**CWA 15748-67**

**WORKSHOP**

July 2008

**AGREEMENT**

---

ICS 35.240.50

English version

**Extensions for Financial Services (XFS) interface specification -  
Release 3.10 - Part 67: Depository Device Class Interface -  
Migration from Version 3.0 (CWA 14050) to Version 3.10 (this  
CWA) - Programmer's Reference**

This CEN Workshop Agreement has been drafted and approved by a Workshop of representatives of interested parties, the constitution of which is indicated in the foreword of this Workshop Agreement.

The formal process followed by the Workshop in the development of this Workshop Agreement has been endorsed by the National Members of CEN but neither the National Members of CEN nor the CEN Management Centre can be held accountable for the technical content of this CEN Workshop Agreement or possible conflicts with standards or legislation.

This CEN Workshop Agreement can in no way be held as being an official standard developed by CEN and its Members.

This CEN Workshop Agreement is publicly available as a reference document from the CEN Members National Standard Bodies.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

## Foreword

---

This CWA is revision 3.10 of the XFS interface specification.

The CEN/ISSS XFS Workshop gathers suppliers as well as banks and other financial service companies. A list of companies participating in this Workshop and in support of this CWA is available from the CEN/ISSS Secretariat.

This CWA was formally approved by the XFS Workshop meeting on 2007-11-29. The specification is continuously reviewed and commented in the CEN/ISSS Workshop on XFS. It is therefore expected that an update of the specification will be published in due time as a CWA, superseding this revision 3.10.

The CWA is published as a multi-part document, consisting of:

Part 1: Application Programming Interface (API) - Service Provider Interface (SPI) - Programmer's Reference

Part 2: Service Classes Definition - Programmer's Reference

Part 3: Printer and Scanning Device Class Interface - Programmer's Reference

Part 4: Identification Card Device Class Interface - Programmer's Reference

Part 5: Cash Dispenser Device Class Interface - Programmer's Reference

Part 6: PIN Keypad Device Class Interface - Programmer's Reference

Part 7: Check Reader/Scanner Device Class Interface - Programmer's Reference

Part 8: Depository Device Class Interface - Programmer's Reference

Part 9: Text Terminal Unit Device Class Interface - Programmer's Reference

Part 10: Sensors and Indicators Unit Device Class Interface - Programmer's Reference

Part 11: Vendor Dependent Mode Device Class Interface - Programmer's Reference

Part 12: Camera Device Class Interface - Programmer's Reference

Part 13: Alarm Device Class Interface - Programmer's Reference

Part 14: Card Embossing Unit Device Class Interface - Programmer's Reference

Part 15: Cash-In Module Device Class Interface - Programmer's Reference

Part 16: Card Dispenser Device Class Interface - Programmer's Reference

Part 17: Barcode Reader Device Class Interface - Programmer's Reference

Part 18: Item Processing Module Device Class Interface - Programmer's Reference

Parts 19 - 28: Reserved for future use.

Parts 29 through 47 constitute an optional addendum to this CWA. They define the integration between the SNMP standard and the set of status and statistical information exported by the Service Providers.

Part 29: XFS MIB Architecture and SNMP Extensions - Programmer's Reference

Part 30: XFS MIB Device Specific Definitions - Printer Device Class

Part 31: XFS MIB Device Specific Definitions - Identification Card Device Class

Part 32: XFS MIB Device Specific Definitions - Cash Dispenser Device Class

Part 33: XFS MIB Device Specific Definitions - PIN Keypad Device Class

Part 34: XFS MIB Device Specific Definitions - Check Reader/Scanner Device Class

Part 35: XFS MIB Device Specific Definitions - Depository Device Class

Part 36: XFS MIB Device Specific Definitions - Text Terminal Unit Device Class

Part 37: XFS MIB Device Specific Definitions - Sensors and Indicators Unit Device Class

Part 38: XFS MIB Device Specific Definitions - Camera Device Class

Part 39: XFS MIB Device Specific Definitions - Alarm Device Class

Part 40: XFS MIB Device Specific Definitions - Card Embossing Unit Class

Part 41: XFS MIB Device Specific Definitions - Cash-In Module Device Class

Part 42: Reserved for future use.

Part 43: XFS MIB Device Specific Definitions - Vendor Dependent Mode Device Class

Part 44: XFS MIB Application Management

Part 45: XFS MIB Device Specific Definitions - Card Dispenser Device Class

Part 46: XFS MIB Device Specific Definitions - Barcode Reader Device Class

Part 47: XFS MIB Device Specific Definitions - Item Processing Module Device Class

Parts 48 - 60 are reserved for future use.

Part 61: Application Programming Interface (API) - Service Provider Interface (SPI) - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 62: Printer Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 63: Identification Card Device Class Interface - Migration from Version 3.02 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 64: Cash Dispenser Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 65: PIN Keypad Device Class Interface - Migration from Version 3.03 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 66: Check Reader/Scanner Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 67: Depository Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 68: Text Terminal Unit Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 69: Sensors and Indicators Unit Device Class Interface - Migration from Version 3.01 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 70: Vendor Dependent Mode Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 71: Camera Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 72: Alarm Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 73: Card Embossing Unit Device Class Interface - Migration from Version 3.0 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

Part 74: Cash-In Module Device Class Interface - Migration from Version 3.02 (CWA 14050) to Version 3.10 (this CWA) - Programmer's Reference

In addition to these Programmer's Reference specifications, the reader of this CWA is also referred to a complementary document, called Release Notes. The Release Notes contain clarifications and explanations on the CWA specifications, which are not requiring functional changes. The current version of the Release Notes is available online from <http://www.cen.eu/iss/Workshop/XFS>.

The information in this document represents the Workshop's current views on the issues discussed as of the date of publication. It is furnished for informational purposes only and is subject to change without notice. CEN/ISSS makes no warranty, express or implied, with respect to this document.

This CEN Workshop Agreement is publicly available as a reference document from the National Members of CEN : AENOR, AFNOR, ASRO, BDS, BSI, CSNI, CYS, DIN, DS, ELOT, EVS, IBN, IPQ, IST, LVS, LST, MSA, MSZT, NEN, NSAI, ON, PKN, SEE, SIS, SIST, SFS, SN, SNV, SUTN and UNI.

Comments or suggestions from the users of the CEN Workshop Agreement are welcome and should be addressed to the CEN Management Centre.

