# English version

# Emergency management - Incident situational reporting for critical infrastructures

This CEN Workshop Agreement has been drafted and approved by a Workshop of representatives of interested parties, the constitution of which is indicated in the foreword of this Workshop Agreement.

The formal process followed by the Workshop in the development of this Workshop Agreement has been endorsed by the National Members of CEN but neither the National Members of CEN nor the CEN-CENELEC Management Centre can be held accountable for the technical content of this CEN Workshop Agreement or possible conflicts with standards or legislation.

This CEN Workshop Agreement can in no way be held as being an official standard developed by CEN and its Members.

This CEN Workshop Agreement is publicly available as a reference document from the CEN Members National Standard Bodies.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

# **European foreword**

This CEN Workshop Agreement (CWA 18023:2023) has been developed in accordance with the CEN-CENELEC Guide 29 "CEN/CENELEC Workshop Agreements – A rapid prototyping to standardization" and with the relevant provisions of CEN/CENELEC Internal Regulations – Part 2. It was approved by a Workshop of representatives of interested parties on 2023-07-05, the constitution of which was supported by CEN following the public call for participation made on 2022-02-15. However, this CEN Workshop Agreement does not necessarily include all relevant stakeholders.

The final text of this CEN Workshop Agreement was provided to CEN for publication on 2023-07-24.

Results incorporated in this CWA received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 883520.

The following organizations and individuals developed and approved this CEN Workshop Agreement:

- AIT Austrian institute of Technology GmbH (Bernhard Bürger, Dražen Ignjatović), Austria;
- APIROPLUS SOLUTIONS LTD (Argyro Chatzopoulou), Cyprus;
- ATOS (Darío Ruiz-Workshop Chairperson), Spain;
- Corpo Nazionale dei Vigili del Fuoco (Danilo Anastasi, Giovanni Fresu, Paolo Dolci), Italy;
- DESFA (Evangelos Manolis), Greece;
- ETRA Investigación y Desarrollo (Eva María Muñoz, Juan Pablo Escobar); Spain;
- EUCENTRE Foundation (Chiara Casarotti), Italy;
- Fraport Greece (Katerina Vagena), Greece;
- Hellenic Fire Corps National Operations Coordination & Crisis Management Center, Unit 5-112 (Vasileios Kazoukas), Greece;
- Hellenic Fire Service (Nikolaos Iliopoulos), Greece:
- Hellenic Police (Nikolaos Mantzoukis, Theofanis Kyritsis), Greece;
- Hospital Infantil Universitario Niño Jesús (Andrés Castillo), Spain;
- Kentro Meleton Asfaleias (KEMEA) (Georgios Sakkas-WS Vice-chairperson and this CWA proposer, Danai Kazantzidou-Firtinidou, Ioannis Tsaloukidis), Greece:
- OASIS Open-Emergency Management Technical Committee (Rex Brooks), USA;
- -PRECINCT Project, Grant Agreement number: 101021668 H2020-SU-INFRA-2018-2019-2020/H2020-SU-INFRA-2020 (Eftichia Georgiou, Greece; Jenny Rainbird, Ireland; Loredana Mancini, Italy);
- SATWAYS Ltd. (Ilias Gkotsis), Greece;
- SINTEF (Knut Øien, Tor Olav Grøtan), Norway;

- -TNO (Dirk Stolk, Erik Vullings), The Netherlands;
- -Trilateral Research (Christopher Nathan), United Kingdom;
- UNE, Asociación Española de Normalización (Sonia Fernández), Spain;
- Unidade Militar Laboratorial de Defesa Biológica e Química / Centro de Investigação da Academia Militar (UMLDBQ/CINAMIL) (Wilson Antunes), Portugal.

Attention is drawn to the possibility that some elements of this document may be subject to patent rights. CEN-CENELEC policy on patent rights is described in CEN-CENELEC Guide 8 "Guidelines for Implementation of the Common IPR Policy on Patent". CEN shall not be held responsible for identifying any or all such patent rights.

Although the Workshop parties have made every effort to ensure the reliability and accuracy of technical and non-technical descriptions, the Workshop is not able to guarantee, explicitly or implicitly, the correctness of this document. Anyone who applies this CEN Workshop Agreement shall be aware that neither the Workshop, nor CEN, can be held liable for damages or losses of any kind whatsoever. The use of this CEN Workshop Agreement does not relieve users of their responsibility for their own actions, and they apply this document at their own risk. The CEN Workshop Agreement should not be construed as legal advice authoritatively endorsed by CEN/CENELEC.

# Introduction

This CEN Workshop Agreement (CWA) has been elaborated as part of the EU-funded research project STRATEGY (https://strategy-project.eu/), which received funding from the European Union's HORIZON 2020 research and innovation programme under grant agreement (GA) N° 883520. More specifically, upon investigation of the standardisation universe across its thematic streams of research and prioritisation of the identified gaps against the operational perspective of end-users, STRATEGY underlined the need and supported the drafting of this CWA.

All standardisation items supported by STRATEGY project have been fully tested and validated in tabletop exercises (TTXs) and in one full-scale exercise (FSX).

Each EU Member States has unique processes and procedures for crisis management and disaster response. In the case of cross-border crises, these different approaches may cause confusion or conflict among first responders and civil protection bodies. Developing a common language and standardising procedures and interfaces across the EU is thus essential for facilitating cross-border collaboration, thereby helping to protect assets and save lives.

The recently published <u>DIRECTIVE 2022/2557</u> OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the resilience of critical entities and repealing Council Directive 2008/114/EC [1] states (Art 15-Incident notification) that:

"Member States shall ensure that critical entities notify the competent authority, without undue delay, of incidents that significantly disrupt or have the potential to significantly disrupt the provision of essential services. Member States shall ensure that, unless operationally unable to do so, critical entities submit an initial notification no later than 24 hours after becoming aware of an incident, followed, where relevant, by a detailed report no later than one month thereafter". The notifications will include information for:

- "(a) the number and proportion of users affected by the disruption;
- (b) the duration of the disruption;
- (c) the geographical area affected by the disruption, taking into account whether the area is geographically isolated."

In the Directive 2022/2557 [1], it is also clearly mentioned that "Where an incident has or might have a significant impact (3.10) on the continuity of the provision of essential services to or in six or more Member States, the competent authorities of the Member States affected by the incident shall notify the Commission of that incident".

Currently, in case of an emergency incident, there is no standardised type and content of information to be sent from a critical infrastructure to a nationally designated contact point for critical entities. A standardised description with specific fields of incidents dedicated to critical infrastructures would help to support the response to the incident and the restoration of services.

Some standardised references focus on the transmission of data or alerts while incident reporting is used mainly as a situation reporting for various cases, and not for critical infrastructures.

ISO/TR 22351:2015 [2] provides a technical schema for exchanging messages mainly between first responders' organizations while OASIS-EDXL [3] standards are technical standards which focus on providing alert messages or situation report messages that could fit a variety of situations but not specifically used for incident reporting for critical infrastructures.

