

The European Semiconductor Strategy

Workshop “Trusted Chips: The Standardization Landscape & Opportunities for Europe”

2 December 2022

Colette Maloney

DG CONNECT

The EU Chips Act

“ We will present a European Chips Act...
This is not just a matter of our competitiveness.
This is also a matter of **tech sovereignty**.
– Commission President Ursula von der Leyen

Vision

To jointly create a state-of-the-art European chip ecosystem, that includes world-class research, design and production capacities

Key objectives

- strengthen **research and technology** leadership
- build and reinforce its **innovation capacity** in design, manufacturing and packaging
- put in place framework to increase substantially **production capacity** by 2030
- address the acute **skills** shortage, attract new talent
- develop mechanism to monitor **supply chain** and intervene if needed

Three pillars of the Chips Act

<https://digital-strategy.ec.europa.eu/en/consultations/european-semiconductor-value-chain-consultation>

European Semiconductor Board (Governance)

Pillar 1

Chips for Europe Initiative

- Initiative on infrastructure building in synergy with the EU's research programmes
- Support to start-ups and SMEs

Pillar 2

Security of Supply

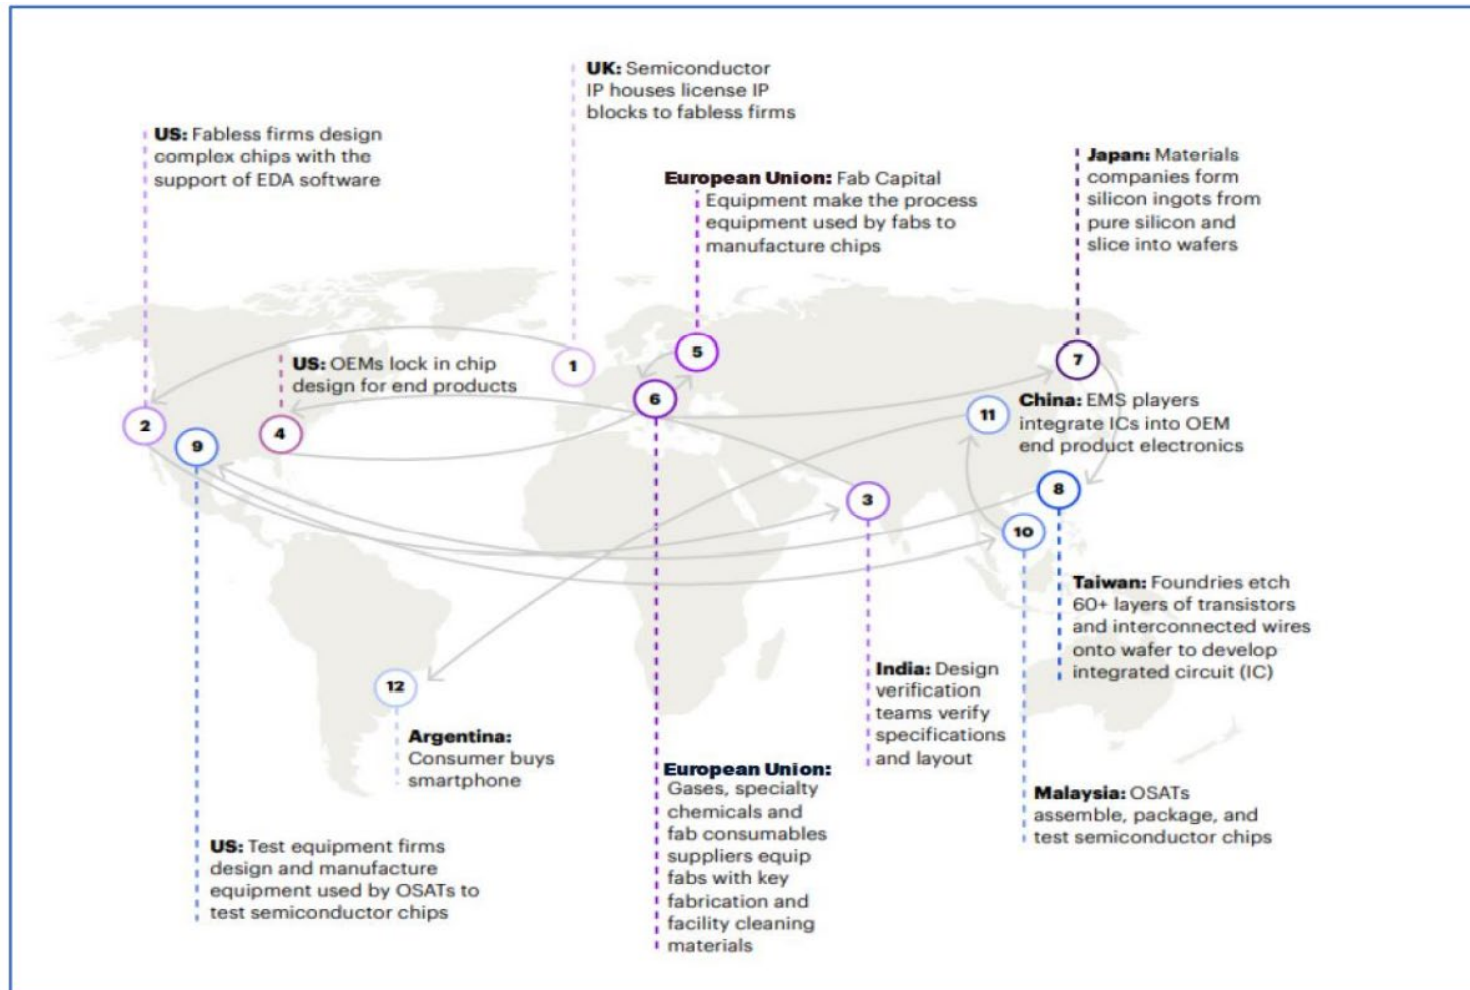

- First-of-a-kind semiconductor production facilities

Pillar 3

Monitoring and Crisis Response

- Monitoring and alerting
- Crisis coordination mechanism with MS
- Strong Commission powers in times of crisis

Trusted electronics – the need

- Complex value chain with potential threats across several steps
- Applications in several sectors (critical infrastructure, automotive etc.)
- Not just cybersecurity! Implications in the physical world (automotive, healthcare etc.)

4 Illustrative example: Global Semiconductor Supply Chain for smartphone chip (Source: Accenture. 2022)