## **1. Migration Information**

---

XFS 3.10 has been designed to minimize backwards compatibility issues. This document highlights the changes made to the Depository device class between version 3.0 and 3.10, by highlighting the additions and deletions to the text.

## 2. Depository Unit

---

This specification describes the functionality of the services provided by the Depository (DEP) services under XFS, by defining the service-specific commands that can be issued, using the **WFSGetInfo**, **WFSAsyncGetInfo**, **WFSExecute** and **WFSAsyncExecute** functions.

A Depository is used for the acceptance and deposit of media into the device or terminal. There are two main types of depository: an envelope depository for the deposit of media in envelopes and a night safe depository for the deposit of bags containing bulk media.

An envelope depository accepts media, prints on the media and deposits the media into a holding container or bin. Some envelope depositories offer the capability to dispense an envelope to the customer at the start of a transaction. The customer takes this envelope, fills in the deposit media, possibly inscribes it and puts it into the deposit slot. The envelope is then accepted, printed and transported into a deposit container.

The envelope dispense mechanism may be part of the envelope depository device mechanism with the same entry/exit slot or it may be a separate mechanism with separate entry/exit slot.

Envelopes dispensed and not taken by the customer can be retracted back into the device. When the dispenser is a separate mechanism the envelope is retracted back into the dispenser container. When the dispenser is a common mechanism the envelope is retracted into the depository container.

A night safe depository normally only logs the deposit of a bag and does not print on the media.

## 4. Info Commands

---

### 4.1 WFS\_INF\_DEP\_STATUS

---

**Description** This command reports the full range of information available, including the information that is provided by the Service Provider.

**Input Param** None.

**Output Param** LPWFSDEPSTATUS lpStatus;

```
typedef struct _wfs_dep_status
{
    WORD          fwDevice;
    WORD          fwDepContainer;
    WORD          fwDepTransport;
    WORD          fwEnvSupply;
    WORD          fwEnvDispenser;
    WORD          fwPrinter;
    WORD          fwToner;
    WORD          fwShutter;
    WORD          wNumOfDeposits;
    LPSTR         lpszExtra;
    DWORD         dwGuidLights[WFS_DEP_GUIDLIGHTS_SIZE];
    WORD          fwDepositLocation;
    WORD          wDevicePosition;
    USHORT       usPowerSaveRecoveryTime;
} WFSDEPSTATUS, *LPWFSDEPSTATUS;
```

*fwDevice*

Specifies the state of the Depository device as one of the following flags:

Value	Meaning
WFS_DEP_DEVONLINE	The device is online (i.e. powered on and operable).
WFS_DEP_DEVOFFLINE	The device is off-line (e.g. the operator has taken the device offline by turning a switch or pulling out the device).
WFS_DEP_DEVPOWEROFF	The device is powered off or physically not connected.
WFS_DEP_DEVNODEVICE	There is no device intended to be there; e.g. this type of self service machine does not contain such a device or it is internally not configured.
WFS_DEP_DEVHWERROR	The device is inoperable due to a hardware error. The device is present but a hardware fault prevents it from being used.
WFS_DEP_DEVUSERERROR	The device is present but a person is preventing proper operation. The application should suspend the device operation or remove the device from service until the Service Provider generates a device state change event indicating the condition of the device has changed, i.e. the error is removed or a permanent error condition has occurred.
WFS_DEP_DEVBUSY	The device is busy and not able to process an Execute command at this time.
<a href="#">WFS_DEP_DEVFRAUDATTEMPT</a>	<a href="#">The device is present but has detected a fraud attempt.</a>

*fwDepContainer*

Specifies the state of the deposit container that contains the deposited envelopes or bags as one of the following flags:

Value	Meaning
WFS_DEP_DEPOK	The deposit container is in a good state.
WFS_DEP_DEPHIGH	The deposit container is almost full (threshold).
WFS_DEP_DEPFULL	The deposit container is full.
WFS_DEP_DEPINOP	The deposit container is inoperable.
WFS_DEP_DEPMISSING	The deposit container is missing.
WFS_DEP_DEPUNKNOWN	Due to a hardware error or other condition, the state of the deposit container cannot be determined.
WFS_DEP_DEPNOTSUPP	The physical device is not able to determine the status of the deposit container.

*fwDepTransport*

Specifies the state of the deposit transport mechanism that transports the envelope into the deposit container. Specified as one of the following flags:

Value	Meaning
WFS_DEP_DEPOK	The deposit transport is in a good state.
WFS_DEP_DEPINOP	The deposit transport is inoperative due to a hardware failure or media jam.
WFS_DEP_DEPUNKNOWN	Due to a hardware error or other condition, the state of the deposit transport cannot be determined.
WFS_DEP_DEPNOTSUPP	The physical device has no deposit transport.

*fwEnvSupply*

Specifies the state of the envelope supply unit as one of the following flags:

Value	Meaning
WFS_DEP_ENVOK	The envelope supply unit is in a good state (and locked).
WFS_DEP_ENVLOW	The envelope supply unit is present but low.
WFS_DEP_ENVEMPTY	The envelope supply unit is present but empty. No envelopes can be dispensed.
WFS_DEP_ENVINOP	The envelope supply unit is in an inoperable state. No envelopes can be dispensed.
WFS_DEP_ENVMISSING	The envelope supply unit is missing.
WFS_DEP_ENVNOTSUPP	The physical device has no envelope supply.
WFS_DEP_ENVUNLOCKED	The envelope supply unit is unlocked.
WFS_DEP_ENVUNKNOWN	Due to a hardware error or other condition, the state of the envelope supply cannot be determined.

*fwEnvDispenser*

Specifies the state of the envelope dispenser. Specified as one of the following flags:

Value	Meaning
WFS_DEP_ENVOK	The envelope dispenser is present and in a good state.
WFS_DEP_ENVINOP	The envelope dispenser is present but in an inoperable state. No envelopes can be dispensed.
WFS_DEP_ENVUNKNOWN	Due to a hardware error or other condition, the state of the envelope dispenser cannot be determined.
WFS_DEP_ENVNOTSUPP	The physical device has no envelope dispenser.

*fwPrinter*

Specifies the state of the printer. Specified as one of the following flags:

Value	Meaning
WFS_DEP_PTROK	The printer is present and in a good state.
WFS_DEP_PTRINOP	The printer is inoperative.