Also, the M/ETHANE [4] model is a framework developed by JESIP (Joint Emergency Services Interoperability Principle) that provides a common structure for first responders and relevant control rooms to share information related to incidents, and in the end could be used for incidents related to critical infrastructures as well.

This document is designed to be used in cases where incidents occur to critical infrastructures in informative Annex A.

In this document, the following verbal forms are used:

- "shall" indicates a requirement;
- "should" indicates a recommendation;
- "may" indicates permission;
- "can" indicates a possibility or a capability.

Information marked as "NOTE" is for guidance in understanding or clarifying the associated statements or requirements. 'Notes to entry' used in clause 3 provide additional information that supplements the terminological data and can contain provisions relating to the use of a term.

# 1 Scope

This document provides requirements and recommendations for a common set of information, datatypes and terms to be reported and provided by affected critical infrastructures to national or local coordination centres or control rooms of emergency services or competent authorities. Then coordination centres can share this information with other emergency authorities and other critical infrastructures in case of an emergency incident.

This information sharing aims at the higher command levels, i.e., strategic and operational (FEMA 2010, [5]) of crisis management and response. It is not aimed at the tactical level (forces on scene).

The incident information defined in this document is structured in a way to provide to the personnel responsible for responding to such incidents, the necessary and sufficient information that will help them to understand the severity of the incident and its potential consequences, easily and rapidly.

Recommendations for displaying this information on a computer screen or printing in a usual paper format are also provided in Annex B (informative).

In addition, the incident information could be used in order for competent authorities to maintain statistics on incidents affecting critical infrastructures.

This document does not aim to provide a technical schema for the information shared between organisations or systems but to recommend the structure and on the necessary information for incident reporting and notification. In addition, this document provides recommendations on how to create a printed or a pc-screen template of the incident report in order for the targeted audience to get easily an insight of the situation.

The intended users of this document are security liaison officers of critical infrastructures, public administration, coordination centres, first responders' control rooms and first responders of a higher command level.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

# 3 Terms and definitions

For the purpose of this document, the following terms, definitions, and abbreviations apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at http://www.iso.org/obp
- IEC Electropedia: available at <a href="http://www.electropedia.org/">http://www.electropedia.org/</a>

#### 3.1

# cancel report

report when the *event* (3.7) has been cancelled, for any reason, by the CI (3.3)

#### 3.2

#### crisis

unstable condition involving an impending abrupt or significant change that requires urgent attention and action to protect life, assets, property or the environment

[SOURCE: ISO 22300:2021, 3.1.60]

#### 3.3

#### critical infrastructure(s)

CI(s)

asset, system, or part thereof, which is essential for the maintenance of vital societal functions, health, safety, security, economic or social well-being of people, where the *disruption* (3.4) or destruction of which would have a significant *impact* (3.10) in a society as a result of the failure to maintain those functions

[SOURCE: EN 17483-1:2021, 3.1]

#### 3.4

#### disruption

*incident* (3.11), whether anticipated or unanticipated, that causes an unplanned, negative deviation from the expected delivery of products and services according to an organisation's objectives

[SOURCE: ISO 22300:2021, 3.1.75]

#### 3.5

#### elevation

vertical distance of a point or a level, on or affixed to the surface of the earth, measures from mean sea level

[SOURCE: ICAO/Annex 4]

[SOURCE:ISO 23639-7:2012(en), 3.4]

## 3.6

#### emergency

sudden, urgent, usually unexpected occurrence or event (3.7) requiring immediate action

Note 1 to entry: An *emergency* (3.6) is usually a *disruption* (3.4) or condition that can often be anticipated or prepared for, but seldom exactly foreseen.

[SOURCE: ISO 22300:2021, 3.1.87]

#### CWA 18023:2023 (E)

#### 3.7

#### event

occurrence or change of a particular set of circumstances

Note 1 to entry: An *event* (3.7) can be one or more occurrences and can have several causes and several consequences.

Note 2 to entry: An *event* (3.7) can also be something that is expected which does not happen, or something that is not expected which does happen.

Note 3 to entry: An event (3.7) can be a risk source.

[SOURCE: ISO 31000:2018, 3.5]

#### 3.8

## final report

report that is sent when an incident (3.11) is finalised and services have been restored

#### 3.9

#### first responder

individual who is authorized, trained and qualified to provide primary response in an *emergency* (3.6), disaster or *crisis* (3.2)

Note 1 to entry: Included, but not limited to, fire departments, rescue squads, *emergency* (3.6) medical personnel, law enforcement personnel, and in some instances military personnel where the personnel are trained in assessing and treating injuries.

[SOURCE: ISO 17840-2:2019(en), 3.1- Modified eliminating 'to victims of traffic accident, fire or submersion' to make more general and adapted including 'in an *emergency* (3.6), disaster or *crisis* (3.2)']

#### 3.10

#### impact

outcome of a disruption (3.4) affecting objectives

[SOURCE: ISO 22300:2021, 3.1.118]

#### 3.11

## incident

event (3.7) that can be, or could lead to, a disruption (3.4), loss, emergency (3.6) or crisis (3.2)

[SOURCE: ISO 22300:2021, 3.1.122]

Note 1 to entry: The unique identification of *incident* (3.11) is expressed as 'incident (3.11) ID' in this document.

#### 3.12

#### incident certainty

confirmation level of the *incident* (3.11), as provided by the *CI* (3.3) operator and/or security liaison officer

#### 3.13

# incident priority

information related to priority that should be given by *first responders* (3.9) for response actions expressed in specific levels

#### 3.14

#### incident severity

measure of the possible consequences of the *incident* (3.11) expressed in specific levels

Note 1 to entry: Definition derived from ISO/IEC Guide 63:2019, 3.17 severity.

#### 3.15

#### incident urgency

level of *incident* (3.11) importance related to responsive actions that should be taken in a given time frame

#### 3.16

#### initial report

report sent by the CI (3.3) when the *incident* (3.11) occurs and new information regarding an *incident* (3.11) or activity is reported

#### 3.17

# recovery time objective

#### RTO

period of time following an *incident* (3.11) within which a product and service or an activity is resumed, or resources are recovered

Note 1 to entry: For products, services and activities, the RTO is less than the time it would take for the adverse *impacts* (3.10) that would arise as a result of not providing a product/service or performing an activity to become unacceptable.

[SOURCE: ISO 22300:2021, 3.1.203]

#### 3.18

# update report

report that provides updates information superseding or complementing the *initial report* (3.16)

# 4 The incident report

#### 4.1 General

The structure of the incident (3.11) report as well as the set of information items, one by one, that shall be included in the set of information sent are described.

NOTE When applicable, the report could be used for cyber and non-cyber incidents (3.11), as well as to combinations of incidents (3.11).

Besides the structure, the information that is used also refers to:

- an initial report (3.16) sent with the incident (3.11) occurrence (initial report, 3.16);
- an updated report with the aim to update the information related to the incident (3.11) (update report, 3.18);
- a report which aims to provide information related to the restoration of service (recovery time objective, 3.17) and closing of the incident (3.11) (final report, 3.8); and
- a fourth type of report, for cases that the incident (3.11) has been cancelled (cancel report, 3.1).

