

LONDON DECLARATION

CEN and CENELEC Climate Commitment

CEN and CENELEC have identified the digital and green Twin Transition as a core driver for the CEN-CENELEC Strategy 2030, recognizing that standards are a critical enabler of the solutions needed for the Green Deal transition.

The achievement of the Paris Agreement, the UN Sustainable Development Goals, and the Green Deal will require a collaborative approach at the international and European level to deliver climate-friendly standards, including complementary projects making best use of the international and European resources and networks.

Without climate compatible International and European Standards, industry and other stakeholders will be unable to achieve what is necessary at European level to help mitigate, reduce and adapt to climate change, deliver the ambitions for clean, affordable and resilient energy, support circular economy across sectors, or enable smart and sustainable mobility.

CEN and CENELEC and their Members therefore endorse the London Declaration and commit to work closely with ISO and IEC, and stakeholders and partners to ensure that International and European Standards and publications accelerate **achieving the goals of the Paris Agreement, the UN SDGs and the Green Deal**