WFS_DEP_PTRUNKNOWN	Due to a hardware error or other condition, the state of the printer cannot be determined.
WFS_DEP_PTRNOTSUPP	The physical device has no printer.

*fwToner*

Specifies the state of the toner (or ink) for the printer. Specified as one of the following flags:

Value	Meaning
WFS_DEP_TONERFULL	The toner cassette is full.
WFS_DEP_TONERLOW	The toner in the printer is low.
WFS_DEP_TONEROUT	The toner in the printer is empty.
WFS_DEP_TONERUNKNOWN	Due to a hardware error or other condition, the state of the toner for the printer cannot be determined.
WFS_DEP_TONERNOTSUPP	The physical device has no toner.

*fwShutter*

Specifies the state of the shutter or door. Specified as one of the following flags:

Value	Meaning
WFS_DEP_SHTCLOSED	The shutter is closed.
WFS_DEP_SHTOPEN	The shutter is open.
WFS_DEP_SHTJAMMED	The shutter is jammed.
WFS_DEP_SHTUNKNOWN	Due to a hardware error or other condition, the state of the shutter cannot be determined.
WFS_DEP_SHTNOTSUPP	The physical device has no shutter.

*wNumOfDeposits*

Specifies the number of envelopes or bags in the deposit container. This value is persistent, i.e. maintained through power failures, opens, closes and system resets.

*lpszExtra*

Pointer to a list of vendor-specific, or any other extended, information. The information is returned as a series of "key=value" strings so that it is easily extensible by Service Providers. Each string is null-terminated, with the final string terminating with two null characters. [An empty list may be indicated by either a NULL pointer or a pointer to two consecutive null characters.](#)

[dwGuidLights \[...\]](#)

[Specifies the state of the guidance light indicators. A number of guidance light types are defined below. Vendor specific guidance lights are defined starting from the end of the array. The maximum guidance light index is WFS\\_DEP\\_GUIDLIGHTS\\_MAX.](#)

[Specifies the state of the guidance light indicator as](#)

[WFS\\_DEP\\_GUIDANCE\\_NOT\\_AVAILABLE, WFS\\_DEP\\_GUIDANCE\\_OFF or a combination of the following flags consisting of one type B, and optionally one type C.](#)

Value	Meaning	Type
<a href="#">WFS_DEP_GUIDANCE_NOT_AVAILABLE</a>	<a href="#">The status is not available.</a>	<a href="#">A</a>
<a href="#">WFS_DEP_GUIDANCE_OFF</a>	<a href="#">The light is turned off.</a>	<a href="#">A</a>
<a href="#">WFS_DEP_GUIDANCE_SLOW_FLASH</a>	<a href="#">The light is blinking slowly.</a>	<a href="#">B</a>
<a href="#">WFS_DEP_GUIDANCE_MEDIUM_FLASH</a>	<a href="#">The light is blinking medium frequency.</a>	<a href="#">B</a>
<a href="#">WFS_DEP_GUIDANCE_QUICK_FLASH</a>	<a href="#">The light is blinking quickly.</a>	<a href="#">B</a>
<a href="#">WFS_DEP_GUIDANCE_CONTINUOUS</a>	<a href="#">The light is turned on continuous (steady).</a>	<a href="#">B</a>
<a href="#">WFS_DEP_GUIDANCE_RED</a>	<a href="#">The light is red.</a>	<a href="#">C</a>
<a href="#">WFS_DEP_GUIDANCE_GREEN</a>	<a href="#">The light is green.</a>	<a href="#">C</a>
<a href="#">WFS_DEP_GUIDANCE_YELLOW</a>	<a href="#">The light is yellow.</a>	<a href="#">C</a>
<a href="#">WFS_DEP_GUIDANCE_BLUE</a>	<a href="#">The light is blue.</a>	<a href="#">C</a>
<a href="#">WFS_DEP_GUIDANCE_CYAN</a>	<a href="#">The light is cyan.</a>	<a href="#">C</a>
<a href="#">WFS_DEP_GUIDANCE_MAGENTA</a>	<a href="#">The light is magenta.</a>	<a href="#">C</a>
<a href="#">WFS_DEP_GUIDANCE_WHITE</a>	<a href="#">The light is white.</a>	<a href="#">C</a>

[dwGuidLights \[WFS\\_DEP\\_GUIDANCE\\_ENVDEPOSITORY\]](#)

[Specifies the state of the guidance light indicator on the envelope depository unit.](#)

*dwGuidLights [WFS\_DEP\_GUIDANCE\_ENVDISPENSER]*

Specifies the state of the guidance light indicator on the envelope dispenser unit.

*fwDepositLocation*

Specifies the location of the item deposited at the end of the last WFS\_CMD\_DEP\_ENTRY command. Specified as one of the following flags:

<u>Value</u>	<u>Meaning</u>
<u>WFS_DEP_DEPLOCNOTSUPP</u>	<u>Reporting the location of the last deposit is not supported.</u>
<u>WFS_DEP_DEPLOCUNKNOWN</u>	<u>Cannot determine the location of the last deposited item.</u>
<u>WFS_DEP_DEPLOCCONTAINER</u>	<u>The item is in the container.</u>
<u>WFS_DEP_DEPLOCTRANSPORT</u>	<u>The item is in the transport.</u>
<u>WFS_DEP_DEPLOCPRINTER</u>	<u>The item is in the printer.</u>
<u>WFS_DEP_DEPLOCSHUTTER</u>	<u>The item is at the shutter (available for removal).</u>
<u>WFS_DEP_DEPLOCNONE</u>	<u>No item was entered on the last WFS_CMD_DEP_ENTRY.</u>
<u>WFS_DEP_DEPLOCREMOVED</u>	<u>The item was removed.</u>

For devices capable of identifying item location, WFS\_DEP\_DEPLOCNONE is returned when the status is queried before any call to WFS\_CMD\_DEP\_ENTRY.