# 4.2 Structure of the incident report

The incident (3.11) report form contains various information ranging from the type of information necessary to identify the person that fills it in and some contact details that could be valuable during an *emergency* (3.6), to more detailed information that could be useful for other organisations and the continuation of the provided services.

The following sections shall be included in the incident (3.11) report:

- (a) user and incident (3.11) identifier,
- (b) incident (3.11) description, and
- (c) risk and impact (3.10) description.

Additionally, the following information should be included in the incident (3.11) report, if considered necessary:

- (a) actions, and
- (b) resources.

#### 4.2.1 User and incident identifier

The person or group of persons responsible for reporting the identified incident (3.11) shall provide the set of information and data through which the organisation and person or group of persons responsible for reporting the incident (3.11) are identified. This shall include contact details and key information about the incident (3.11).

NOTE In all the document the required/recommended information in the incident (3.11) report will be completed by a person or group of persons (team). To simplify the text 'person' is included referring to one person or the whole team responsible.

#### 4.2.2 Incident description

The person responsible for reporting the incident (3.11) shall describe the incident (3.11) occurrence with the following information:

- date, time and location;
- confidence level of the information shared (certainty);
- the area, geographical data and accessibility to the location of the incident (3.11); and
- high level description of the incident (3.11) in a free text format.

The high level description should also include, briefly, information such as the cause of the incident (3.11), essential functions and systems affected by the event (3.7), threat and source of threat, if known, estimations of the impact (3.10), actions taken in place and potential resources needed.

# 4.2.3 Risk and impact description

The person responsible for the incident (3.11) notification and report shall provide the following information related to the incident (3.11):

- the hazards and threats;
- potential casualties; and

— the impacts (3.10) to the CI (3.3) and the services provided to other interconnected CIs (3.3), and to society (i.e., citizens, area, environment, etc.).

These are considered to be estimations, at least for the incident (3.11) initiation (initial report (3.16)), while for the other report types these should be based on observations and the final outcome of the incident (3.11) (see 4.3.2). Also, in this section, information such as security related aspects that may have been affected, such as, availability, integrity, safety, confidentiality, environmental issues, detected vulnerability should be mentioned, if known.

#### 4.2.4 Actions

The person responsible for the notification and reporting should provide information related to the actions and measures that the CI (3.3) has taken to restore the services and to minimize the impacts (3.10).

The aim is to improve situation awareness for emergency (3.6) and first responders' (3.9) services. The CI (3.3) operator should fill in this section with the goal that it is an additional support for the emergency (3.6) services in order to understand the current situation.

In relation with 4.2.5, this information will support the processes for the mobilisation of the proper emergency (3.6) response forces (types and amounts of units).

#### 4.2.5 Resources

The person responsible for reporting incidents (3.11) should provide information related to the resources currently used by the CI (3.3) and any necessary additional resources.

# 4.3 Content of the incident report

The incident (3.11) report is meant to be sent by the CI (3.3) and more specifically by the infrastructure security liaison officer or the infrastructure operator (person or group of persons).

The recipients are the coordination centre of a competent authority that monitors and supervises CIs (3.3) or an emergency (3.6) control room of first responders' (3.9) organisations.

The content of the report may be different according to the report type (see 4.1). For the initial report (3.16), it is considered that estimations are provided; for update and especially for the final report (3.8) of an incident (3.11) the observations should be sent, if possible.

The information to be sent is presented in 4.3.1 while 4.3.2 includes the discrimination of that information based on the report type.

# 4.3.1 Set of information sent

The information is clustered according to the structure described in Clause 4.2.

# 4.3.1.1 User and incident identifier

# 4.3.1.1.1 Incident report type

This sub-clause describes the four different report types. The person responsible to send the report shall provide information on the report type. The following options shall be selected:

- Initial report (3.16).
- Update report (3.18).
- Final report (3.8).

#### CWA 18023:2023 (E)

Cancel report (3.1).

NOTE 1 These options are similar and can be matched to the various options used in OASIS EDXL-SitRep standard [3] and ISO/TR 22351:2015-EMSI [2].

#### 4.3.1.1.2 Incident ID

This information is used for identifying the incident (3.11) in various databases. In case the report is done through an automatic system, a unique identifier shall be given automatically by the system.

This set of information shall be filled in by the person or system responsible for reporting the incident (3.11).

When an automatic number is provided, it shall be confirmed by the person or system responsible for reporting the incident (3.11).

The incident (3.11) ID format shall remain constant.

The following text structure includes the ID format that should be used:

XXXX - YYYYMMDD - NN - T

where

XXXX is the CI name in 4 letters.

YYYYMMDD is the date.

N is the number of the event (3.7), (e.g. 01 or 99).

T is the first letter of the report type:

R for initial report (3.16).

U for update report (3.18).

F for final report (3.8).

C for cancel report (3.1).

## 4.3.1.1.3 Report recipients

This information is referred to the organisations that will receive the report of the incident (3.11). This set of information provides some options to whom the CI (3.3) operator or security officer may send the report. This also supports the coordination procedure as any organisation that receives the report is aware instantly for other organisations that have been notified.

The national and EU legislation, organisational structures and procedures should be taken into account in preparation of the potential recipients.

For informative purposes, a non-exhaustive list of potential recipients, public or private entities, is provided below:

- NCIP: National Contact Point for CIs (3.3).
- Police authorities.
- Fire Service.
- Medical emergency (3.6) services.
- Civil protection.
- Coastguard.

- Municipalities.
- Prefectures.
- Agricultural agencies.
- Environmental agencies.
- Other: this option includes other critical entities or any other organization that could be useful in resolving the crisis (3.2).

NOTE For example, 'other' can include CIs' operators in the exchange trail of information, relevant cooperation communication entities (laboratories for analytical sampling support), relevant industries/business close to the affected area/incident for evacuation, fire response activation, etc.

#### 4.3.1.1.4 Linked incident

This information provides the necessary input for the correlation of the reporting incident (3.11) to another one registered and should be given by the person responsible to send the report. The following options shall be selected, if known:

- Yes.
- No.
- Unknown.

#### 4.3.1.1.5 Linked incident ID

This information is an identification of the linked incident (3.11) and is requested mainly to be used for storage in systems and databases. This linked incident (3.11) ID should be sent only in the case that there is a link between various incidents (3.11) and the person sending the report is aware of such an incident (3.11). If there is such information, the linked incident (3.11) ID shall follow 4.3.1.1.2.

In case there is no linked incident (3.11), no information should be sent.

# 4.3.1.1.6 Incident report creation date and time (local)

The date and time when the incident (3.11) report was created shall be provided, expressed in local time, and not when the incident (3.11) occurred.

The following schema shall be followed:

YYYY-MM-DD Thh:mm:ss (Local date and time) [following ISO 8601-1:2019]

NOTE If a specific tool is considered to be used as the means to populate such a report, then this set of information could be filled in automatically by the system. Local date and time can be used for printed versions, or forms presented in a pc screen.