Trusted electronics - Strands of work

Standardisation

- Grant under preparation to scan the standards landscape and identify gaps
- Call for proposals on pre-standardisation work related to the Cyber Resilience Act (CRA) proposal
- Stakeholder workshop with CENELEC on 2 December

Certification – public procurement

- Provisions of the CRA
- Identification of specific sectors and technologies with potential high social impact and respective security significance in need of certification for trusted products
- Commission, Member States, and private actors to work together on establishing common requirements for procurement

Technology development – R&D – workshop early next year with DE (BMBF)

Research on Trusted chips

Why?	<ul style="list-style-type: none">• While research on secure software has been in the EU focus, activities on trusted hardware are embryonic.
	<ul style="list-style-type: none">• Cyber Resilience Act will broadly set security requirements on digital products including hardware (microprocessors, FPGAs, microcontrollers etc.)
What?	<ul style="list-style-type: none">○ New chip design methods (incl. new security elements)
	<ul style="list-style-type: none">○ New production methods
	<ul style="list-style-type: none">○ New methods for assembly, analysis, test, measurement (e.g., chiplets)
Applications	<ul style="list-style-type: none">• Data-Communication (5G) – trade off: trust vs. latency
	<ul style="list-style-type: none">• Financial sector – trade off: trust vs. accessibility
	<ul style="list-style-type: none">• Automotive – trade off: trust vs. cost
	<ul style="list-style-type: none">• Aeronautics, defense, critical infrastructure – trust vs. certification effort
How?	Cooperative research driven by end-user needs, influencing standards and easing certification

Thank you