*wDevicePosition*

Specifies the device position. The device position value is independent of the *fwDevice* value, e.g. when the device position is reported as WFS\_DEP\_DEVICEINPOSITION, *fwDevice* can have any of the values defined above (including WFS\_DEP\_DEVONLINE or WFS\_DEP\_DEVOFFLINE). If the device is not in its normal operating position (i.e. WFS\_DEP\_DEVICEINPOSITION) then media may not be presented through the normal customer interface. This value is one of the following values:

<u>Value</u>	<u>Meaning</u>
<u>WFS_DEP_DEVICEINPOSITION</u>	<u>The device is in its normal operating position, or is fixed in place and cannot be moved.</u>
<u>WFS_DEP_DEVICEINPOSITION</u>	<u>The device has been removed from its normal operating position.</u>
<u>WFS_DEP_DEVICEPOSUNKNOWN</u>	<u>Due to a hardware error or other condition, the position of the device cannot be determined.</u>
<u>WFS_DEP_DEVICEPOSNOTSUPP</u>	<u>The physical device does not have the capability of detecting the position.</u>

*usPowerSaveRecoveryTime*

Specifies the actual number of seconds required by the device to resume its normal operational state from the current power saving mode. This value is zero if either the power saving mode has not been activated or no power save control is supported.

**Error Codes** Only the generic error codes defined in [Ref. 1] can be generated by this command.

**Comments** Applications which require or expect specific information to be present in the *lpszExtra* parameter may not be device or vendor-independent.

In the case where communications with the device has been lost, the *fwDevice* field will report WFS\_DEP\_DEVPOWEROFF when the device has been removed or WFS\_DEP\_DEVHWERROR if the communications are unexpectedly lost. All other fields should contain a value based on the following rules and priority:

1. Report the value as unknown.
2. Report the value as a general h/w error.
3. Report the value as the last known value.

## 4.2 WFS\_INF\_DEP\_CAPABILITIES

**Description** This command is used to retrieve the capabilities of the Depository.

**Input Param** None.

**Output Param** LPWFSDEPCAPS lpCaps;

```
typedef struct _wfs_dep_caps
{
    WORD        wClass;
    WORD        fwType;
    WORD        fwEnvSupply;
    BOOL        bDepTransport;
    BOOL        bPrinter;
    BOOL        bToner;
    BOOL        bShutter;
    BOOL        bPrintOnRetracts;
    WORD        fwRetractEnvelope;
    WORD        wMaxNumChars;
    WORD        fwCharSupport;
    LPSTR       lpszExtra;
    WORD        fwCharSupport;
    DWORD       dwGuidLights[WFS_DEP_GUIDLIGHTS_SIZE];
    BOOL       bPowerSaveControl
} WFSDEPCAPS, *LPWFSDEPCAPS;
```

*wClass*

Specifies the logical service class as WFS\_SERVICE\_CLASS\_DEP.

*fwType*

Specifies the type of the depository device as a combination of the following flags:

Value	Meaning
WFS_DEP_TYPEENVELOPE	Depository accepts envelopes.
WFS_DEP_TYPEBAGDROP	Depository accepts bags.

*fwEnvSupply*

Defines what type of Envelope Supply Unit exists as one of the following flags:

Value	Meaning
WFS_DEP_ENVMOTORIZED	Envelope Supply can dispense envelopes.
WFS_DEP_ENVMANUAL	Envelope Supply is manual and must be unlocked to allow envelopes to be taken. The Service Event, WFS_SRVE_DEP_ENVTAKEN, can not be sent and the Execute Command, WFS_CMD_DEP_RETRACT can not be supported.
WFS_DEP_ENVNONE	No Envelope Supply or Envelope Supply is manual and envelopes can be taken at any time. The Service Event, WFS_SRVE_DEP_ENVTAKEN, can not be sent and the Execute Command, WFS_CMD_DEP_RETRACT can not be supported.

*bDepTransport*

Specifies whether a deposit transport mechanism is available.

*bPrinter*

Specifies whether a printer is available.

*bToner*

Specifies whether the printer has a toner (or ink) cassette.

*bShutter*

Specifies whether a deposit transport shutter is available.

*bPrintOnRetracts*

Specifies whether the device can print the string specified in the *lpszPrintData* or *lpszUNICODEPrintData* field of the WFS\_CMD\_DEP\_RETRACT command on retracted envelopes.

*fwRetractEnvelope*

Specifies the ability of the envelope dispenser to retract envelopes as one of the following flags:

Value	Meaning
WFS_DEP_NORETRACT	The envelope dispenser does not have the capability to retract envelopes.
WFS_DEP_RETRACTDEP	Retracted envelopes are put in the deposit container.
WFS_DEP_RETRACTDISP	Retracted envelopes are retracted back to the envelope dispenser.

*wMaxNumChars*

Specifies the maximum number of characters that can be printed on the envelope.

*fwCharSupport*

One or more flags specifying the Character Sets supported by the Service Provider:

Value	Meaning
WFS_DEP_ASCII	ASCII is supported for execute command data values.
WFS_DEP_UNICODE	UNICODE is supported for execute command data values.

*lpszExtra*

Pointer to a list of vendor-specific, or any other extended, information. The information is returned as a series of "key=value" strings so that it is easily extensible by Service Providers. Each string is null-terminated, with the final string terminating with two null characters. [An empty list may be indicated by either a NULL pointer or a pointer to two consecutive null characters.](#)

[dwGuidLights \[...\]](#)

[Specifies which guidance lights are available. A number of guidance light types are defined below. Vendor specific guidance lights are defined starting from the end of the array. The maximum guidance light index is WFS\\_DEP\\_GUIDLIGHTS\\_MAX.](#)

[The elements of this array are specified as a combination of the following flags and indicate all of the possible flash rates \(type B\) and colors \(type C\) that the guidance light indicator is capable of handling. If the guidance light indicator only supports one color then no value of type C is returned. A value of WFS\\_DEP\\_GUIDANCE\\_NOT\\_AVAILABLE indicates that the device has no guidance light indicator or the device controls the light directly with no application control possible.](#)

Value	Meaning	Type
WFS_DEP_GUIDANCE_NOT_AVAILABLE	There is no guidance light control available at this position.	A
WFS_DEP_GUIDANCE_OFF	The light is turned off.	A
WFS_DEP_GUIDANCE_SLOW_FLASH	The light is blinking slowly.	B
WFS_DEP_GUIDANCE_MEDIUM_FLASH	The light is blinking medium frequency.	B
WFS_DEP_GUIDANCE_QUICK_FLASH	The light is blinking quickly.	B
WFS_DEP_GUIDANCE_CONTINUOUS	The light is turned on continuous (steady).	B
WFS_DEP_GUIDANCE_RED	The light is red.	C
WFS_DEP_GUIDANCE_GREEN	The light is green.	C
WFS_DEP_GUIDANCE_YELLOW	The light is yellow.	C
WFS_DEP_GUIDANCE_BLUE	The light is blue.	C
WFS_DEP_GUIDANCE_CYAN	The light is cyan.	C
WFS_DEP_GUIDANCE_MAGENTA	The light is magenta.	C
WFS_DEP_GUIDANCE_WHITE	The light is white.	C

[dwGuidLights \[WFS DEP GUIDANCE ENVDEPOSITORY\]](#)

Specifies whether the guidance light indicator on the envelope depository unit is available.