# 4.3.1.1.7 Incident report creation date and time (UTC)

The date and time when the incident (3.11) report was created and not when the incident (3.11) occurred in UTC shall be provided. UTC date and time should be the main time used in databases or other software tools.

The following schema shall be followed:

YYYY-MM-DD Thh:mm:ss (Date and time are in UTC) [following ISO 8601-1:2019]

NOTE If a specific tool is considered to be used as the means to populate such a report, then this set of information could be filled in automatically by the system.

#### 4.3.1.1.8 Critical infrastructure business name

The person responsible for reporting incidents (3.11) shall declare the official business name of the CI (3.3) or at least a widely known abbreviation of the critical entity.

#### 4.3.1.1.9 Critical infrastructure sector

The person responsible for incident (3.11) reporting shall provide information on the type of the CI (3.3). The list of critical entities mentioned in the Directive EU 2022/2557 [1] should be used (see A.2.). Nevertheless, other classification systems of CIs (3.3) and entities are not excluded.

### 4.3.1.1.10 Person/group reporting

This set of information describes the name or the position of the person or group of persons (team) responsible for the contact and reporting, e.g., security liaison officer or the infrastructure operator and shall be given to the competent authorities.

#### 4.3.1.1.11 Person authorized

This set of information should be provided and describes the position of the person responsible for the contact and reporting, e.g., security liaison officer or the infrastructure operator.

NOTE This type of information could be set automatically in case the report is completed through a software or a dedicated computer tool.

# 4.3.1.1.12 Contact details/telephone number

The telephone number (landline or cell phone) shall be communicated to the competent authorities. It includes the telephone number with country telephone code.

NOTE This type of information could be set automatically in case the report is completed through a software or a dedicated computer tool.

## 4.3.1.1.13 Contact details/email

The email address of the person responsible for reporting emergency (3.6) incidents (3.11) shall be shared with the competent authorities.

NOTE This type of information could be set automatically in case the report is completed through a software or a dedicated computer tool.

#### 4.3.1.1.14 Country (code)

This describes the country where the incident (3.11) occurred and consequently the country where the CI (3.3) is located. The person reporting should provide information on the country the incident has happened.

In case this is done, this information shall be provided according to ISO 3166-1:2020.

NOTE 1 This type of information could be set automatically in case the report is completed through a software or a dedicated computer tool.

NOTE 2 The country codes in ISO 3166-1 and their definition can be consulted in the ISO Online Browsing Platform (BOP) available at <a href="http://www.iso.org/obp">http://www.iso.org/obp</a>

# 4.3.1.2 Incident detailed description

The following subclauses are related to the necessary information for the incident (3.11) description that identifies the date, time and location of the incident (3.11) as well as a short description of the incident (3.11), and the persons responsible to send the report that shall provide this information.

# 4.3.1.2.1 Incident occurrence date and time (local)

The date and time that the incident (3.11) occurred in local time shall be provided following the ISO 8601-1:2019 format:

— YYYY-MM-DD, Thh:mm:ss (Local date and time) [following ISO 8601-1:2019]

NOTE If a specific tool is considered to be used as the means to populate such a report, then this set of information could be filled in automatically by the system. Local date and time can be used for printed versions, or the ones presented in a pc screen.

# 4.3.1.2.2 Incident occurrence date and time (UTC)

The date and time that the incident (3.11) occurred in UTC time shall be provided following the ISO 8601-1:2019 format.

— YYYY-MM-DD, Thh:mm:ss (Local date and time) [following ISO 8601-1:2019]

NOTE If a specific tool is considered to be used as the means to populate such a report, then this set of information could be filled in automatically by the system.

## 4.3.1.2.3 Incident certainty

This type of information shall be used in a way that represents as far as possible the confidence level of incident (3.11) command for report accuracy of current situation, ranging from simple hypotheses to real observations. Incident certainty (3.12) should be directly related to the overall impacts (3.10) of the incident (3.11), if possible, and not necessarily to the incident (3.11) itself. From the moment that a security liaison officer or the CI (3.3) operator makes use of such a report, the incident (3.11) is considered as a true and confident event (3.7). Thus, confidence should be related to impacts (3.10).

In order to be aligned and interoperable with other international standards, the options of OASIS EDXL-SitRep [3] shall be used as reference:

- HighlyConfident: is the topmost level of confidence. For the purposes of this CWA, this must be used for validated (real) observations.
- SomeWhatConfident: corresponds to a medium level of confidence and must be used when the details of the incident (3.11) and specifically of the impacts (3.10) are estimations.
- Unsure: corresponds to a low confidence level and must be used when the details of the incident (3.11) and specifically of the impacts (3.10) are estimations.
- NoConfidence: corresponds to information that has not been verified in any extent. It is suggested not to use this option for cancellation of previous events (3.7).

NOTE For the estimations, it is up to person responsible for the reporting to select which type of option to use based on their experience, expertise and available information.

# 4.3.1.2.4 Area (geographic)

The person reporting shall provide the name of the (broader) area in which the affected CI (3.3) is located and/or the incident (3.11) occurred.

## 4.3.1.2.5 Geographic coordinates

The geographical coordinates of the affected CI (3.3) shall be in WGS 84 (EPSG:4326).

This could be directly selected through a map in case of the availability of a technical reporting tool.

Latitude and longitude are considered to be the centre point of the affected infrastructure, building, incident (3.11) or area and shall be provided.

Elevation (3.5), radius and polygon should be provided, if possible.

Radius and polygon should support the fact of knowing an affected area and not a single point.

- Latitude.
- Longitude.
- Elevation (3.5): provide the elevation (3.5) of the site in meters, if known or available.
- Radius: provide a distance around the centre point that define an area, if known or available. Distance should be provided in meters. Nevertheless, other measurement units may be used but the person reporting shall denote the measurement unit as well. In case, no measurement unit is clearly denoted, then the number representing radius is considered to be in meters.
- Polygon: provide geographic coordinates that define a polygon of the affected area, if known or available. Polygon measurement is a sequence of latitude-longitude coordinates, must be non-selfintersecting, finishing with the same point as the start.

NOTE In case a computer tool is used for the reporting this information could be selected through a mapping application.

#### 4.3.1.2.6 Incident description

A brief description of the incident (3.11) (what happened) shall be provided in a free text format. The operator shall describe briefly not only the incident (3.11) but also what has been affected, e.g., earthquake occurrence, central pipeline damaged, service interrupted. Potential consequences in the form of materialization of other threats should also be described, if possible. Also, brief information about people or personnel affected shall be given, if known.

# 4.3.1.2.7 Accessibility status

The person reporting should briefly provide the status of access and/or evacuation routes (land, sea, air). Provide specific information on routes that are not accessible, if known, and anything considered important or necessary for first responders (3.9) to approach and/or evacuate. First responders (3.9) should be aware of the situation before responding. Specifically, the infrastructure operator should provide information about accessibility of the main and secondary access to and from the infrastructure location, if possible. In addition, information related to the size of vehicle that can approach the location should be provided.

