comments	None.		

cash-in

6.11 WFS_EXEE_CDM_PARTIALDISPENSE

Description	This execute event is generated when a dispense operation is divided into several sub-dispense operations because the hardware capacity of the CDM is exceeded.	
Event Param	LPUSHORT lpusDispNum; <i>lpusDispNum</i> Pointer to the number of sub-dispense operations into which the dispense operation has been divided.	
Comments	None.	

6.12 WFS_EXEE_CDM_SUBDISPENSEOK

Description	is execute event is generated when one of the sub-dispense operations into which the dispense eration was divided has finished successfully.	
Event Param	LPWFSCDMDENOMINATION lpDenomination;	
	<i>lpDenomination</i> The WFSCDMDENOMINATION structure is defined in the documentation of the command WFS_CMD_CDM_DENOMINATE. Note that in this case the values in this structure report the amount and number of each denomination dispensed in the sub-dispense operation.	

Comments None.

6.13 WFS_EXEE_CDM_INCOMPLETEDISPENSE

Description	This execute event is generated when not all of the items specified in a WFS_CMD_CDM_DISPENSE operation could be dispensed. Some of the items have been dispensed. If the device has no intermediate stacker then the items that were dispensed will be in customer access.
Event Param	LPWFSCDMDENOMINATION lpDenomination;
	<i>lpDenomination</i> The WFSCDMDENOMINATION structure is defined in the documentation of the command WFS_CMD_CDM_DENOMINATE. Note that in this case the values in this structure report the amount and number of each denomination that has actually been dispensed.
Comments	None.

6.14 WFS_EXEE_CDM_NOTEERROR

	Description	This execute event specifies the reason for a note d command.	Deleted: an exchange or dispense operation	
	Event Param	LPUSHORT lpusReason;		
I		<i>lpusReason</i> <u>Pointer to</u> the reason for the notes detection error. 1	Deleted: Specifies	
		Value Meaning		
		WFS_CDM_DOUBLENOTEDETECTED	Double notes have been detected.	
		WFS_CDM_LONGNOTEDETECTED	A long note has been detected.	
		WFS_CDM_SKEWEDNOTE	A skewed note has been detected.	
		WFS_CDM_INCORRECTCOUNT	An item counting error has occurred.	
		WFS_CDM_NOTESTOOCLOSE	Notes have been detected as being too close.	
		WFS CDM OTHERNOTEERROR An item error not covered by the other		
		values has been detected.		
		WFS_CDM_SHORTNOTEDETECTED	Short notes have been detected.	
	Comments	None.		

6.15 WFS_SRVE_CDM_ITEMSPRESENTED

Description This service event specifies that items have been presented to the user during a count operation and need to be taken.

Event Param None.

Comments None.

6.16 WFS_SRVE_CDM_MEDIADETECTED

Description	This service event is generated if media is detected during a reset (WFS_CMD_CDM_RESET). The parameter on the event informs the application of the position of the media after the reset completes. If the device has been unable to successfully move the items found then this parameter will be NULL.
Event Param	LPWFSCDMITEMPOSITION *lpItemPosition;
	For a description of this parameter see WFS_CMD_CDM_RESET.
Comments	None.

6.17 WFS EXEE CDM INPUT P6

 Description
 This execute event is generated if level 2 and/or level 3 notes are detected during execution of a CDM command. Details about the notes detected and their associated signatures are obtained through the CIM interface.

Event Param None.

Comments None.

Description	This service event reports that the device has cha	nged its position status.		
Event Param	LPWFSCDMDEVICEPOSITION lpDevicePosition;			
	typedef struct _wfs_cdm_device_posit:	ion		
	{WORD wPosi	tion		
	WORD wPosition; WFSCDMDEVICEPOSITION, *LPWFSCDMDEVICEPOSITION;			
	wPosition			
	Position of the device as one of the following values:			
	Value	Meaning		
	WFS CDM DEVICEINPOSITION	The device is in its normal operating		
		position.		
	WFS_CDM_DEVICENOTINPOSITION	The device has been removed from its		
		normal operating position.		
	WFS_CDM_DEVICEPOSUNKNOWN	The position of the device cannot be		
	determined.			

6.19 WFS SRVE CDM POWER SAVE CHANGE

Description	This service event specifies that the power save recovery time has changed.			
Event Param	LPWFSCDMPOWERSAVECHANGE lpPowerSaveChange;			
	typedef struct _wfs_cdm_power_save_change			
	<pre> { USHORT usPowerSaveRecoveryTime; WFSCDMPOWERSAVECHANGE, *LPWFSCDMPOWERSAVECHANGE; }</pre>			
	<u>usPowerSaveRecoveryTime</u> Specifies the actual number of seconds required by the device to resume its normal operational state. This value is zero if the device exited the power saving mode.			
Comments	None.			

7. Sub-Dispensing Command Flow

"Sub-dispensing" of bills occur when a WFS_CMD_CDM_DISPENSE execute command is issued and the required number of bills to be dispensed exceeds the CDM hardware limit for bills that can be dispensed with a single "hardware level" dispense command. In this situation, the CDM Service Provider determines the number of "hardware level" dispense commands required and enters what is referred to as a "sub-dispensing" operation until the full amount has been dispensed. Through use of a "sub-dispensing" operation the application is fully removed from "hardware level dependencies" as to how many bills can be dispensed based on hardware vendor design limitations.