[dwGuidLights \[WFS DEP GUIDANCE ENVDISPENSER\]](#)

Specifies whether the guidance light indicator on the envelope dispenser unit is available.

[bPowerSaveControl](#)

Specifies whether power saving control is available. This can either be TRUE if available or FALSE if not available.

**Error Codes** Only the generic error codes defined in [Ref. 1] can be generated by this command.

**Comments** Applications which require or expect specific information to be present in the *lpszExtra* parameter may not be device or vendor-independent.

## 5. Execute Commands

### 5.1 WFS\_CMD\_DEP\_ENTRY

**Description** This command starts the entry of an envelope and deposits it into the deposit container. If the envelope entered has an incorrect size and the deposit was not completed, the envelope is returned to the exit slot for removal by the customer, if the deposit device is capable of this operation (either hardware capability or hardware problems such as a jam may prohibit the envelope from being returned). A WFS\_SRVE\_DEP\_ENVTAKEN is sent when the envelope is removed. [If the envelope entered has an incorrect size but the deposit was completed, WFS\\_SUCCESS is returned and a WFS\\_EXEE\\_DEP\\_DEPOSITERROR event is sent reporting a WFS\\_ERR\\_DEP\\_ENVSIZE value.](#)

If a deposit takes place then this command will report a successful operation and any errors detected during the operation will be returned by the WFS\_EXEE\_DEP\_DEPOSITERROR event. If the successful deposit causes the deposit bin to reach a high or full threshold, a WFS\_USRE\_DEP\_DEPTHRESHOLD event will be sent.

[The WFS\\_EXEE\\_DEP\\_INPUTDEPOSIT event will be generated when the device is ready to accept the deposit.](#)

**Input Param** LPWFSDEPENVELOPE lpEnvelope;

```
typedef struct _wfs_dep_envelope
{
    LPSTR          lpszPrintData;
    LPWSTR         lpszUNICODEPrintData;
} WFSDEPENVELOPE, *LPWFSDEPENVELOPE;
```

*lpszPrintData*

Specifies the data that will be printed on the envelope that is entered by the customer.

*lpszUNICODEPrintData*

Specifies the UNICODE data that will be printed on the envelope that is entered by the customer. The *lpszUNICODEPrintData* field should only be used if the Service Provider supports UNICODE. The *lpszPrintData* and *lpszUNICODEPrintData* fields are mutually exclusive.

**Output Param** None.

**Error Codes** In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_DEP_DEPFULL	The deposit container is full.
WFS_ERR_DEP_DEPJAMMED	An envelope jam occurred in the deposit transport between the entry slot and the deposit container.
WFS_ERR_DEP_ENVSIZE	The envelope entered has an incorrect size.
WFS_ERR_DEP_PTRFAIL	The printer failed.
WFS_ERR_DEP_SHTNOTCLOSED	The shutter failed to close.
WFS_ERR_DEP_SHTNOTOPENED	The shutter failed to open.
WFS_ERR_DEP_CONTMISSING	The deposit container is not present.
WFS_ERR_DEP_DEPUNKNOWN	The result of the deposit is not known.
WFS_ERR_DEP_CHARSETNOTSUPP	Character set(s) supported by Service Provider is inconsistent with use of <i>lpszPrintData</i> or <i>lpszUNICODEPrintData</i> fields.
WFS_ERR_DEP_TONEROUT	Toner or ink supply is empty or printing contrast with ribbon is not sufficient. This error can only occur when a print string was passed in the input parameter.

**Events** In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value	Meaning
WFS_SRVE_DEP_ENVTAKEN	The envelope has been taken by the user.
WFS_EXEE_DEP_ENVDEPOSITED	The envelope has been deposited in the deposit container.
WFS_EXEE_DEP_DEPOSITERROR	An error occurred during the deposit operation.
WFS_USRE_DEP_DEPTHRESHOLD	This user event is used to specify that the state of the deposit container reached a threshold.
WFS_USRE_DEP_TONERTHRESHOLD	This user event is used to specify that the state of the toner supply reached a threshold.
WFS_SRVE_DEP_ENVINSERTED	An envelope has been inserted by the user.
<a href="#">WFS_EXEE_DEP_INSERTDEPOSIT</a>	<a href="#">Device is ready to accept deposit from the user.</a>

**Comments** If the data specified in *lpszPrintData* or *lpszUNICODEPrintData* is longer than the maximum allowed characters, the error code WFS\_ERR\_INVALID\_DATA will be returned.

## 5.2 WFS\_CMD\_DEP\_DISPENSE

---

**Description** This command is used to dispense an envelope from the envelope supply. This command will either action the dispensing of an envelope from the envelope supply or will unlock the envelope supply for manual access.

**Input Param** None.

**Output Param** None.

**Error Codes** In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_DEP_ENVEMPTY	There is no envelope in the envelope unit.
WFS_ERR_DEP_ENVJAMMED	An envelope jam occurred in the dispenser transport between the envelope supply and the output slot.
WFS_ERR_DEP_SHTNOTOPENED	The shutter failed to open.

**Events** In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value	Meaning
WFS_SRVE_DEP_ENVTAKEN	The envelope has been taken by the user.
WFS_USRE_DEP_ENVTHRESHOLD	This user event is used to specify that the state of the envelope supply reached a threshold.

**Comments** None.

### 5.3 WFS\_CMD\_DEP\_RETRACT

**Description** This command is used to retract an envelope that was not taken by a customer after an envelope dispense operation. The given string is printed on the envelope and the envelope is retracted into the deposit container or back to the envelope dispenser, depending on the capabilities of the physical device. If a retract to the deposit bin causes the deposit bin to reach a high or full threshold, a WFS\_USRE\_DEP\_DEPTHTHRESHOLD event will be sent.