#### 4.3.1.3 Risk and impact description

The following subclauses provide more detailed information on the incident (3.11) occurrence and the impacts (3.10) and consequences to the CI (3.3) itself and other interconnected CIs (3.3), to society and the environment.

# **4.3.1.3.1** Incident type

The user shall provide information whether the incident (3.11) reported is a true incident (3.11) or a potential threat as the reporting could be used for threats and not on real incidents (3.11). The following values shall be used:

- Minor level threat.
- Moderate level threat.
- High/critical level threat.
- True incident (3.11).

#### **4.3.1.3.2** Hazard type

The person reporting shall provide the information on the hazard type that caused the incident (3.11). This set of information is a free text.

Widely accepted terms shall be used, for example, in an earthquake incident (3.11), the hazard could be a single word: "earthquake" or "seismic event". Avoid other, more simplified, terms such as "quake".

Annex C (informative) includes an indicative table of the OASIS Event Terms [6] (see C.2) that can be used, if appropriate.

#### 4.3.1.3.3 Incident severity

This set of information provides an overview of the severity of the incident (3.11) from the perspective of the CI (3.3) and should be provided by the person sending the report. If the incident type is characterized as a threat, then the incident severity (3.14) shall be estimated based on the type of the threat as being a real incident (3.11). The options available to the OASIS EDXL-SitRep shall be used.

In cases when no information regarding the severity of the incident (3.11) is available or not able to be estimated, the option "Unknown" shall be selected.

- Extreme.
- Severe.
- Moderate.
- Minor.
- Unknown.

## 4.3.1.3.4 Incident urgency

Incident urgency (3.15) from the perspective of the CI (3.3) should be provided. CI (3.3) reporting person should fill this information based on the overall knowledge for the incident (3.11).

#### CWA 18023:2023 (E)

According to ISO/TR 22351:2015 [2] incidents (3.11) are distinguished between urgent and not urgent. Based on the open OASIS EDXL-SitRep [3] urgency is related to actions that should or not be taken immediately. Level of urgency should be in line with the respective priority and severity.

The following values adopted from OASIS EDXL-SitRep [3] should be used:

- Immediate Responsive actions should be taken immediately.
- Expected Responsive actions should be taken within the next hour.
- Future Responsive actions should be taken in the near future.
- Past Actions to respond are no longer required.
- Unknown.

# 4.3.1.3.5 Incident priority

This set of information targets first responders (3.9) and other CIs (3.3) in order to provide them with information relevant to situational awareness. CI's (3.3) operator should provide this information in relation to urgency and severity, based on the options provided in ISO/TR 22351:2015 [2], in order to enhance interoperability with other standards.

This information should be provided to the extent possible at the time of the reporting. One of the following options should be selected:

- Priority not assessed.
- No estimated priority for mission accomplishment.
- Minor priority to mission completion due to no aggravation.
- Standard priority due to possible limited aggravation in absence of mission accomplishment.
- Critical priority due to possible fatal worsening without mission accomplishment.
- Extremely critical priority due to possible fatal mass worsening without mission accomplishment.

# 4.3.1.3.6 Description of impacts

The CI (3.3) operator/security liaison officer shall use this set of information to describe in a free text format the impacts (3.10) related to the incident (3.11) and provide more details than the "Incident description" in 4.3.1.2.6.

Here, the responsible person shall describe any unplanned deviations from the usual service provision.

The user(s) shall describe not only the disruption (3.4) of service but also the consequences inside the stricken CI (3.3). Information such as the status of services, the type of damage, mechanical, structural or other damage (inside or outside the CI (3.3)) shall be described.

EXAMPLE If a leak of a CBRN agent has been occurred, the type of the substances, the type of the leak (in the water, in the air or in the soil) has been observed.

Depending on the incident (3.11) form type (see 4.3.1.1.1) the impact (3.10) is either estimated or observed. These impacts (3.10) can be anticipated or unanticipated.

#### 4.3.1.3.7 Scale of impacts

This information shall be provided from the CI (3.3) even if it is an estimation at the time of the reporting. It shall consider the above provided information. For this, the following impact (3.10) levels options from the EDXL-SitRep shall be used in order to facilitate the process:

- Unknown.
- No damage.
- Minor.
- Moderate.
- Large.
- Massive.

#### 4.3.1.3.8 Critical Infrastructure service affected

The person responsible to fill in and send the report shall, briefly, describe the service that has been or will be affected.

#### **4.3.1.3.9 Human losses**

This information shall be related to direct and indirect impact (3.10) to the population (internal and external to the infrastructure) due to the incident (3.11). CI (3.3) operators or security liaison officers shall provide information regarding the casualties related to their jurisdiction or their immediate nearby locations for which they are aware of. In case there is no information, the option "Unknown" shall be selected.

NOTE Applicable relevant regulation must be considered in order to provide this information to the national competent authority or any other organization responsible to receive the reports.

Primarily, and especially in the initial report (3.16) this shall be considered as an estimation. In the final report (3.8) (incident (3.11) terminated and service restored) this information should be related to the real circumstances.

The user should follow the OASIS EDXL-SitRep "Casualty & illness element" [3] options as most appropriate for the purposes of this document. The following options are proposed, not being exhaustive:

- Fatalities number of fatalities.
- Hospitalized number of persons hospitalized.
- Injured number of injured.
- In need of rescue number of persons in need of rescue.
- Missing number of missing persons.
- Evacuated number of persons evacuated from the incident (3.11) scene.
- Sheltered in Place number of persons sheltered in place of incident (3.11).
- In temporary shelters number of persons transferred to temporary shelters.

#### CWA 18023:2023 (E)

- Quarantined number of persons in quarantine due to the incident (3.11).
- Unknown if there is no information at all about human loss, then this option may be used.
- Not applicable in case this is not applicable for the infrastructure, then this option must be selected.

Alternatively, if the above information is difficult to be used by the person reporting, then one of the most common triage system (START – Simple Triage And Rapid Treatment, 1983, [7]) should be used:

- P1 number of injured people requiring immediate care.
- P2 number of injured people requiring delayed care.
- P3 number of injured people requiring minimal care.
- Dead number of dead people (if any).
- Unknown.

#### 4.3.1.3.10 Affected animals

This type of information relates to estimations for the initial report (3.16) and observations for update or final report (3.8). Information should be provided per species or group of animals. If no information is available, then the option "Unknown" should be selected. The options that could be provided are presented below, as example:

- Fatalities (number of animals per species)
- Injured (number of animals per species)
- In need of rescue (number of animals per species)
- Evacuated (number of animals per species)
- Quarantined (number of animals per species)
- Unknown

#### 4.3.1.3.11 Expected external impacts (impacts to other critical infrastructures)

This information should be related to any knowledge or estimation of the impacts (3.10) of the incident (3.11) to other interconnected CIs (3.3). Potential disruption (3.4) of the services of other infrastructures could be mentioned, or any other detail that could be useful to assess the situation. This information is based on estimations, for all types of reports. In the closing report of the incident (3.11), the operator may declare according to his/her knowledge any potential impacts (3.10) to other CIs (3.3), if known. The user should provide this information in a free, narrative text format.