The following series of tables illustrate the steps taken on behalf of an end-user, application, XFS Service Provider, and CDM hardware for sub-dispensing operations: All examples below assume the *bPresent* parameter in the WFS_CMD_CDM_DISPENSE command is set to TRUE.

Sub-Dispensing Is Not Required - Transaction Successful

This table illustrates a successful WFS_CMD_CDM_DISPENSE command where sub-dispensing is not required:

Step	End-User	Application	XFS SP	CDM Hardware
1.	User wants to dispense \$40.00 USD			
2.		WFS_CMD_CDM_DISPENSE command issued.		
3.			Determines that a single "hardware level" dispense command can be issued for full dispense request.	
4.			"Hardware level" dispense command issued.	
5.				Items presented.
6.		WFS_CMD_CDM_DISPENSE completes successfully.		
7.	User takes bills.			
8.			WFS_SRVE_CDM_ITEMSSTAKE N event generated.	

Sub-Dispensing Is Required - Command Successful This table illustrates a successful WFS_CMD_CDM_DISPENSE command where sub-dispensing is required:

Ste p	End-User	Application	XFS SP	CDM Hardware
1.	User wants to dispense \$130 USD in \$1 USD denominations.			
2.		WFS_CMD_CDM_DISPENSE command issued.		
3.			Three "hardware level" dispense commands are required. CDM hardware is limited to dispensing 50 bills in any single "hardware level" dispense	
4.			WFS_EXEE_CDM_PARTIALDISPE NSE event generated.	
5.			"Hardware level" dispense command issued for \$50 USD.	
6.				Items presented.
7.			WFS_SRVE_CDM_SUBDISPENSE OK event generated.	
8.	User takes bills.			
9.			WFS_SRVE_CDM_ITEMSTAKEN event generated.	
10.			"Hardware level" dispense command issued for \$50 USD.	
11.				Items presented.
12.			WFS_SRVE_CDM_SUBDISPENSE OK event generated.	
13.	User takes bills			
14.			WFS_SRVE_CDM_ITEMSTAKEN event generated.	
15.			"Hardware level" dispense command issued for \$30 USD	
16.				Items presented.
17.			WFS_SRVE_CDM_SUBDISPENSE OK event generated.	
18.		WFS_CMD_CDM_DISPENSE completes successfully.		
19.	User takes bills			
20.			WFS_SRVE_CDM_ITEMSSTAKEN event generated.	

Sub-Dispensing Is Required - Command Unsuccessful This table illustrates an unsuccessful WFS_CMD_CDM_DISPENSE command where sub-dispensing is required and the end-user does not take the bills during the second "hardware level" dispense, resulting in a timeout condition.

Step	End-User	Application	XFS SP	CDM Hardware
1.	User wants to dispense \$130 USD in \$1 USD denominations			
2.		WFS_CMD_CDM_DISPENSE command issued.		
3.			Three "hardware level" dispense commands are required. CDM hardware is limited to dispensing 50 bills in any single "hardware level" dispense command.	
4.			WFS_EXEE_CDM_PARTIALDISPE NSE event generated.	
5.			"Hardware level" dispense command issued for \$50 USD.	
6.				Items presented
7.			WFS_SRVE_CDM_SUBDISPENSE OK event generated.	
8.	User takes bills.			
9.			WFS_SRVE_CDM_ITEMSTAKEN event generated.	
10.			"Hardware level" dispense command issued for \$50 USD.	
11.				Items presented.
12.			WFS_SRVE_CDM_SUBDISPENSE OK event generated.	
13.	User does not take bills.			
14.			Timeout occurs waiting on end-user to take bills.	
15.		WFS_CMD_CDM_DISPENSE completes with WFS_ERR_CDM_ITEMSNOT TAKEN.		

8. Rules for Cash Unit Exchange

The XFS Start and End Exchange commands should be used by applications to supply the latest information with regards to cash unit replenishment state and content. This guarantees a certain amount of control to an application as to which denominations are stored in which position as well as the general physical state of the logical/physical cash units.

If a cash unit is removed from the CDM outside of the Start/End Exchange operations and subsequently reinserted the status of the physical cash unit should be set to WFS_CDM_STATCUMANIP to indicate to the application that the physical cash unit has been removed, reinserted and possibly tampered with. While the cash unit has this status the Service Provider should not attempt to use it as part of a Dispense operation. The

WFS_CDM_STATCUMANIP status should not change until the next Start/End Exchange operation is performed, even if the cash unit is replaced in its original position.

If all the physical cash units belonging to a logical cash unit are manipulated the parent logical cash unit that the physical cash units belong to should also have its status set to WFS_CDM_STATCUMANIP.

When a cash unit is removed and/or replaced outside of the Start/End Exchange operations the original logical cash unit information such as the values, currency and counts should be preserved in the Cash Unit Info structure reported to the application for accounting purposes until the next Start/End Exchange operations, even if the cash unit physically contains a different denomination.