This command will only return with an error code if the retract has not taken place. The error code will then describe the reason for the failure.

**Input Param** LPWFSDEPENVELOPE lpEnvelope;

```
typedef struct _wfs_dep_envelope
{
    LPSTR          lpzPrintData;
    LPSTR          lpzUNICODEPrintData;
} WFSDEPENVELOPE, *LPWFSDEPENVELOPE;
```

*lpzPrintData*

Specifies the data that will be printed on the envelope that is retracted.

*lpzUNICODEPrintData*

Specifies the UNICODE data that will be printed on the envelope that is retracted.

The *lpzUNICODEPrintData* field should only be used if the Service Provider supports UNICODE. The *lpzPrintData* and *lpzUNICODEPrintData* fields are mutually exclusive.

**Output Param** None.

**Error Codes** In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_DEP_DEPFULL	The deposit container is full.
WFS_ERR_DEP_DEPJAMMED	An envelope jam occurred in the deposit transport between the entry slot and the deposit container (may only occur with hardware that retracts to the deposit container).
WFS_ERR_DEP_ENVJAMMED	An envelope jam occurred between the entry slot and the envelope container (may only occur with hardware that retracts to the envelope container).
WFS_ERR_DEP_NOENV	No envelope to retract.
WFS_ERR_DEP_PTRFAIL	The printer failed.
WFS_ERR_DEP_SHTNOTCLOSED	The shutter failed to close.
WFS_ERR_DEP_CONTMISSING	The deposit container is not present.
WFS_ERR_DEP_CHARSETNOTSUPP	Character set(s) supported by Service Provider is inconsistent with use of <i>lpzPrintData</i> or <i>lpzUNICODEPrintData</i> fields.
WFS_ERR_DEP_TONEROUT	Toner or ink supply is empty or printing contrast with ribbon is not sufficient.

**Events** In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value	Meaning
WFS_USRE_DEP_DEPTHTHRESHOLD	This user event is used to specify that the state of the deposit container reached a threshold.
WFS_USRE_DEP_TONERTHRESHOLD	This user event is used to specify that the state of the toner supply reached a threshold.

**Comments** If the data specified in *lpzPrintData* or *lpzUNICODEPrintData* is longer than the maximum allowed characters, the error code WFS\_ERR\_INVALID\_DATA will be returned.

## 5.4 WFS\_CMD\_DEP\_RESET\_COUNT

---

**Description** This command is used to reset the present value for number of envelopes/bags in the deposit container to zero.

**Input Param** None.

**Output Param** None.

**Error Codes** Only the generic error codes defined in [Ref. 1] can be generated by this command.

**Events** In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value	Meaning
WFS_USRE_DEP_DEPTHRESHOLD	This user event is used to specify that the state of the deposit container reached a threshold.

**Comments** None.

## 5.5 WFS\_CMD\_DEP\_RESET

---

**Description** Sends a service reset to the Service Provider. The Service Provider may reset the deposit device and also the envelope dispenser, if possible. Any media found in the device can be either captured or completely ejected (depending on hardware). If a capture into the deposit bin causes the deposit bin to reach a high or full threshold, a WFS\_USRE\_DEP\_DEPTHRESHOLD event will be sent. If the WFS\_CMD\_DEP\_RESET command is requested to eject the media and the hardware is not capable of this operation either due to hardware capability or hardware error such as a jam, the Service Provider will retract the media in order to attempt to make the device operational. The WFS\_SRVE\_DEP\_MEDIADETECTED event will indicate the position of the detected media following completion of the command. If the input parameter to the WFS\_CMD\_DEP\_RESET command is NULL, the Service Provider will go through default actions to clear the deposit transport. The WFS\_SRVE\_DEP\_MEDIADETECTED event will indicate the position of any detected media following completion of the command. The envelope dispenser will go through the most effective means to clear any jammed media.

**Input Param** LPDWORD *lpdwDepMediaControl*;

Specifies the action that should be done if deposited media is detected during the reset operation, as one of the following values:

Value	Meaning
WFS_DEP_CTRLRETRACT	Any media detected in the device should be completely ejected (depending on the hardware).
WFS_DEP_CTRLRETRACT	Any media detected in the device should be deposited into the deposit container during the reset operation.

If *lpdwDepMediaControl* is set to NULL, the Service Provider will go through default actions to clear the deposit transport.

**Output Param** None.

**Error Codes** In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_DEP_DEPFULL	The deposit container is full.
WFS_ERR_DEP_DEPJAMMED	An envelope jam occurred in the deposit transport.
WFS_ERR_DEP_ENVJAMMED	An envelope jam occurred in the dispenser transport between the envelope supply and the output slot.
WFS_ERR_DEP_SHTNOTOPENED	The shutter failed to open.
WFS_ERR_DEP_SHTNOTCLOSED	The shutter failed to close.
WFS_ERR_DEP_CONTMISSING	The deposit container is not present.

**Events** In addition to the generic events defined in [Ref. 1], the following events may be generated by this command, if the appropriate situation occurs and the device service has the capability to detect the situation:

Value	Meaning
WFS_SRVE_DEP_ENVTAKEN	The envelope has been taken by the user.
WFS_USRE_DEP_DEPTHRESHOLD	This user event is used to specify that the state of the deposit container reached a threshold.
WFS_SRVE_DEP_MEDIADETECTED	Media is detected in the device during a reset operation.

**Comments** This command is used by an application control program to cause a device to reset itself to a known good condition. Persistent values may change, but will not be reset as a result of this command (i.e. if an envelope is captured, the *wNumOfDeposit* value in the WFSDEPSTATUS structure will be incremented, but never reset to zero).

## 5.6 WFS\_CMD\_DEP\_SET\_GUIDANCE\_LIGHT

**Description** This command is used to set the status of the DEP guidance lights. This includes defining the flash rate and the color. When an application tries to use a color that is not supported then the Service Provider will return the generic error WFS\_ERR\_UNSUPP\_DATA.