#### 4.3.1.3.12 Recovery time objective

This information is related to estimations, mainly for the initial report (3.16) of the incident (3.11), from the CI (3.3) regarding the restoration time of the service affected. This is a free text set of information. The CI (3.3) operator shall provide information on when the service or a specific percentage of the service will be restored, expressed either on specific date and time or an extent of the time. For example, the operator shall provide a wording such as: "Service fully restored in the next 2 hours" or "Service restored"

to 50% of the users in the next 12 hours" or "service restored at YYYY-MM-DD, Thh:mm:ss (Local date and time)".

# 4.3.1.3.13 Additional vulnerabilities

This set of information is a free text format, and the operator should describe any additional impacts (3.10) or vulnerabilities not the infrastructure itself or other infrastructures, but to the environment, animals, plants and other relevant stakeholders.

In addition, and if possible, the operator should indicate prominent vulnerabilities in an affected population, such as the likely presence of high numbers of elderly, young, hospitalised, disabled, or incarcerated people, as well as unusually high concentrations of people. This information should be in accordance with any information given in 4.3.1.3.9 and 4.3.1.3.10.

#### 4.3.1.4 Actions

Basic actions taken by the CI (3.3) in order to minimize the impacts (3.10) of the incident (3.11) should be provided by the CI (3.3).

# 4.3.1.4.1 Specific actions already in place

- Yes.
- No.
- Will be initiated immediately.

#### 4.3.1.4.2 Alternative infrastructure in place for same service provision

The user should select among the following options:

- Another unit internally from the same operator.
- Other operator via collaboration.
- No.
- Not applicable.

NOTE: If an alternative provider has been allocated, then the operator should provide the name of the alternative entity in the above options.

# 4.3.1.4.3 Description of the actions

Briefly describe the necessary actions taken or the ones that will be taken to minimize the impacts (3.10) of the incident (3.11). The person reporting this information should provide it in a free, narrative text format.

#### 4.3.1.5 Resources

The basic information related to the resources used by the CI (3.3) should be provided. Detailed request of resources is out of the scope of this CWA. For such type of request, the ISO/TR 22351 [2] or the open OASIS EDXL-Resource Messaging (EDXL-RM) [8] technical standards can be used.

# 4.3.1.5.1 Resources used by the critical infrastructure

The type and number of resources used to minimize the impacts (3.10) of the incident (3.11) should briefly mentioned.

# 4.3.2 Set of information based on the report type

The information sent for the case of update, final or cancellation of the incident (3.11) is mainly the same as in the incident (3.11) initiation report. It is up to the person in charge to fill in the necessary information that will provide update for situation awareness purposes or for the finalisation or cancellation of the incident (3.11) and the restoration for services. Nevertheless, some of the information that is required for the report (initial incident (3.11) report) can be exactly the same or without any difference for the update, the finalisation or cancellation type.

EXAMPLE Information such as the incident (3.11) occurrence date and time or incident priority (3.13) are not necessarily important or without any use for the update or cancellation type, especially when the reporting is made through a computer software and not by hand.

Thus, Table 1 resumes the various information that is required and recommended for the four incident (3.11) report types.

Table 1 — Characterisation of type of information based on the report type

| Incident report type                                       | Initial | Update | Final | Cancel |
|--|---------|--------|-------|--------|
| Incident ID (4.3.1.1.2)                                    | a, d    | a, d   | a, d  | a, d   |
| Report recipients (4.3.1.1.3)                              |         | b      | С     |        |
| Linked incident (4.3.1.1.4)                                |         | b      | С     | С      |
| Linked incident ID (4.3.1.1.5)                             | a       | b      | с     | С      |
| Incident report creation date and time (local) (4.3.1.1.6) | a, d    | b, d   | c, d  | c, d   |
| Incident report creation date and time (UTC) (4.3.1.1.7)   | a, d    | b, d   | c, d  | c, d   |
| CI business name (4.3.1.1.8)                               | a, d    | b, d   | c, d  | c, d   |
| CI sector (4.3.1.1.9)                                      | a, d    | b, d   | c, d  | c, d   |
| Person/group reporting (4.3.1.1.10)                        | a, d    | b, d   | c, d  | c, d   |
| Person authorized (4.3.1.1.11)                             | a, d    | b, d   | c, d  | c, d   |

| Incident report type                                  | Initial | Update | Final | Cancel         |
|---|---------|--------|-------|----------------|
| Contact details /<br>telephone number<br>(4.3.1.1.12) | a, d    | b, d   | c, d  | c, d           |
| Contact details / email (4.3.1.1.13)                  | a, d    | b, d   | c, d  | c, d           |
| Country (code)<br>(4.3.1.1.14)                        | a, d    | b, d   | c, d  | c, d           |
| Incident occurrence date and time (local) (4.3.1.2.1) |         | b      | С     | Not applicable |
| Incident occurrence date and time (UTC) (4.3.1.2.2)   | a       | b      | С     | Not applicable |
| Incident certainty (4.3.1.2.3)                        |         | b      | С     | Not applicable |
| Area (geographic)<br>(4.3.1.2.4)                      |         | b      | С     | Not applicable |
| Geographic coordinates (4.3.1.2.5)                    |         | b      | С     | Not applicable |
| Incident description (4.3.1.2.6)                      |         | b      | с     | С              |
| Accessibility status (4.3.1.2.7)                      |         | b      | с     | Not applicable |
| Incident type (4.3.1.3.1)                             |         | b      | С     | Not applicable |
| Hazard type<br>(4.3.1.3.2)                            |         | b      | С     | Not applicable |
| Incident severity (4.3.1.3.3)                         |         | b      | С     | Not applicable |
| Incident urgency (4.3.1.3.4)                          |         | b      | С     | Not applicable |
| Incident priority (4.3.1.3.5)                         |         | b      | с     | Not applicable |
| Description of impacts (4.3.1.3.6)                    |         | b      | с     | Not applicable |
| Scale of impacts (4.3.1.3.7)                          |         | b      | С     | Not applicable |
| CI service affected (4.3.1.3.8)                       |         | b      | С     | Not applicable |
| Human Losses<br>(4.3.1.3.9)                           |         | b      | С     | Not applicable |

| Incident report type   | Initial | Update | Final | Cancel         |
|--|---------|--------|-------|----------------|
| Affected animals (4.3.1.3.10)  |         | b      | с     | Not applicable |
| Expected external impacts (4.3.1.3.11)                                     |         | b      | С     | Not applicable |
| Recovery time objective (4.3.1.3.12)                                       |         | b      | С     | Not applicable |
| Additional vulnerabilities (4.3.1.3.13)                                    |         |        |       | Not applicable |
| Specific actions already in place (4.3.1.4.1)                              |         | b      | С     | Not applicable |

Key

Mandatory information that is required in the relevant subclause.

Optional information that is recommended in the relevant subclause.