**Input Param** LPWFSDEPSETGUIDLIGHT lpSetGuidLight:

```
typedef struct _wfs_dep_set_guidlight
{
    WORD wGuidLight;
    DWORD dwCommand;
} WFSDEPSETGUIDLIGHT, *LPWFSDEPSETGUIDLIGHT;
```

*wGuidLight*

Specifies the index of the guidance light to set as one of the values defined within the capabilities section.

*dwCommand*

Specifies the state of the guidance light indicator as WFS\_DEP\_GUIDANCE\_OFF or a combination of the following flags consisting of one type B, and optionally one type C. If no value of type C is specified then the default color is used. The Service Provider determines which color is used as the default color.

Value	Meaning	Type
WFS_DEP_GUIDANCE_OFF	The light indicator is turned off.	A
WFS_DEP_GUIDANCE_SLOW_FLASH	The light indicator is set to flash slowly.	B
WFS_DEP_GUIDANCE_MEDIUM_FLASH	The light indicator is set to flash medium frequency.	B
WFS_DEP_GUIDANCE_QUICK_FLASH	The light indicator is set to flash quickly.	B
WFS_DEP_GUIDANCE_CONTINUOUS	The light indicator is turned on continuously (steady).	B
WFS_DEP_GUIDANCE_RED	The light indicator color is set to red.	C
WFS_DEP_GUIDANCE_GREEN	The light indicator color is set to green.	C
WFS_DEP_GUIDANCE_YELLOW	The light indicator color is set to yellow.	C
WFS_DEP_GUIDANCE_BLUE	The light indicator color is set to blue.	C
WFS_DEP_GUIDANCE_CYAN	The light indicator color is set to cyan.	C
WFS_DEP_GUIDANCE_MAGENTA	The light indicator color is set to magenta.	C
WFS_DEP_GUIDANCE_WHITE	The light indicator color is set to white.	C

**Output Param** None.

**Error Codes** In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_DEP_INVALID_PORT	An attempt to set a guidance light to a new value was invalid because the guidance light does not exist.

**Events** Only the generic events defined in [Ref. 1] can be generated by this command.

**Comments** Guidance light support was added into the DEP primarily to support guidance lights for workstations where more than one instance of a DEP is present. The original SIU guidance light mechanism was not able to manage guidance lights for workstations with multiple DEPs. This command can also be used to set the status of the DEP guidance lights when only one instance of a DEP is present.

## 5.7 WFS\_CMD\_DEP\_SUPPLY\_REPLENISH

---

**Description** After the supplies have been replenished, this command is used to indicate that the specified supplies have been replenished and are expected to be in a healthy state.

Hardware that cannot detect the level of a supply and reports on the supply's status using metrics (or some other means), must assume the supply has been fully replenished after this command is issued. The appropriate threshold event must be broadcast.

Hardware that can detect the level of a supply must update its status based on its sensors, generate a threshold event if appropriate and succeed the command even if the supply has not been replenished. If it has already detected the level and reported the threshold before this command was issued, the command must succeed and no threshold event is required.

**Input Param** LPWFSDEPSUPPLYREPLEN lpSupplyReplen;

```
typedef struct wfs_dep_supply_replen
{
    WORD          fwSupplyReplen;
} WFSDEPSUPPLYREPLEN, *LPWFSDEPSUPPLYREPLEN;
```

*fwSupplyReplen*

Specifies the supply that was replenished as a combination of the following values:

<u>Value</u>	<u>Meaning</u>
<u>WFS_DEP_REPLEN_ENV</u>	<u>The envelope supply was replenished.</u>
<u>WFS_DEP_REPLEN_TONER</u>	<u>The toner supply was replenished.</u>

**Output Param** None.

**Error Codes** Only the generic error codes defined in [Ref. 1] can be generated by this command.

**Events** In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

<u>Value</u>	<u>Meaning</u>
<u>WFS_USRE_DEP_ENVTHRESHOLD</u>	<u>This user event is used to specify that the state of the envelope supply threshold has been cleared.</u>
<u>WFS_USRE_DEP_TONERTHRESHOLD</u>	<u>This user event is used to specify that the state of the toner (or ink supply or the state of a ribbon) supply threshold has been cleared.</u>

**Comments** If any one of the specified supplies is not supported by a Service Provider, WFS\_ERR\_UNSUPP\_DATA should be returned, and no replenishment actions will be taken by the Service Provider.

## 5.8 WFS\_CMD\_DEP\_POWER\_SAVE\_CONTROL

**Description** This command activates or deactivates the power-saving mode.

If the Service Provider receives another execute command while in power saving mode, the Service Provider automatically exits the power saving mode, and executes the requested command. If the Service Provider receives an information command while in power saving mode, the Service Provider will not exit the power saving mode.

**Input Param** LPWFSDEPPOWERSAVECONTROL lpPowerSaveControl;

```
typedef struct _wfs_dep_power_save_control
{
    USHORT usMaxPowerSaveRecoveryTime;
} WFSDEPPOWERSAVECONTROL, *LPWFSDEPPOWERSAVECONTROL;
```

*usMaxPowerSaveRecoveryTime*

Specifies the maximum number of seconds in which the device must be able to return to its normal operating state when exiting power save mode. The device will be set to the highest possible power save mode within this constraint. If *usMaxPowerSaveRecoveryTime* is set to zero then the device will exit the power saving mode.

**Output Param** None.

**Error Codes** In addition to the generic error codes defined in [Ref. 1], the following error codes can be generated by this command:

Value	Meaning
WFS_ERR_DEP_POWERSAVETOOSHORT	The power saving mode has not been activated because the device is not able to resume from the power saving mode within the specified <i>usMaxPowerSaveRecoveryTime</i> value.
WFS_ERR_DEP_POWERSAVEMEDIAPRESENT	The power saving mode has not been activated because media is present inside the device.

**Events** In addition to the generic events defined in [Ref. 1], the following events can be generated by this command:

Value	Meaning
WFS_SRVE_DEP_POWER_SAVE_CHANGE	The power save recovery time has changed.

**Comments** None.

## 6. Events

---

### 6.1 WFS\_SRVE\_DEP\_ENVTAKEN

---

**Description** This service event is used to specify that the envelope has been taken by the customer.

**Event Param** None.

**Comments** None.

## **6.2 WFS\_EXEE\_DEP\_ENVDEPOSITED**

---

<b>Description</b>	This execute event is used to specify that the envelope has been deposited in the deposit container.
<b>Event Param</b>	None.
<b>Comments</b>	None.