- In case a software or a computer tool is used for the reporting, this information can be filled in automatically.
- b In case a software or a computer tool is used for the reporting, this information can be filled in automatically based on the values of the "initial" report. If the form is pre-populated, then the user can update whatever thinks appropriate.
- c In case a software or a computer tool is used for the reporting, this information can be filled in automatically based on the values of the "update" report. If the form is pre-populated, then the user can update whatever thinks appropriate.
- d In case a software or a computer tool is used for the reporting can be pre-populated through registered and authenticated users.

# 5 Rules for designing the report

The following subclauses provide requirements, recommendations and guidelines on how to design an easy-to-read incident (3.11) report either as printed version or on a computer screen following ISO 22324:2022 for colour-coded alert when it comes to the use of colours in the incident (3.11) report.

A template of the printed version form and an example of the reports for a case study are presented in Annex B (informative).

# 5.1 Report size

It is advisable the report to be printed on a single page of a usual paper size (e.g., A4 – ISO 216:2007 [9]) or fit an average computer screen without the need for the user to scroll up or down.

#### 5.2 Fonts

According to CEN ISO/TR 22411 [10] the fonts used for the report when printed or shown as filled in, should be the Sans-Serif. The size of the fonts should be minimum 8pt. The most preferred option is 10pt. Headers can be increased by one or two points.

## 5.3 Structure

The printed version shall make clearly visible the five distinct sections covering user identifier, incident (3.11) description, incident (3.11) risk description, actions and resources as described above. The sections can be separated using thick dividing lines (e.g., 3pt lines).

#### 5.4 Headers

Headers shall stand out from the rest of the information. To fulfil this, headers shall be at least one point (1pt) larger in size than the rest of the information, and shown in bold, as proposed in 5.2, or they shall be shown in a negative contrast as in the example below.

Section headers shall use centre alignment, whereas other headers must use left alignment. Section headers must be in bold, also when using negative contrast.

| Header | or | Header |
|--------|----|--------|
|--------|----|--------|

# 5.5 Specific fields

Information reported should be depicted in a black and white style as shown in the example below:

For making the report easily readable and to focus on information that has special meaning, the following information should be depicted with specific colouring style as suggested by ISO 22324:2022:

- Incident (3.11) type.
- Incident severity (3.14).
- Scale of impacts (3.10).
- Incident urgency (3.15).
- Incident priority (3.13).
- Human losses.
- Affected animals.

Any of the three colours pallets and saturation systems provided in ISO 22324:2022 shall be followed and more specifically the various options provided in ISO 22324:2022, Table B.1.

In this document the RGB saturated version of the colours irrespective of the colour specification system is included as recommendation.

The concept behind colouring specific cells is to provide the end user a way to identify very fast incidents (3.11) with higher degree of severity. Thus, as the severity or the consequences get higher, the colours tend to be represented by red or darker combinations as proposed by ISO 22324:2022.

# 5.5.1 Incident type

The concept of providing colours on incident (3.11) type is to make faster and easily understandable by the final user. The following rules in Table 2 should apply:

| Field         | Level                         | RGB colour |
|---------------|-------------------------------|------------|
|               | Minor level threat            | 110/185/53 |
| I: J          | Moderate level threat         | 244/207/0  |
| Incident Type | High or Critical level threat | 240/140/17 |
|               | True incident                 | 199/22/30  |

 $Table\ 2-Recommendations\ on\ colours\ for\ scale\ of\ impacts$ 

# 5.5.2 Incident severity

For the incident (3.11) severity the following rules should apply. In this case, the colouring does not follow the 5 categories scale of ISO 22324:2022, but a mix of the usual three categories scale (green, yellow, red) and other colours. This has been chosen because the Severity level "Uknown" does not define specific level of severity.

Table 3 — Recommendations for the colours of incident severity level (in RGB scale, saturated) according to Table B1 in ISO 22324:2015

| Field             | Level    | RGB colour |
|-------------------|----------|------------|
|                   | Unknown  | 99/101/103 |
|                   | Minor    | 110/185/53 |
| Incident Severity | Moderate | 244/207/0  |
|                   | Severe   | 240/140/17 |
|                   | Extreme  | 199/22/30  |

# 5.5.3 Scale of impacts

For the damage extent the following rules should apply.

Table 4 — Recommendations on colours for scale of impacts

| Field            | Level         | RGB colour |
|------------------|---------------|------------|
|                  | Unknown / 0   | 99/101/103 |
|                  | No damage / 1 | 0/160/60   |
| Caala of Impacts | Minor / 2     | 110/185/53 |
| Scale of Impacts | Moderate / 3  | 244/207/0  |
|                  | Large / 4     | 240/140/17 |
|                  | Massive / 5   | 199/22/30  |

# 5.5.4 Incident urgency

For incident urgency (3.15) the following rules should apply.

Table 5 — Recommendations on colours for incident urgency

| Field            | Level     | RGB colour |
|------------------|-----------|------------|
|                  | Unknown   | 99/101/103 |
|                  | Past      | 0/160/60   |
| Incident urgency | Future    | 244/207/0  |
|                  | Expected  | 240/140/17 |
|                  | Immediate | 199/22/30  |

# 5.5.5 Incident priority

For priority options, the following rules should apply according to the recommendations of ISO/TR 22351:2015 [2].

Table 6 — Recommendations on colours for incident priority

| Field                 | Level                           | RGB colour |
|-----------------------|---------------------------------|------------|
|                       | Priority not assessed / -1      | 99/101/103 |
|                       | No estimated priority / 0       | 0/160/60   |
| In aid and Dui anitre | Minor / 1                       | 110/185/53 |
| Incident Priority     | Standard priority / 2           | 244/207/0  |
|                       | Critical priority / 3           | 240/140/17 |
|                       | Extremely critical priority / 4 | 199/22/30  |

# 5.5.6 Human losses

The following colour codes should be used for human losses, especially if the common triage method is used.

Table 7 — Recommendations for use of colours for the case of human losses, with the common triage system

| Field        | Level   | RGB colour |
|--------------|---|------------|
|              | Unknown                                       | 99/101/103 |
|              | P1 – number of people<br>immediate care       | 199/22/30  |
| Human Losses | P2 – number of people<br>urgent care          | 244/207/0  |
|              | P3 – number of people<br>delayed (minor) care | 0/160/60   |
|              | Dead  | 0/0/0      |

# 5.5.7 Affected animals

The following colour codes should be used for affected animals. The species should also be mentioned.

| Field    | Level             | RGM colour | Animal-group<br>of animals or<br>Species |
|----------|-------------------|------------|--|
|          | Unknown           | 99/101/103 |  |
|          | Injured           | 199/22/30  |  |
| Affected | In need of rescue | 240/140/17 |  |
| animals  | Quarantined       | 244/207/0  |  |
|          | Evacuated         | 0/160/60   |  |
|          | Fatalities        | 0/0/0      |  |

# **Annex A** (informative)

# List of critical infrastructure types

# A.1 General

This annex provides a list of sectors, subsectors and categories of critical entities types according to the DIRECTIVE 2022/2557 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the resilience of critical entities and repealing Council Directive 2008/114/EC [1].

# A.2 Critical infrastructure types

Table A.1 — EU Directive 2022/2557 [1] suggested list of critical entities

| Sector    | Subsector                    | Type of Entity  |
|-----------|------------------------------|---|
| Energy    | Electricity                  | Electricity undertakings which carry out the function of supply                                   |
|           |                              | Distribution system operators   |
|           |                              | Transmission system operators   |
|           |                              | Producers   |
|           |                              | Nominated electricity market operators  |
|           |                              | Electricity market participants providing aggregation, demand response or energy storage services |
|           | District heating and cooling | District heating and cooling  |
|           | Oil                          | Operators of oil transmission pipelines   |
|           |                              | Operators of oil production, refining and treatment facilities, storage and transmission          |
|           |                              | Central oil stockholding entities   |
|           | Gas                          | Supply undertakings   |
|           |                              | Distribution system operators   |
|           |                              | Transmission system operators   |
|           |                              | Storage system operators  |
|           |                              | LNG system operators  |
|           |                              | Natural gas undertakings  |
|           |                              | Operators of natural gas refining and treatment facilities  |
|           | Hydrogen                     | Operators of hydrogen production, storage and transmission  |
| Transport | Air                          | Air carriers  |
|           |                              | Airport managing bodies   |
|           |                              | Traffic management control operators providing air traffic control (ATC) services                 |

| Sector                           | Subsector | Type of Entity  |
|----------------------------------|-----------|---|
|                                  | Rail      | Infrastructure managers   |
|                                  |           | Railway undertakings  |
|                                  | Water     | Inland, sea and coastal passenger and freight water transport companies   |
|                                  |           | Managing bodies of ports including their port facilities and entities operating works and equipment contained within ports  |
|                                  |           | Operators of vessel traffic services  |
|                                  | Road      | Road authorities  |
|                                  |           | Operators of Intelligent Transport Systems  |
| Banking                          |           | Credit institutions   |
| Financial market infrastructures |           | Operators of trading venues   |
|                                  |           | Central counterparties  |
| Health                           |           | Healthcare providers  |
|                                  |           | EU reference laboratories   |
|                                  |           | Entities carrying out research and development activities of medicinal products   |
|                                  |           | Entities manufacturing basic pharmaceutical products and pharmaceutical preparations referred to in section C division 21 of NACE Rev. 2  |
|                                  |           | Entities manufacturing medical devices considered as critical during a public health emergency ('the public health emergency critical devices list')  |
| Drinking water                   |           | Suppliers and distributors of water intended for human consumption, excluding distributors for whom distribution of water for human consumption is only part of their general activity of distributing other commodities and goods which are not considered essential or important services |
| Waste water                      |           | Undertakings collecting, disposing or treating urban, domestic and industrial waste water   |
| Digital<br>infrastructure        |           | Internet Exchange Point providers   |
|                                  |           | DNS service providers   |
|                                  |           | TLD name registries   |
|                                  |           | Cloud computing service providers   |
|                                  |           | Data centre service providers   |
|                                  |           | Content delivery network providers  |
|                                  |           | Trust service providers   |
|                                  |           | Providers of public electronic communications networks or providers of electronic communications services where their services are publicly available   |

| Sector   | Subsector | Type of Entity   |
|--|-----------|--|
| Public administration                                    |           | Public administration entities of central governments  |
|  |           | Public administration entities of NUTS level 1 regions   |
|  |           | Public administration entities of NUTS level 2 regions   |
| Space  |           | Operators of ground-based infrastructure, owned, managed and operated by Member States or by private parties, that support the provision of space-based services, excluding providers of public electronic communications networks                               |
| Production,<br>processing and<br>distribution of<br>food |           | Food businesses as defined in Article 3, point (2), of Regulation (EC) No 178/2002 of the European Parliament and of the Council (22) which are engaged exclusively in logistics and wholesale distribution and large scale industrial production and processing |

# Annex B

(informative)

# Template for printed version of the incident report

# **B.1 General**

This annex provides a template structure for the information to be sent in a case of an incident (3.11) in a CI (3.3) according to the elements of Clauses 4 and 5.

A specific example for three report types (initial report (3.16), update report (3.18) and final report (3.8)) are also provided. This template is only included as a recommendation. The template fits an A4 (ISO 216:2007 [9]) paper size.

# **B.2** Example of the template structure

Table B.1 — Example for the template structure of incident reporting when printed or depicted on a computer screen

<sup>(</sup>a) For the fields of incident severity, impact description, scale of impacts, incident urgency and incident priority the colour codes in clause 5.5 should be followed.

# B.3 Example of an incident and relevant incident reports

Example of a hazard that affects a critical entity, the hypothetical scenario as well as three types of incident (3.11) reports are provided in order to present an example for demonstrating the use of this document and the printed version.

Hypothetical scenario: An earthquake occurs in Greece. The earthquake affects a large area and power, water and telecommunications service provision has stopped. The state officially announces that the earthquake is of magnitude of M=6.7 located in Southern Greece at 2022/05/10 - 15:05:10 local time. The focal depth of epicentre is estimated at 10km from the first simulations. So far, expected damage is significant based on ground motion modeling, nevertheless nothing is still verified. At this point a critical entity of water provision which is located in the area, reports a service disruption due to the earthquake. The three types of report, an initial report, an update and the closing/cancellation of the incident.

# Annex C (informative)

## List of potential hazard types

#### C.1 General

This annex provides an indicative list of event (3.7) terms that can be used for the Hazard type set of information. The table provided is the OASIS Event Terms [6]. Nevertheless, other terms that are widely accepted can be used.

#### **C.2 OASIS Event Terms list**

Table C.1 — OASIS Event Terms [6] adopted in this document

| OASIS Event Code | OASIS Event Term      | Grouping                        | CAP Category Code(s)  |
|------------------|-----------------------|---------------------------------|---|
| OET-000          | other                 | other                           | Other   |
| OET-001          | accumulating ice      | safety                          | Safety; Transport   |
| OET-002          | active shooter        | criminal activity               | Safety; Security  |
| OET-003          | administrative action | testing & system activity       | Other   |
| OET-004          | air hazard            | aviation hazard                 | Meteorological;<br>Transport                                |
| OET-005          | poor air quality      | health hazard                   | Environmental; Health                                       |
| OET-006          | stagnant air          | air hazard                      | Meteorological  |
| OET-007          | aircraft crash        | aviation hazard                 | Transport   |
| OET-008          | aircraft incident     | aviation hazard                 | Transport   |
| OET-009          | airport closure       | aviation hazard                 | Transport   |
| OET-010          | airspace closure      | aviation hazard                 | Transport   |
| OET-011          | airspace restriction  | aviation hazard                 | Transport   |
| OET-012          | ambulance             | health issue                    | Health  |
| OET-013          | animal disease        | health issue                    | Health  |
| OET-014          | animal feed           | health issue                    | Health  |
| OET-015          | animal health         | health issue                    | Health  |
| OET-016          | arctic outflow        | temperature hazard              | Meteorological  |