### **6.3 WFS\_EXEE\_DEP\_DEPOSITERROR**

---

<b>Description</b>	This execute event is used to specify that an error occurred during the deposit operation. For every error that occurred a single execute event is generated.
<b>Event Param</b>	LPLONG lpError; <i>lpError</i> For a list of possible error conditions see the description of the WFS_CMD_DEP_ENTRY command.
<b>Comments</b>	None.

## 6.4 WFS\_USRE\_DEP\_DEPTHRESHOLD

---

**Description** This user event is used to specify that the state of the deposit container reached a threshold.

**Event Param** LPWORD lpwDepositThreshold;

*lpwDepositThreshold*

Specified as one of the following flags:

Value	Meaning
WFS_DEP_DEPOK	The deposit container is in a good state.
WFS_DEP_DEPHIGH	The deposit container is almost full (threshold).
WFS_DEP_DEPFULL	The deposit container is full.

**Comments** None.

## 6.5 WFS\_USRE\_DEP\_TONERTHRESHOLD

---

**Description** This user event is used to specify that the state of the toner (or ink supply or the state of a ribbon) reached a threshold.

**Event Param** LPWORD lpwTonerThreshold;

*lpwTonerThreshold*

Specified as one of the following flags:

<u>Value</u>	<u>Meaning</u>
WFS_DEP_TONERFULL	The toner or ink supply is full or the ribbon is OK.
WFS_DEP_TONERLOW	The toner or ink supply is low or the print contrast with a ribbon is weak.
WFS_DEP_TONEROUT	The toner or ink supply is empty or the print contrast with a ribbon is not sufficient any more.

**Comments** None.

## 6.6 WFS\_USRE\_DEP\_ENVTHRESHOLD

---

**Description** This user event is used to specify that the state of the envelope supply reached a threshold.

**Event Param** LPWORD lpwEnvelopeThreshold;

*lpwEnvelopeThreshold*

Specified as one of the following flags:

Value	Meaning
WFS_DEP_ENVOK	The envelope supply is present and in a good state.
WFS_DEP_ENVLOW	The envelope supply is present but low.
WFS_DEP_ENVEMPTY	The envelope supply is present but empty. No envelopes can be dispensed.

**Comments** None.

## **6.7 WFS\_SRVE\_DEP\_CONTINSERTED**

---

**Description** This service event is used to specify that the deposit container has been reinserted into the device.  
**Event Param** None.  
**Comments** None.

## **6.8 WFS\_SRVE\_DEP\_CONTREMOVED**

---

**Description** This service event is used to specify that the deposit container has been removed from the device.  
**Event Param** None.  
**Comments** None.

## **6.9 WFS\_SRVE\_DEP\_ENVINSERTED**

---

**Description** This service event is used to specify that an envelope has been inserted by the customer.  
**Event Param** None.  
**Comments** None.

## 6.10 WFS\_SRVE\_DEP\_MEDIADETECTED

**Description** This event is generated when media is detected in the device during a reset operation. The media may be detected as a result of the reset operation on the envelope dispenser, the envelope depositor, or both.

**Event Param** LPWFSDEPMEDIADETECTED lpMediaDetected;

```
typedef struct _wfs_dep_media_detected
{
    WORD          wDispenseMedia;
    WORD          wDepositMedia;
} WFSDEPMEDIADETECTED, *LPWFSDEPMEDIADETECTED;
```

*wDispenseMedia*

Specifies the dispensed envelope position after the reset operation, as one of the following values:

Value	Meaning
WFS_DEP_NOMEDIA	No dispensed media was detected during the reset operation.
WFS_DEP_MEDIARETRACTED	The media was retracted into the deposit container during the reset operation.
WFS_DEP_MEDIADISPENSER	The media was retracted into the envelope dispenser during the reset operation.
WFS_DEP_MEDIAEJECTED	The media is in the exit slot.
WFS_DEP_MEDIAJAMMED	The media is jammed in the device.
WFS_DEP_MEDIAUNKNOWN	The media is in an unknown position.

*wDepositMedia*

Specifies the deposited media position after the reset operation, as one of the following values:

Value	Meaning
WFS_DEP_NOMEDIA	No deposited media was detected during the reset operation.
WFS_DEP_MEDIARETRACTED	The media was retracted into the deposit container during the reset operation.
WFS_DEP_MEDIAEJECTED	The media is in the exit slot.
WFS_DEP_MEDIAJAMMED	The media is jammed in the device.
WFS_DEP_MEDIAUNKNOWN	The media is in an unknown position.

**Comments** None.

## **6.11 WFS EXEE DEP INSERTDEPOSIT**

---

**Description** This event notifies the application when the device is ready for the user to make the deposit. This event is mandatory.

**Event Param** None.

**Comments** None.

## 6.12 WFS SRVE DEP DEVICEPOSITION

---

**Description** This service event reports that the device has changed its position status.

**Event Param** LPWFSDEPDEVICEPOSITION lpDevicePosition:

```
typedef struct wfs_dep_device_position  
{  
    WORD wPosition;  
} WFSDEPDEVICEPOSITION, *LPWFSDEPDEVICEPOSITION;
```

*wPosition*

Position of the device as one of the following values:

<u>Value</u>	<u>Meaning</u>
<u>WFS_DEP_DEVICEINPOSITION</u>	<u>The device is in its normal operating position.</u>
<u>WFS_DEP_DEVICENOTINPOSITION</u>	<u>The device has been removed from its normal operating position.</u>
<u>WFS_DEP_DEVICEPOSUNKNOWN</u>	<u>The position of the device cannot be determined.</u>

**Comments** None.

## **6.13 WFS SRVE DEP POWER SAVE CHANGE**

---

**Description** This service event specifies that the power save recovery time has changed.

**Event Param** LPWFSDEPPOWERSAVECHANGE lpPowerSaveChange:

```
typedef struct wfs_dep_power_save_change  
{  
    USHORT          usPowerSaveRecoveryTime;  
} WFSDEPPOWERSAVECHANGE, *LPWFSDEPPOWERSAVECHANGE;
```

*usPowerSaveRecoveryTime*

Specifies the actual number of seconds required by the device to resume its normal operational state. This value is zero if the device exited the power saving mode.

**Comments** None.

## 7. C-Header file
